The CONDUCT OF LIFE—NATURE & OTHER ESSAYS
BY R.W. EMERSON

LONDON: PUBLISHED
by J.M. DENT & CO
AND IN NEW YORK
by E.P. DUTTON & CO
INTRODUCTION

The present volume of Emerson, the third from his hand to be added to this series, ranges from his first "little pamphlet," as he termed it, to his book of 1860, *The Conduct of Life*. It will be remembered that he spoke of the "Nature" pamphlet, when sending it to Carlyle in 1836, as an "entering wedge," to make an opening for a larger leverage to come. The particular force of it suggests already, indeed, the effect of the later Emersonian enginery; and Carlyle, it is almost needless to say at this late day, was quick to see how potential it was. He spoke of the book, the "little azure-coloured 'Nature,'" with a delight and a predictive faith in the writer and his future, which were a great stimulus to this transcendental naturalist. The companion work on "Spirit" that Emerson had referred to at an earlier time as one to be issued with it, seems never to have been formally worked out. We have, however, a clue to it in the seventh chapter of the "Nature" treatise; and again in the eighth, where paraphrasing (it has been supposed) some utterances of that hapless philosopher, Bronson Alcott, Emerson speaks of "the immobility or bruteness of Nature," in the absence of Spirit, and its fluidity and life when Spirit plays upon it. Dr. Edward Emerson, whose Notes make the "Centenary Edition," which he has edited, invaluable to students of his father's writings, there points out that "Nature" shows more of the formal method of the preacher than we find in any of the later essays.

Of the other papers in this volume two, those on Milton and Michael Angelo, come from the early files of the *North American Review*, where they appeared in 1837 and 1838. The Boston lecture on "War" also belongs to 1838, though it was not actually published—in the *Æsthetic Papers* edited by Mrs. Peabody—till 1849. The "Walter Savage Landor" essay is from the second volume of *The Dial*, and
the tribute to Thoreau was first delivered as an address at his funeral in 1862, and then revised and printed in the Atlantic Monthly in the succeeding year.

Of the lectures and orations, that which by right of subject follows the 1836 pamphlet and which is entitled "The Method of Nature," belongs to the year 1841. The "Lecture on The Times" belongs to the same year; while "Literary Ethics" takes us back again to 1838.

We come finally to the series of lectures which formed his book, The Conduct of Life, and which were first delivered in 1851. The book was published nine years afterwards. His English Traits, already printed in a volume of Everyman's Library, gives us the record of the strongly determining experiences that had come to his share overseas. His travel-years were comparatively late ones, but they settled his American faith the more surely, even while they enlarged his humane understanding of the Old World. He strikes the balance in these lectures:—

"I have been quoted as saying captious things about travel; but I mean to do justice. . . . All educated Americans, first or last, go to Europe; perhaps because it is their mental home, as the invalid habits of this country might suggest. . . . You do not think you will find anything there which you have not seen at home? The stuffs of all countries is just the same."

And on the other side of the scale:—

"There is in every constitution a certain solstice when the stars stand still in our inward firmament, and when there is required some foreign force, some diversion or alternative to prevent stagnation. And as a medical remedy, travel seems one of the best. . . . No doubt to a man of sense travel offers advantages. As many languages as he has, as many friends, as many arts and trades, so many times is he a man. . . . A foreign country is a point of comparison wherefrom to judge his own. One use of travel is to recommend the books and works of home—we go to Europe to be Americanised. . . ."

Emerson, himself, we are led to say, on reading The Conduct of Life, returned from Europe more firmly Americanised. The past was mainly with the Old World, the future was with the New; and he loved the future, and saw its possibilities loom big in the wide American vista.

What would we not give to have Emerson, an equivalent to the Emerson who went to Europe in Carlyle's day—he who thought and wrote and lectured in 1851 on the Californian fever of 1849 and the opening of Illinois and
the great West—speaking now on the country and its changes, and his hopes and fears for it.

"And what if Trade sow cities
Like shells along the shore,
And thatch with towns the prairie broad
With railways ironed o'er?
They are but sailing foam-bells
Along Thought's causing stream,
And take their shape and sun-colour
From him that sends the dream."

E. R.

May 1908.

The following is the complete list of his published works:

Nature, 1836; Address delivered before the Senior Class in Divinity College, Cambridge, Mass., 1838; Address in the Court-House, in Concord, Mass., 1 Aug., 1844, on the anniversary of the emancipation of negroes in British West Indies (Mass.), 1844; Essays, 1st series (Boston), 1841; Essays (preface by T. Carlyle), (Lond.), 1841; Essays, 2nd series (Boston), 1844; Man, the Reformer, a lecture, 1844 (?); The Method of Nature, an oration (Mass.), 1841; Man Thinking, an oration, 1844; Representative Men (Lectures), 1844; English Traits (Lond.), 1856; The Conduct of Life (Lond.), 1860; Books, Art, Eloquence (Mass. printed), 1877; Culture, Behavior, Beauty (Mass. printed), 1876; Letters and Social Aims (U.S. printed), 1876; Power, Wealth, Illusions (Boston, U.S.), 1876; Love, Friendship, Domestic Life (Mass. printed), 1877; Society and Solitude (Lond.), 1870; Fortune of the Republic, Lecture (Mass. printed), 1879; May-day, and other pieces (poems), (Mass. printed), 1867; Success, Greatness, Immortality (Mass. printed), 1877; The Senses and the Soul, two essays (Lond.), 1884; The Young American (Lond.), 1844; Essays, Lectures, and Orations (Lond.), 1848; Miscellanies (Mass. printed), 1876.

The Complete Works of R. W. Emerson, 2 v., 1866; 3 v., 1888-90 (Bohn's Standard Lib. 1846, etc.); Emerson's Complete Works (Ed. by J. E. Cabot), (Lond.), 1883-94; Emerson's Works (Ed. by John Morley), 6 vols. (Lond.), 1883; Complete Works (Riverside ed.), 12 vols., 1883-94; Centenary edition, Complete Works of R. W. Emerson, with a biographical introduction and notes by E. W. Emerson (New York), 1903, etc. Several lives of Emerson have appeared, including those by G. W. Cooke, 1882; O. W. Holmes, 1885; J. E. Cabot, 1887; R. Garnett, 1888.

EMERSON'S ESSAYS

NATURE

A subtle chain of countless rings
The next unto the farthest brings;
The eye reads omens where it goes,
And speaks all languages the rose;
And, striving to be man, the worm
Mounts through all the spires of form.

INTRODUCTION

Our age is retrospective. It builds the sepulchres of the fathers. It writes biographies, histories, and criticism. The foregoing generations beheld God and nature face to face; we, through their eyes. Why should not we also enjoy an original relation to the universe? Why should not we have a poetry and philosophy of insight and not of tradition, and a religion by revelation to us, and not the history of theirs? Embosomed for a season in nature, whose floods of life stream around and through us, and invite us by the powers they supply, to action proportioned to nature, why should we grope among the dry bones of the past, or put the living generation into masquerade out of its faded wardrobe? The sun shines to-day also. There is more wool and flax in the fields. There are new lands, new men, new thoughts. Let us demand our own works and laws and worship.

Undoubtedly we have no questions to ask which are unanswerable. We must trust the perfection of the creation so far, as to believe that whatever curiosity the order of things has awakened in our minds, the order of things can satisfy. Every man's condition is a solution in hieroglyphic to these inquiries he would put. He acts it as life, before he apprehends it as truth. In like manner, nature is already, in its forms and tendencies, describing its own design. Let
us interrogate the great apparition, that shines so peacefully around us. Let us inquire to what end is nature?

All science has one aim, namely, to find a theory of nature. We have theories of races and of functions, but scarcely yet a remote approach to an idea of creation. We are now so far from the road to truth that religious teachers dispute and hate each other, and speculative men are esteemed unsound and frivolous. But to a sound judgment, the most abstract truth is the most practical. Whenever a true theory appears, it will be its own evidence. Its test is, that it will explain all phenomena. Now many are thought not only unexplained but inexplicable; as language, sleep, madness, dreams, beasts, sex.

Philosophically considered, the universe is composed of Nature and the Soul. Strictly speaking, therefore, all that is separate from us, all which Philosophy distinguishes as the not me, that is, both nature and art, all other men and my own body, must be ranked under this name, Nature. In enumerating the values of nature and casting up their sum, I shall use the word in both senses—in its common and in its philosophical import. In inquiries so general as our present one, the inaccuracy is not material; no confusion of thought will occur. Nature, in the common sense, refers to essences unchanged by man; space, the air, the river, the leaf. Art is applied to the mixture of his will with the same things, as in a house, a canal, a statue, a picture. But his operations taken together are so insignificant, a little chipping, baking, patching, and washing, that in an impression so grand as that of the world on the human mind, they do not vary the result.

I.—NATURE

To go into solitude, a man needs to retire as much from his chamber as from society. I am not solitary whilst I read and write, though nobody is with me. But if a man would be alone, let him look at the stars. The rays that come from those heavenly worlds, will separate between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly
bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are! If the stars should appear one night in a thousand years, how would men believe and adore; and preserve for many generations the remembrance of the city of God which had been shown! But every night come out these envoys of beauty, and light the universe with their admonishing smile.

The stars awaken a certain reverence, because, though always present, they are inaccessible; but all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance. Neither does the wisest man extort her secret, and lose his curiosity by finding out all her perfection. Nature never became a toy to a wise spirit. The flowers, the animals, the mountains, reflected the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

When we speak of nature in this manner, we have a distinct but most poetical sense in the mind. We mean the integrity of impression made by manifold natural objects. It is this which distinguishes the stick of timber of the wood-cutter, from the tree of the poet. The charming landscape which I saw this morning, is indubitably made up of some twenty or thirty farms. Miller owns this field, Locke that, and Manning the woodland beyond. But none of them owns the landscape. There is a property in the horizon which no man has but he whose eye can integrate all the parts, that is, the poet. This is the best part of these men's farms, yet to this their warranty-deeds give no title.

To speak truly, few adult persons can see nature. Most persons do not see the sun. At least they have a very superficial seeing. The sun illuminates only the eye of the man, but shines into the eye and the heart of the child. The lover of nature is he whose inward and outward senses are still truly adjusted to each other; who has retained the spirit of infancy even into the era of manhood. His intercourse with heaven and earth becomes part of his daily food. In the presence of nature, a wild delight runs through the man, in spite of real sorrows. Nature says,—he is my creature, and maugre all his impertinent griefs, he shall be glad with me. Not the sun or the summer alone, but every hour and season yields its tribute of delight: for every hour and change corresponds to and authorises a different state of the mind,
from breathless noon to grimmest midnight. Nature is a setting that fits equally well a comic or a mourning piece. In good health, the air is a cordial of incredible virtue. Crossing a bare common, in snow puddles, at twilight, under a clouded sky, without having in my thoughts any occurrence of special good fortune, I have enjoyed a perfect exhilaration. I am glad to the brink of fear. In the woods too, a man casts off his years, as the snake his slough, and at what period soever of life, is always a child. In the woods is perpetual youth. Within these plantations of God, a decorum and sanctity reign, a perennial festival is dressed, and the guest sees not how he should tire of them in a thousand years. In the woods, we return to reason and faith. There I feel that nothing can befall me in life—no disgrace, no calamity (leaving me my eyes), which nature cannot repair. Standing on the bare ground—my head bathed by the blithe air, and uplifted into infinite space—all mean egotism vanishes. I become a transparent eye-ball; I am nothing; I see all; the currents of the Universal Being circulate through me; I am part or parcel of God. The name of the nearest friend sounds then foreign and accidental; to be brothers, to be acquaintances—master or servant, is then a trifle and a disturbance. I am the lover of uncontained and immortal beauty. In the wilderness, I find something more dear and connate than in streets or villages. In the tranquil landscape, and especially in the distant line of the horizon, man beholds somewhat as beautiful as his own nature.

The greatest delight which the fields and woods minister, is the suggestion of an occult relation between man and the vegetable. I am not alone and unacknowledged. They nod to me, and I to them. The waving of the boughs in the storm, is new to me and old. It takes me by surprise, and yet is not unknown. Its effect is like that of a higher thought or a better emotion coming over me, when I deemed I was thinking justly or doing right.

Yet it is certain that the power to produce this delight does not reside in nature, but in man, or in harmony of both. It is necessary to use these pleasures with great temperance. For, nature is not always tricked in holiday attire, but the same scene which yesterday breathed perfume and glittered as for the frolic of the nymphs, is overspread with melancholy today. Nature always wears the colours of the spirit. To a
man labouring under calamity, the heat of his own fire hath sadness in it. Then, there is a kind of contempt of the landscape felt by him who has just lost by death a dear friend. The sky is less grand as it shuts down over less worth in the population.

II.—COMMODY

WHOEVER considers the final cause of the world, will discern, a multitude of uses that enter as parts into that result. They all admit of being thrown into one of the following classes: Commodity; Beauty; Language; and Discipline.

Under the general name of commodity, I rank all those advantages which our senses owe to nature. This, of course, is a benefit which is temporary and mediate, not ultimate, like its service to the soul. Yet, although low, it is perfect in its kind, and is the only use of nature which all men apprehend. The misery of man appears like childish petulance, when we explore the steady and prodigal provision that has been made for his support and delight on this green ball which floats him through the heavens. What angels invented these splendid ornaments, these rich conveniences, this ocean of air above, this ocean of water beneath, this firmament of earth between? this zodiac of lights, this tent of dropping clouds, this striped coat of climates, this fourfold year? Beasts, fire, water, stones, and corn, serve him. The field is at once his floor, his work-yard, his play-ground, his garden, and his bed.

"More servants wait on man
Than he'll take notice of."

Nature, in its ministry to man, is not only the material, but is also the process and the result. All the parts incessantly work into each other's hands for the profit of man. The wind sows the seed; the sun evaporates the sea; the wind blows the vapour to the field; the ice, on the other side of the planet, condenses rain on this; the rain feeds the plant; the plant feeds the animal: and thus the endless circulations of the divine charity nourish man.

The useful arts are reproductions or new combinations by the wit of man, of the same natural benefactors. He no
longer waits for favouring gales, but by means of steam, he realises the fable of Æolus's bag, and carries the two and thirty winds in the boiler of his boat. To diminish friction, he paves the road with iron bars, and, mounting a coach with a ship-load of men, animals, and merchandise behind him, he darts through the country, from town to town, like an eagle or a swallow through the air. By the aggregate of these aids, how is the face of the world changed, from the era of Noah to that of Napoleon! The private poor man hath cities, ships, canals, bridges, built for him. He goes to the post-office, and the human race run on his errands; to the book-shop, and the human race read and write of all that happens, for him; to the court-house, and nations repair his wrongs. He sets his house upon the road, and the human race go forth every morning, and shovel out the snow, and cut a path for him.

But there is no need of specifying particulars in this class of uses. The catalogue is endless, and the examples so obvious, that I shall leave them to the reader's reflection, with the general remark, that this mercenary benefit is one which has respect to a farther good. A man is fed, not that he may be fed, but that he may work.

III.—BEAUTY

A nobler want of man is served by nature, namely, the love of Beauty.

The ancient Greeks called the world κόσμος, beauty. Such is the constitution of all things, or such the plastic power of the human eye, that the primary forms, as the sky, the mountain, the tree, the animal, give us a delight in and for themselves; a pleasure arising from outline, colour, motion, and grouping. This seems partly owing to the eye itself. The eye is the best of artists. By the mutual action of its structure and of the laws of light, perspective is produced, which integrates every mass of objects, of what character soever, into a well-coloured and shaded globe, so that where the particular objects are mean and unaffecting, the landscape which they compose is round and symmetrical. And as the eye is the best composer, so light is the first of painters. There is no object so foul that intense light will not make
beautiful. And the stimulus it affords to the sense, and a sort of infinitude which it hath, like space and time, make all matter gay. Even the corpse has its own beauty. But besides this general grace diffused over nature, almost all the individual forms are agreeable to the eye, as is proved by our endless imitations of some of them, as the acorn, the grape, the pine-cone, the wheat-ear, the egg, the wings and forms of most birds, the lion's claw, the serpent, the butterfly, sea-shells, flames, clouds, buds, leaves, and the forms of many trees, as the palm.

For better consideration, we may distribute the aspects of Beauty in a threefold manner.

1. First, the simple perception of natural forms is a delight. The influence of the forms and actions in nature is so needful to man, that, in its lowest functions, it seems to lie on the confines of commodity and beauty. To the body and mind which have been cramped by noxious work or company, nature is medicinal and restores their tone. The tradesman, the attorney, comes out of the din and craft of the streets, and sees the sky and the woods, and is a man again. In their eternal calm he finds himself. The health of the eye seems to demand a horizon. We are never tired, so long as we can see far enough.

But in other hours, Nature satisfies by its loveliness, and without any mixture of corporeal benefit. I see the spectacle of morning from the hill-top over against my house, from daybreak to sunrise, with emotions which an angel might share. The long slender bars of cloud float like fishes in the sea of crimson light. From the earth, as a shore, I look out into that silent sea. I seem to partake its rapid transformations: the active enchantment reaches my dust, and I dilate and conspire with the morning wind. How does Nature deify us with a few and cheap elements! Give me health and a day, and I will make the pomp of emperors ridiculous. The dawn is my Assyria; the sunset and moonrise my Paphos, and unimaginable realms of faerie; broad noon shall be my England of the senses and the understanding; the night shall be my Germany of mystic philosophy and dreams.

Not less excellent, except for our less susceptibility in the afternoon, was the charm, last evening, of a January sunset. The western clouds divided and subdivided themselves into pink flakes modulated with tints of unspeakable softness;
and the air had so much life and sweetness, that it was a pain to come within doors. What was it that nature would say? Was there no meaning in the live repose of the valley behind the mill, and which Homer or Shakespeare could not re-form for me in words? The leafless trees become spires of flame in the sunset, with the blue east for their background, and the stars of the dead calices of flowers, and every withered stem and stubble rimed with frost, contribute something to the mute music.

The inhabitants of cities suppose that the country landscape is pleasant only half the year. I please myself with the graces of the winter scenery, and believe that we are as much touched by it as by the genial influences of summer. To the attentive eye, each moment of the year has its own beauty; and in the same field, it beholds, every hour, a picture which was never seen before, and which shall never be seen again. The heavens change every moment, and reflect their glory or gloom on the plains beneath. The state of the crop in the surrounding farms alters the expression of the earth from week to week. The succession of native plants in the pastures and roadsides, which makes the silent clock by which time tells the summer hours, will make even the divisions of the day sensible to a keen observer. The tribes of birds and insects, like the plants, punctual to their time, follow each other, and the year has room for all. By water-courses the variety is greater. In July, the blue pontederia or pickerel-weed blooms in large beds in the shallow parts of our pleasant river, and swarms with yellow butterflies in continual motion. Art cannot rival this pomp of purple and gold. Indeed the river is a perpetual gala, and boasts each month a new ornament.

But this beauty of Nature which is seen and felt as beauty, is the least part. The shows of day, the dewy morning, the rainbow, mountains, orchards in blossom, stars, moonlight, shadows in still water and the like, if too eagerly hunted, become shows merely, and mock us with their unreality. Go out of the house to see the moon, and 'tis mere tinsel; it will not please as when its light shines upon your necessary journey. The beauty that shimmers in the yellow afternoons of October, who ever could clutch it? Go forth to find it, and it is gone; 'tis only a mirage as you look from the windows of diligence.
2. The presence of a higher, namely, of the spiritual element is essential to its perfection. The high and divine beauty which can be loved without effeminacy, is that which is found in combination with the human will. Beauty is the mark God sets upon virtue. Every natural action is graceful. Every heroic act is also decent, and causes the place and the bystanders to shine. We are taught by great actions that the universe is the property of every individual in it. Every rational creature has all nature for his dowry and estate. It is his, if he will. He may divest himself of it; he may creep into a corner, and abdicate his kingdom, as most men do, but he is entitled to the world by his constitution. In proportion to the energy of his thought and will, he takes up the world into himself. "All those things for which men plough, build, or sail, obey virtue," said Sallust. "The winds and waves," said Gibbon, "are always on the side of the ablest navigators." So are the sun and moon and all the stars of heaven. When a noble act is done,—perchance in a scene of great natural beauty; when Leonidas and his three hundred martyrs consume one day in dying, and the sun and moon come each and look at them once in the steep defile of Thermopylæ; when Arnold Winkelried, in the high Alps, under the shadow of the avalanche, gathers in his side a sheaf of Austrian spears to break the line for his comrades; are not these heroes entitled to add the beauty of the scene to the beauty of the deed? When the bark of Columbus nears the shore of America,—before it, the beach lined with savages, fleeing out of all their huts of cane; the sea behind; and the purple mountains of the Indian Archipelago around, can we separate the man from the living picture? Does not the New World clothe his form with her palm-groves and savannahs as fit drapery? Ever does natural beauty steal in like air, and envelope great actions. When Sir Harry Vane was dragged up the Tower Hill, sitting on a sled, to suffer death, as the champion of the English laws, one of the multitude cried out to him, "You never sate on so glorious a seat." Charles II., to intimidate the citizens of London, caused the patriot Lord Russell to be drawn in an open coach, through the principal streets of the city, on his way to the scaffold. "But," his biographer says, "the multitude imagined they saw liberty and virtue sitting by his side." In private places, among sordid objects, an act of truth or heroism seems at
once to draw to itself the sky as its temple, the sun as its 
cradle. Nature stretches out her arms to embrace man, 
only let his thoughts be of equal greatness. Willingly does 
she follow his steps with the rose and the violet, and bend 
her lines of grandeur and grace to the decoration of her 
darling child. Only let his thoughts be of equal scope, and 
the frame will suit the picture. A virtuous man is in unison 
with her works, and makes the central figure of the visible 
sphere. Homer, Pindar, Socrates, Phocion, associate them-
seves fitly in our memory with the geography and climate 
of Greece. The visible heavens and earth sympathise with 
Jesus. And in common life, whosoever has seen a person of 
powerful character and happy genius, will have remarked 
how easily he took all things along with him,—the persons, 
the opinions, and the day, and nature became ancillary to a 
man.

3. There is still another aspect under which the beauty of 
the world may be viewed, namely, as it becomes an object of 
the intellect. Beside the relation of things to virtue, they 
have a relation to thought. The intellect searches out the 
absolute order of things as they stand in the mind of God, 
and without the colours of affection. The intellectual and 
the active powers seem to succeed each other, and the 
exclusive activity of the one, generates the exclusive activity 
of the other. There is something unfriendly in each to the 
other, but they are like the alternate periods of feeding and 
working in animals; each prepares and will be followed by 
the other. Therefore does beauty, which, in relation to 
actions, as we have seen, comes unsought, and comes because 
it is unsought, remain for the apprehension and pursuit of 
the intellect; and then again, in its turn, of the active power. 
Nothing divine dies. All good is eternally reproductive. 
The beauty of nature re-forms itself in the mind, and not for 
barren contemplation, but for new creation.

All men are in some degree impressed by the face of the 
world; some men even to delight. This love of beauty is 
Taste. Others have the same love in such excess, that, not 
content with admiring, they seek to embody it in new forms. 
The creation of beauty is Art.

The production of a work of art throws a light upon the 
mystery of humanity. A work of art is an abstract or 
epitome of the world. It is the result or expression of nature,
in miniature. For, although the works of nature are innumerable and all different, the result or the expression of them all is similar and single. Nature is a sea of forms radically alike and even unique. A leaf, a sun-beam, a landscape, the ocean, make an analogous impression on the mind. What is common to them all,—that perfectness and harmony, is beauty. The standard of beauty is the entire circuit of natural forms,—the totality of nature; which the Italians expressed by defining beauty “il piu nell’ uno.” Nothing is quite beautiful alone: nothing but is beautiful in the whole. A single object is only so far beautiful as it suggests this universal grace. The poet, the painter, the sculptor, the musician, the architect, seek each to concentrate this radiance of the world on one point, and each in his several work to satisfy the love of beauty which stimulates him to produce. Thus is Art, a nature passed through the alembic of man. Thus in art, does nature work through the will of a man filled with the beauty of her first works.

The world thus exists to the soul to satisfy the desire of beauty. This element I call an ultimate end. No reason can be asked or given why the soul seeks beauty. Beauty, in its largest and profoundest sense, is one expression for the universe. God is the all-fair. Truth, and goodness, and beauty, are but different faces of the same All. But beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good. It must stand as a part and not as yet the last or highest expression of the final cause of Nature.

IV.—LANGUAGE

Language is a third use which Nature subserves to man. Nature is the vehicle of thought, and in a simple, double, and threefold degree.

1. Words are signs of natural facts.
2. Particular natural facts are symbols of particular spiritual facts.
3. Nature is the symbol of spirit.
1. Words are signs of natural facts. The use of natural
history is to give us aid in supernatural history: the use of the outer creation, to give us language for the beings and changes of the inward creation. Every word which is used to express a moral or intellectual fact, if traced to its root, is found to be borrowed from some material appearance. Right means straight; wrong means twisted. Spirit primarily means wind; transgression, the crossing of a line; supercilious, the raising of the eyebrow. We say the heart to express emotion, the head to denote thought; and thought and emotion are words borrowed from sensible things, and now appropriated to spiritual nature. Most of the process by which this transformation is made, is hidden from us in the remote time when language was framed; but the same tendency may be daily observed in children. Children and savages use only nouns or names of things, which they convert into verbs, and apply to analogous mental acts.

2. But this origin of all words that convey a spiritual import,—so conspicuous a fact in the history of language,—is our least debt to nature. It is not words only that are emblematic; it is things which are emblematic. Every natural fact is a symbol of some spiritual fact. Every appearance in nature corresponds to some state of the mind, and that state of the mind can only be described by presenting that natural appearance as its picture. An enraged man is a lion, a cunning man is a fox, a firm man is a rock, a learned man is a torch. A lamb is innocence; a snake is subtle spite; flowers express to us the delicate affections. Light and darkness are our familiar expression for knowledge and ignorance; and heat for love. Visible distance behind and before us, is respectively our image of memory and hope.

Who looks upon a river in a meditative hour, and is not reminded of the flux of all things? Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all influence. Man is conscious of a universal soul within or behind his individual life, wherein, as in a firmament, the natures of Justice, Truth, Love, Freedom, arise and shine. This universal soul, he calls Reason: it is not mine, or thine, or his, but we are its; we are its property and men. And the blue sky in which the private earth is buried, the sky with its eternal calm, and full of everlasting orbs, is the type of Reason. That which, intellectually considered, we call Reason, considered in relation to nature,
we call Spirit. Spirit is the Creator. Spirit hath life in itself. And man in all ages and countries, embodies it in his language, as the Father.

It is easily seen that there is nothing lucky or capricious in these analogies, but that they are constant, and pervade nature. These are not the dreams of a few poets, here and there, but man is an analogist, and studies relations in all objects. He is placed in the centre of beings, and a ray of relation passes from every other being to him. And neither can man be understood without these objects, nor these objects without man. All the facts in natural history, taken by themselves, have no value, but are barren, like a single sex. But marry it to human history, and it is full of life. Whole Floras, all Linnæus' and Buffon's volumes, are dry catalogues of facts; but the most trivial of these facts, the habit of a plant, the organs, or work, or noise of an insect, applied to the illustration of a fact in intellectual philosophy, or, in any way associated to human nature, affects us in the most lively and agreeable manner. The seed of a plant,—to what affecting analogies in the nature of man is that little fruit made use of, in all discourse, up to the voice of Paul, who calls the human corpse a seed,—"It is sown a natural body; it is raised a spiritual body." The motion of the earth round its axis, and round the sun, makes the day, and the year. These are certain amounts of brute light and heat. But is there no intent of an analogy between man's life and the seasons? And do the seasons gain no grandeur or pathos from that analogy? The instincts of the ant are very unimportant, considered as the ant's; but the moment a ray of relation is seen to extend from it to man, and the little drudge is seen to be a monitor, a little body with a mighty heart, then all its habits, even that said to be recently observed, that it never sleeps, become sublime.

Because of this radical correspondence between visible things and human thoughts, savages, who have only what is necessary, converse in figures. As we go back in history, language becomes more picturesque, until its infancy, when it is all poetry; or all spiritual facts are represented by natural symbols. The same symbols are found to make the original elements of all languages. It has moreover been observed, that the idioms of all languages approach each other in passages of the greatest eloquence and power. And
as this is the first language, so is it the last. This immediate dependence of language upon nature, this conversion of an outward phenomenon into a type of somewhat in human life, never loses its power to affect us. It is this which gives that piquancy to the conversation of a strong-natured farmer or backwoodsman, which all men relish.

A man's power to connect his thought with its proper symbol, and so to utter it, depends on the simplicity of his character, that is, upon his love of truth, and his desire to communicate it without loss. The corruption of man is followed by the corruption of language. When simplicity of character and the sovereignty of ideas is broken up by the prevalence of secondary desires, the desire of riches, of pleasure, of power, and of praise—and duplicity and falsehood take place of simplicity and truth, the power over nature as an interpreter of the will, is in a degree lost; new imagery ceases to be created, and old words are perverted to stand for things which are not; a paper currency is employed, when there is no bullion in the vaults. In due time, the fraud is manifest, and words lose all power to stimulate the understanding or the affections. Hundreds of writers may be found in every long-civilised nation, who for a short time believe, and make others believe, that they see and utter truths, who do not of themselves clothe one thought in its natural garment, but who feed unconsciously on the language created by the primary writers of the country, those, namely, who hold primarily on nature.

But wise men pierce this rotten diction and fasten words again to visible things; so that picturesque language is at once a commanding certificate that he who employs it, is a man in alliance with truth and God. The moment our discourse rises above the ground line of familiar facts, and is inflamed with passion or exalted by thought, it clothes itself in images. A man conversing in earnest, if he watch his intellectual processes, will find that a material image, more or less luminous, arises in his mind, contemporaneous with every thought, which furnishes the vestment of the thought. Hence, good writing and brilliant discourse are perpetual allegories. This imagery is spontaneous. It is the blending of experience with the present action of the mind. It is proper creation. It is the working of the Original Cause through the instruments he has already made.
These facts may suggest the advantage which the country life possesses for a powerful mind, over the artificial and curtained life of cities. We know more from nature than we can at will communicate. Its light flows into the mind evermore, and we forget its presence. The poet, the orator, bred in the woods, whose senses have been nourished by their fair and appeasing changes, year after year, without design and without heed—shall not lose their lesson altogether, in the roar of cities or the broil of politics. Long thereafter, amidst agitation and terror in national councils—in the hour of revolution—these solemn images shall reappear in their morning lustre, as fit symbols and words of the thoughts which the passing events shall awaken. At the call of a noble sentiment, again the woods wave, the pines murmur, the river rolls and shines, and the cattle low upon the mountains, as he saw and heard them in his infancy. And with these forms, the spells of persuasion, the keys of power, are put into his hands.

3. We are thus assisted by natural objects in the expression of particular meanings. But how great a language to convey such pepper-corn informations! Did it need such noble races of creatures, this profusion of forms, this host of orbs in heaven, to furnish man with the dictionary and grammar of his municipal speech? Whilst we use this grand cipher to expedite the affairs of our pot and kettle, we feel that we have not yet put it to its use, neither are able. We are like travellers using the cinders of a volcano to roast their eggs. Whilst we see that it always stands ready to clothe what we would say, we cannot avoid the question, whether the characters are not significant of themselves. Have mountains, and waves, and skies no significance but what we consciously give them, when we employ them as emblems of our thoughts? The world is emblematic. Parts of speech are metaphors, because the whole of nature is a metaphor of the human mind. The laws of moral nature answer to those of matter as face to face in a glass. "The visible world and the relation of its parts, is the dial plate of the invisible." The axioms of physics translate the laws of ethics. Thus, "the whole is greater than its part;" "reaction is equal to action;" "the smallest weight may be made to lift the greatest, the difference in weight being compensated by time;" and many the like propositions, which have an ethical as well as physical sense. These propositions have a much more extensive and
universal sense when applied to human life, than when confined to technical use.

In like manner, the memorable words of history, and the proverbs of nations, consist usually of a natural fact, selected as a picture or parable of a moral truth. Thus: A rolling stone gathers no moss; A bird in the hand is worth two in the bush; A cripple in the right way, will beat a racer in the wrong; Make hay while the sun shines; 'Tis hard to carry a full cup even; Vinegar is the son of wine; The last ounce broke the camel's back; Long-lived trees make roots first;— and the like. In their primary sense these are trivial facts, but we repeat them for the value of their analogical import. What is true of proverbs, is true of all fables, parables, and allegories.

This relation between the mind and matter is not fancied by some poet, but stands in the will of God, and so is free to be known by all men. It appears to men, or it does not appear. When in fortunate hours we ponder this miracle, the wise man doubts, if, at all other times, he is not blind and deaf;

"Can these things be,
And overcome us like a summer's cloud,
Without our special wonder?"

for the universe becomes transparent, and the light of higher laws than its own shines through it. It is the standing problem which has exercised the wonder and the study of every fine genius since the world began; from the era of the Egyptians and the Brahmmins, to that of Pythagoras, of Plato, of Bacon, of Leibnitz, of Swedenborg. There sits the Sphinx at the road-side, and from age to age, as each prophet comes by, he tries his fortune at reading her riddle. There seems to be a necessity in spirit to manifest itself in material forms; and day and night, river and storm, beast and bird, acid and alkali, pre-exist in necessary Ideas in the mind of God, and are what they are by virtue of preceding affections, in the world of spirit. A Fact is the end or last issue of spirit. The visible creation is the terminus or the circumference of the invisible world. "Material objects," said a French philosopher, "are necessarily kinds of scoriæ of the substantial thoughts of the Creator, which must always preserve an exact relation to their first origin; in other words, visible nature must have a spiritual and moral side."
This doctrine is abstruse, and though the images of "gar-ment," "scoriae," "mirror," etc., may stimulate the fancy, we must summon the aid of subtler and more vital expositors to make it plain. "Every scripture is to be interpreted by the same spirit which gave it forth,"—is the fundamental law of criticism. A life in harmony with nature, the love of truth and of virtue, will purge the eyes to understand her text. By degrees we may come to know the primitive sense of the permanent objects of nature, so that the world shall be to us an open book, and every form significant of its hidden life and final cause.

A new interest surprises us, whilst, under the view now suggested, we contemplate the fearful extent and multitude of objects; since "every object rightly seen, unlocks a new faculty of the soul." That which was unconscious truth, becomes, when interpreted and defined in an object, a part of the domain of knowledge,—a new weapon in the magazine of power.

V.—DISCIPLINE

In view of the significance of nature, we arrive at once at a new fact, that nature is a discipline. This use of the world includes the preceding uses, as parts of itself.

Space, time, society, labour, climate, food, locomotion, the animals, the mechanical forces, give us sincerest lessons, day by day, whose meaning is unlimited. They educate both the Understanding and the Reason. Every property of matter is a school for the understanding,—its solidity or resistance, its inertia, its extension, its figure, its divisibility. The understanding adds, divides, combines, measures, and finds nutriment and room for its activity in this worthy scene. Meantime, Reason transfers all these lessons into its own world of thought, by perceiving the analogy that marries Matter and Mind.

1. Nature is a discipline of the understanding in intellectual truths. Our dealing with sensible objects is a constant exercise in the necessary lessons of difference, of likeness, of order, of being and seeming, of progressive arrangement; of assent from particular to general; of combination to one end
of manifold forces. Proportioned to the importance of the
organ to be formed, is the extreme care with which its tuition
is provided,—a care pretermitted in no single case. What
tedious training, day after day, year after year, never ending,
to form the common sense; what continual reproduction of
annoyances, inconveniences, dilemmas; what rejoicing over
us of little men; what disputing of prices, what reckonings of
interest,—and all to form the Hand of the mind;—to instruct
us that "good thoughts are no better than good dreams,
unless they be executed!"

The same good office is performed by Property and its filial
systems of debt and credit. Debt, grinding debt, whose iron
face the widow, the orphan, and the sons of genius fear and
hate;—debt, which consumes so much time, which so cripples
and disheartens a great spirit with cares that seem so base, is
a preceptor whose lessons cannot be foregone, and is needed
most by those who suffer from it most. Moreover, property,
which has been well compared to snow,—"if it fall level to-
day, it will be blown into drifts to-morrow,"—is the surface
action of internal machinery, like the index on the face of a
clock. Whilst now it is the gymnastics of the understand-
ing, it is having in the foresight of the spirit, experience in
profonder laws.

The whole character and fortune of the individual are
affected by the least inequalities in the culture of the under-
standing; for example, in the perception of differences.
Therefore is Space, and therefore Time, that man may know
that things are not huddled and lumped, but sundered and
individual. A bell and a plough have each their use, and
neither can do the office of the other. Water is good to
drink, coal to burn, wool to wear; but wool cannot be drunk,
nor water spun, nor coal eaten. The wise man shows his
wisdom in separation, in gradation, and his scale of creatures
and of merits is as wide as nature. The foolish have no range
in their scale, but suppose every man is as every other man.
What is not good they call the worst, and what is not hateful,
they call the best.

In like manner, what good heed nature forms in us! She
pARDons no mistakes. Her yea is yea, and her nay, nay.

The first steps in Agriculture, Astronomy, Zoölogy (those
first steps which the farmer, the hunter, and the sailor take),
teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results.

How calmly and genially the mind apprehends one after another the laws of physics! What noble emotions dilate the mortal as he enters into the counsels of the creation, and feels by knowledge the privilege to Be! His insight refines him. The beauty of nature shines in his own breast. Man is greater that he can see this, and the universe less, because Time and Space relations vanish as laws are known.

Here again we are impressed and even daunted by the immense Universe to be explored. "What we know, is a point to what we do not know." Open any recent journal of science, and weigh the problems suggested concerning Light, Heat, Electricity, Magnetism, Physiology, Geology, and judge whether the interest of natural science is likely to be soon exhausted.

Passing by many particulars of the discipline of nature, we must not omit to specify two.

The exercise of the Will or the lesson of power is taught in every event. From the child's successive possession of his several senses up to the hour when he saith, "Thy will be done!" he is learning the secret, that he can reduce under his will, not only particular events, but great classes, nay the whole series of events, and so conform all facts to his character. Nature is thoroughly mediate. It is made to serve. It receives the dominion of man as meekly as the ass on which the Saviour rode. It offers all its kingdoms to man as the raw material which he may mould into what is useful. Man is never weary of working it up. He forges the subtile and delicate air into wise and melodious words, and gives them wing as angels of persuasion and command. One after another, his victorious thought comes up with and reduces all things, until the world becomes, at last, only a realised will,—the double of the man.

2. Sensible objects conform to the premonitions of Reason and reflect the conscience. All things are moral; and in their boundless changes have an unceasing reference to spiritual nature. Therefore is nature glorious with form, colour, and motion, that every globe in the remotest heaven; every chemical change from the rudest crystal up to the laws of life; every change of vegetation from the first principle of growth in the eye of a leaf, to the tropical forest and
antediluvian coal-mine; every animal function from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments. Therefore is nature ever the ally of Religion: lends all her pomp and riches to the religious sentiment. Prophet and priest, David, Isaiah, Jesus, have drawn deeply from this source. This ethical character so penetrates the bone and marrow of nature, as to seem the end for which it was made. Whatever private purpose is answered by any member or part, this is its public and universal function, and is never omitted. Nothing in nature is exhausted in its first use. When a thing has served an end to the uttermost, it is wholly new for an ulterior service. In God, every end is converted into a new means. Thus the use of commodity, regarded by itself, is mean and squalid. But it is to the mind an education in the doctrine of Use, namely, that a thing is good only so far as it serves; that a conspiring of parts and efforts to the production of an end, is essential to any being. The first and gross manifestation of this truth, is our inevitable and hated training in values and wants, in corn and meat.

It has already been illustrated, that every natural process is a version of a moral sentence. The moral law lies at the centre of nature and radiates to the circumference. It is the pith and marrow of every substance, every relation, and every process. All things with which we deal, preach to us. What is a farm but a mute gospel? The chaff and the wheat, weeds and plants, blight, rain, insects, sun,—it is a sacred emblem from the first furrow of spring to the last stack which the snow of winter overtakes in the fields. But the sailor, the shepherd, the miner, the merchant, in their several resorts, have each an experience precisely parallel, and leading to the same conclusion: because all organisations are radically alike. Nor can it be doubted that this moral sentiment which thus scents the air, grows in the grain, and impregnates the waters of the world, is caught by man and sinks into his soul. The moral influence of nature upon every individual is that amount of truth which it illustrates to him. Who can estimate this? Who can guess how much firmness the sea-beaten rock has taught the fisherman? how much tranquillity has been reflected to man from the azure sky, over whose unspotted deeps the winds for evermore drive flocks of stormy
clouds, and leave no wrinkle or stain? how much industry and providence and affection we have caught from the pantomime of brutes? What a searching preacher of self-command is the varying phenomenon of Health!

Herein is especially apprehended the unity of Nature,—the unity of variety,—which meets us everywhere. All the endless variety of things make an identical impression. Xenophanes complained in his old age, that, look where he would, all things hastened back to Unity. He was weary of seeing the same entity in the tedious variety of forms. The fable of Proteus has a cordial truth. A leaf, a drop, a crystal, a moment of time is related to the whole, and partakes of the perfection of the whole. Each particle is a microcosm, and faithfully renders the likeness of the world.

Not only resemblances exist in things whose analogy is obvious, as when we detect the type of the human hand in the flipper of the fossil saurus, but also in objects wherein there is great superficial unlikeness. Thus architecture is called "frozen music," by De Stael and Goethe. Vitruvius thought an architect should be a musician. "A Gothic church," said Coleridge, "is a petrified religion." Michael Angelo maintained, that, to an architect, a knowledge of anatomy is essential. In Haydn's oratorios, the notes present to the imagination not only motions, as, of the snake, the stag, and the elephant, but colours also; as the green grass. The law of harmonic sounds reappears in the harmonic colours. The granite is differenced in its laws only by the more or less of heat, from the river that wears it away. The river, as it flows, resembles the air that flows over it; the air resembles the light which traverses it with more subtle currents; the light resembles the heat which rides with it through Space. Each creature is only a modification of the other; the likeness in them is more than the difference, and their radical law is one and the same. A rule of one art, or a law of one organisation, holds true throughout nature. So intimate is this Unity, that, it is easily seen, it lies under the undermost garment of nature, and betray its source in Universal Spirit. For, it pervades Thought also. Every universal truth which we express in words, implies or supposes every other truth. Omne verum vero consonat. It is like a great circle on a sphere, comprising all possible circles; which, however, may be drawn, and comprise it, in like
manner. Every such truth is the absolute Ens seen from one side. But it has innumerable sides.

The central Unity is still more conspicuous in actions. Words are finite organs of the infinite mind. They cannot cover the dimensions of what is in truth. They break, chop, and impoverish it. An action is the perfection and publication of thought. A right action seems to fill the eye, and to be related to all nature. "The wise man, in doing one thing, does all; or, in the one thing he does rightly, he sees the likeness of all which is done rightly."

Words and actions are not the attributes of brute nature. They introduce us to the human form, of which all other organisations appear to be degradations. When this appears among so many that surround it, the spirit prefers it to all others. It says, "From such as this, have I drawn joy and knowledge; in such as this, have I found and beheld myself; I will speak to it; it can speak again; it can yield me thought already formed and alive." In fact, the eye,—the mind,—is always accompanied by these forms, male and female; and these are incomparably the richest informations of the power and order that lie at the heart of things. Unfortunately, every one of them bears the marks as of some injury; is marred and superficially defective. Nevertheless, far different from the deaf and dumb nature around them, these all rest like fountain-pipes on the unfathomed sea of thought and virtue whereto they alone, of all organisations, are the entrances.

It were a pleasant inquiry to follow into detail their ministry to our education, but where would it stop? We are associated in adolescent and adult life with some friends, who, like skies and waters, are co-extensive with our idea; who, answering each to a certain affection of the soul, satisfy our desire on that side; whom we lack power to put at such focal distance from us, that we can mend or even analyse them. We cannot choose but love them. When much intercourse with a friend has supplied us with a standard of excellence, and has increased our respect for the resources of God who thus sends a real person to outgo our ideal; when he has, moreover, become an object of thought, and, whilst his character retains all its unconscious effect, is converted in the mind into solid and sweet wisdom,—it is a sign to us that his office is closing, and he is commonly withdrawn from our sight in a short time.
VI.—IDEALISM

Thus is the unspeakable but intelligible and practicable meaning of the world conveyed to man, the immortal pupil in every object of sense. To this one end of Discipline, all parts of nature conspire.

A noble doubt perpetually suggests itself, whether this end be not the Final Cause of the Universe; and whether nature outwardly exists. It is a sufficient account of that Appearance we call the World, that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations, which we call sun and moon, man and woman, house and trade. In my utter impotence to test the authenticity of the report of my senses, to know whether the impressions they make on me correspond with outlying objects, what difference does it make, whether Orion is up there in heaven, or some god paints the image in the firmament of the soul? The relations of parts and the end of the whole remaining the same, what is the difference, whether land and sea interact, and worlds revolve and intermingle without number or end,—deep yawning under deep, and galaxy balancing galaxy, throughout absolute space,—or, whether, without relations of time and space, the same appearances are inscribed in the constant faith of man? Whether nature enjoy a substantial existence without, or is only in the apocalypse of the mind, it is alike useful and alike venerable to me. Be it what it may, it is ideal to me, so long as I cannot try the accuracy of my senses.

The frivolous make themselves merry with the Ideal theory, as if its consequences were burlesque; as if it affected the stability of nature. It surely does not. God never jests with us, and will not compromise the end of nature, by permitting any inconsequence in its procession. Any distrust of the permanence of laws, would paralyse the faculties of man. Their permanence is sacredly respected, and his faith therein is perfect. The wheels and springs of man are all set to the hypothesis of the permanence of nature. We are not built like a ship to be tossed, but like a house to stand. It is a natural consequence of this structure, that, so long as
the active powers predominate over the reflective, we resist with indignation any hint that nature is more short-lived or mutable than spirit. The broker, the wheelwright, the carpenter, the toll-man are much displeased at the intimation.

But whilst we asquiesce entirely in the permanence of natural laws, the question of the absolute existence of nature still remains open. It is the uniform effect of culture on the human mind, not to shake our faith in the stability of particular phenomena, as of heat, water, azote; but to lead us to regard nature as phenomenon, not a substance; to attribute necessary existence to spirit; to esteem nature as an accident and an effect.

To the senses and the unrenewed understanding belongs a sort of instinctive belief in the absolute existence of nature. In their view, man and nature are indissolubly joined. Things are ultimates, and they never look beyond their sphere. The presence of reason mars this faith. The first effort of thought tends to relax this despotism of the senses, which binds us to nature as if we were a part of it, and shows us nature aloof, and, as it were, afloat. Until this higher agency intervened, the animal eye sees, with wonderful accuracy, sharp outlines and coloured surfaces. When the eye of Reason opens, to outline and surface are at once added grace and expression. These proceed from imagination and affection, and abate somewhat of the angular distinctness of objects. If the Reason be stimulated to more earnest vision, outlines and surfaces become transparent, and are no longer seen; causes and spirits are seen through them. The best moments of life are these delicious awakenings of the higher powers, and the reverential withdrawing of nature before its God.

Let us proceed to indicate the effects of culture. I. Our first institution in the Ideal philosophy is a hint from nature herself.

Nature is made to conspire with spirit to emancipate us. Certain mechanical changes, a small alteration in our local position, apprises us of a dualism. We are strangely affected by seeing the shore from a moving ship, from a balloon, or through the tints of an unusual sky. The last change in our point of view gives the whole world a pictorial air. A man who seldom rides, needs only to get into a coach and traverse his own town, to turn the street into a puppet-show. The
men, the women,—talking, running, bartering, fighting,—
the earnest mechanic, the lounging, the beggar, the boys, the
dogs, are unrealised at once, or, at least, wholly detached
from all relation to the observer, and seen as apparent, not
substantial beings. What new thoughts are suggested by
seeing a face of country quite familiar, in the rapid movement
of the railroad car! Nay, the most wonted objects (make a
very slight change in the point of vision) please us most. In
a camera obscura, the butcher’s cart, and the figure of one of
our own family, amuse us. So a portrait of a well-known
face gratifies us. Turn the eyes upside down, by looking at
the landscape through your legs, and how agreeable is the
picture, though you have seen it any time these twenty years!
In these cases, by mechanical means, is suggested the
difference between the observer and the spectacle,—between
man and nature. Hence arises a pleasure mixed with awe;
I may say, a low degree of the sublime is felt from the fact,
probably, that man is hereby apprised, that, whilst the world
is a spectacle, something in himself is stable.

2. In a higher manner, the poet communicates the same
pleasure. By a few strokes he delineates, as on air, the sun,
the mountain, the camp, the city, the hero, the maiden, not
different from what we know them, but only lifted from the
ground and afloat before the eye. He unfixes the land and
the sea, makes them revolve around the axis of his primary
thought, and disposes them anew. Possessed himself by a
heroic passion, he uses matter as symbols of it. The sensual
man conforms thoughts to things; the poet conforms things
to his thoughts. The one esteems nature as rooted and fast;
the other, as fluid, and impresses his being thereon. To him,
the refractory world is ductile and flexible; he invests dust
and stones with humanity, and makes them the words of the
Reason. The Imagination may be defined to be, the use
which the Reason makes of the material world. Shakespeare
possesses the power of subordinating nature for the purposes
of expression, beyond all poets. His imperial muse tosses
the creation like a bauble from hand to hand, and uses it to
embody any caprice of thought that is uppermost in his mind.
The remotest spaces of nature are visited, and the farthest
sundered things are brought together, by a subtile spiritual
connection. We are made aware that magnitude of material
things is relative, and all objects shrink and expand to serve
the passion of the poet. Thus, in his sonnets, the lays of
birds, the scents and dyes of flowers, he finds to be the shadow
of his beloved; time, which keeps her from him, is his chest;
the suspicion she has awakened, is her ornament;

The ornament of beauty is Suspect,
A crow which flies in heaven's sweetest air.

His passion is not the fruit of chance; it swells, as he speaks
to a city, or a state.

No, it was builded far from accident;
It suffers not in smiling pomp, nor falls
Under the brow of thralling discontent;
It fears not policy, that heretic,
That works on leases of short numbered hours,
But all alone stands hugely politic.

In the strength of his constancy, the Pyramids seem to him
recent and transitory. The freshness of youth and love
dazzles him with its resemblance to morning.

Take those lips away
Which so sweetly were forsworn:
And those eyes,—the break of day,
Lights that do mislead the morn.

The wild beauty of this hyperbole, I may say, in passing, it
would not be easy to match in literature.

This transfiguration which all material objects undergo
through the passion of the poet,—this power which he exerts
to dwarf the great, to magnify the small,—might be illus-
trated by a thousand examples from his Plays. I have
before me the Tempest, and will cite only these few lines.

Prospero. The strong based promontory
Have I made shake, and by the spurs plucked up
The pine and cedar.

Prospero calls for music to soothe the frantic Alonso, and his
companions;

A solemn air, and the best comforter
To an unsettled fancy, cure thy brains
Now useless, boiled within thy skull.

Again;

The charm dissolves apace,
And, as the morning steals upon the night
Melting the darkness, so their rising senses
Begin to chase the ignorant fumes that mantle
Their clearer reason.

Their understanding
 Begins to swell: and the approaching tide
Will shortly fill the reasonable shore
That now lies foul and muddy.
The perception of real affinities between events (that is to say, of ideal affinities, for those only are real), enables the poet thus to make free with the most imposing forms and phenomena of the world, and to assert the predominance of the soul.

3. Whilst thus the poet animates nature with his own thoughts, he differs from the philosopher only herein, that the one proposes Beauty as his main end; the other Truth. But the philosopher, not less than the poet, postpones the apparent order and relations of things to the empire of thought. "The problem of philosophy," according to Plato, "is, for all that exists conditionally, to find a ground unconditioned and absolute." It proceeds on the faith that a law determines all phenomena, which being known, the phenomena can be predicted. That law, when in the mind, is an idea. Its beauty is infinite. The true philosopher and the true poet are one, and a beauty, which is truth, and a truth, which is beauty, is the aim of both. Is not the charm of one of Plato's or Aristotle's definitions, strictly like that of the Antigone of Sophocles? It is, in both cases, that a spiritual life has been imparted to nature; that the solid seeming block of matter has been pervaded and dissolved by a thought; that this feeble human being has penetrated the vast masses of nature with an informing soul, and recognised itself in their harmony, that is, seized their law. In physics, when this is attained, the memory disburthens itself of its cumbersome catalogues of particulars, and carries centuries of observation in a single formula.

Thus even in physics, the material is degraded before the spiritual. The astronomer, the geometer, rely on their irrefragable analysis, and disdain the results of observation. The sublime remark of Euler on his law of arches, "This will be found contrary to all experience, yet is true:" had already transferred nature into the mind, and left matter like an outcast corpse.

4. Intellectual science has been observed to beget invariably a doubt of the existence of matter. Turgot said, "He that has never doubted the existence of matter, may be assured he has no aptitude for metaphysical inquiries." It fastens the attention upon immortal necessary uncreated natures, that is, upon Ideas; and in their presence, we feel that the outward circumstance is a dream and a shade.
Whilst we wait in this Olympus of gods, we think of nature as an appendix to the soul. We ascend into their region, and know that these are the thoughts of the Supreme Being. "These are they who were set up from everlasting, from the beginning, or ever the earth was. When he prepared the heavens, they were there; when he established the clouds above, when he strengthened the fountains of the deep. Then they were by him, as one brought up with him. Of them took he counsel."

Their influence is proportionate. As objects of science, they are accessible to few men. Yet all men are capable of being raised by piety or by passion, into their region. And no man touches these divine natures, without becoming, in some degree, himself divine. Like a new soul, they renew the body. We become physically nimble and lightsome; we tread on air; life is no longer irksome, and we think it will never be so. No man fears age or misfortune or death, in their serene company, for he is transported out of the district of change. Whilst we behold unveiled the nature of Justice and Truth, we learn the difference between the absolute and the conditional or relative. We apprehend the absolute. As it were, for the first time, we exist. We become immortal, for we learn that time and space are relations of matter; that, with a perception of truth, or a virtuous will, they have no affinity.

5. Finally, religion and ethics, which may be fitly called,—the practice of ideas, or the introduction of ideas into life,—have an analogous effect with all lower culture, in degrading nature and suggesting its dependence on spirit. Ethics and religion differ herein; that the one is the system of human duties commencing from man; the other, from God. Religion includes the personality of God; Ethics does not. They are one to our present design. They both put nature under foot. The first and last lesson of religion is, "The things that are seen are temporal; the things that are unseen are eternal." It puts an affront upon nature. It does that for the unschooled, which philosophy does for Berkeley and Viasa. The uniform language that may be heard in the churches of the most ignorant sects, is,—"Contemn the unsubstantial shows of the world; they are vanities, dreams, shadows, unrealities: seek the realities of religion." The devotee flouts nature. Some theosophists have arrived at a certain
hostility and indignation towards matter, as the Manichean and Plotinus. They distrusted in themselves any looking back to these fleshpots of Egypt. Plotinus was ashamed of his body. In short, they might all say of matter, what Michael Angelo said of external beauty, “it is the frail and weary weed, in which God dresses the soul, which he has called into time.”

It appears that motion, poetry, physical and intellectual science, and religion, all tend to affect our convictions of the reality of the external world. But I own there is something ungrateful in expanding too curiously the particulars of the general proposition, that all culture tends to imbue us with idealism. I have no hostility to nature, but a child’s love to it. I expand and live in the warm day like corn and melons. Let us speak her fair. I do not wish to fling stones at my beautiful mother, nor soil my gentle nest. I only wish to indicate the true position of nature in regard to man, wherein to establish man, all right education tends; as the ground which to attain is the object of human life, that is, of man’s connection with nature. Culture inverts the vulgar views of nature, and brings the mind to call that apparent, which it uses to call real, and that real, which it uses to call visionary. Children, it is true, believe in the external world. The belief that it appears only, is an afterthought, but with culture, this faith will as surely arise in the mind as did the first.

The advantage of the ideal theory over the popular faith, is this, that it presents the world in precisely that view which is most desirable to the mind. It is, in fact, the view which Reason, both speculative and practical, that is, philosophy and virtue, take. For, seen in the light of thought, the world always is phenomenal; and virtue subordinates it to the mind. Idealism sees the world in God. It beholds the whole circle of persons and things, of actions and events, of country and religion, not as painfully accumulated, atom after atom, act after act, in an aged creeping Past, but as one vast picture, which God paints on the instant eternity, for the contemplation of the soul. Therefore the soul holds itself off from a too trivial and microscopic study of the universal tablet. It respects the end too much, to immerse itself in the means. It sees something more important in Christianity, than the scandals of ecclesiastical history, or the niceties of criticism; and, very incurious concerning persons or miracles,
and not at all disturbed by chasms of historical evidence, it accepts from God the phenomenon, as it finds it, as the pure and awful form of religion in the world. It is not hot and passionate at the appearance of what it calls its own good or bad fortune, at the union or opposition of other persons. No man is its enemy. It accepts whatsoever befalls, as part of its lesson. It is a watcher more than a doer, and it is a doer, only that it may the better watch.

VII.—SPIRIT

It is essential to a true theory of nature and of man, that it should contain somewhat progressive. Uses that are exhausted or that may be, and facts that end in the statement, cannot be all that is true of this brave lodging wherein man is harboured, and wherein all his faculties find appropriate and endless exercise. And all the uses of nature admit of being summed in one, which yields the activity of man an infinite scope. Through all its kingdoms, to the suburbs and outskirts of things, it is faithful to the cause whence it had its origin. It always speaks of Spirit. It suggests the absolute. It is a perpetual effect. It is a great shadow pointing always to the sun behind us.

The aspect of nature is devout. Like the figure of Jesus, she stands with bended head, and hands folded upon the breast. The happiest man is he who learns from nature the lesson of worship.

Of that ineffable essence which we call Spirit, he that thinks most, will say least. We can foresee God in the coarse, and, as it were, distant phenomena of matter; but when we try to define and describe himself, both language and thought desert us, and we are as helpless as fools and savages. That essence refuses to be recorded in propositions, but when man has worshipped him intellectually, the noblest ministry of nature is to stand as the apparition of God. It is the organ through which the universal spirit speaks to the individual, and strives to lead back the individual to it.

When we consider Spirit we see that the views already presented do not include the whole circumference of man. We must add some related thoughts.
Three problems are put by nature to the mind; What is matter? Whence is it? and Whereto? The first of these questions only, the ideal theory answers. Idealism saith: matter is a phenomenon, not a substance. Idealism acquaints us with the total disparity between the evidence of our own being, and the evidence of the world’s being. The one is perfect; the other, incapable of any assurance; the mind is a part of the nature of things; the world is a divine dream, from which we may presently awake to the glories and certainties of day. Idealism is a hypothesis to account for nature by other principles than those of carpentry and chemistry. Yet, if it only deny the existence of matter, it does not satisfy the demands of the spirit. It leaves God out of me. It leaves me in the splendid labyrinth of my perceptions, to wander without end. Then the heart resists it, because it baulks the affections in denying substantive being to men and women. Nature is so pervaded with human life, that there is something of humanity in all, and in every particular. But this theory makes nature foreign to me, and does not account for that consanguinity which we acknowledge to it.

Let it stand, then, in the present state of our knowledge, merely as a useful introductory hypothesis, serving to apprise us of the eternal distinction between the soul and the world.

But when, following the invisible steps of thought, we come to inquire, Whence is matter? and Whereto? many truths arise to us out of the recesses of consciousness. We learn that the highest is present to the soul of man, that the dread universal essence, which is not wisdom, or love, or beauty, or power, but all in one, and each entirely, is that for which all things exist, and that by which they are; that spirit creates; that behind nature, throughout nature, spirit is present; one and not compound, it does not act upon us from without, that is, in space and time, but spiritually, or through ourselves: therefore, that spirit, that is, the Supreme Being, does not build up nature around us, but puts it forth through us, as the life of the tree puts forth new branches and leaves through the pores of the old. As a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power. Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute natures of
justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the creator in the finite. This view, which admonishes me where the sources of wisdom and power lie, and points to virtue as to

"The golden key
Which opes the palace of eternity,"

carries upon its face the highest certificate of truth, because it animates me to create my own world through the purification of my soul.

The world proceeds from the same spirit as the body of man. It is a remoter and inferior incarnation of God, a projection of God in the unconscious. But it differs from the body in one important respect. It is not, like that, now subjected to the human will. Its serene order is inviolable by us. It is, therefore, to us, the present expositor of the divine mind. It is a fixed point whereby we may measure our departure. As we degenerate, the contrast between us and our house is more evident. We are as much strangers in nature, as we are aliens from God. We do not understand the notes of birds. The fox and the deer run away from us; the bear and tiger rend us. We do not know the uses of more than a few plants, as corn and the apple, the potato and the vine. Is not the landscape, every glimpse of which hath a grandeur, a face of him? Yet this may show us what discord is between man and nature, for you cannot freely admire a noble landscape, if labourers are digging in the field hard by. The poet finds something ridiculous in his delight, until he is out of the sight of men.

VIII.—PROSPECTS

In inquiries respecting the laws of the world and the frame of things, the highest reason is always the truest. That which seems faintly possible—it is so refined, is often faint and dim because it is deepest seated in the mind among the eternal verities. Empirical science is apt to cloud the sight, and, by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic. But the best read naturalist,
who lends an entire and devout attention to truth, will see that there remains much to learn of his relation to the world, and that it is not to be learned by any addition or subtraction or other comparison of known quantities, but is arrived at by untaught sallies of the spirit, by a continual self-recovery, and by entire humility. He will perceive that there are far more excellent qualities in the student than preciseness and infallibility; that a guess is often more fruitful than an indisputable affirmation, and that a dream may let us deeper into the secret of nature than a hundred concerted experiments. For, the problems to be solved are precisely those which the physiologist and the naturalist omit to state. It is not so pertinent to man to know all the individuals of the animal kingdom, as it is to know whence and whereto is this tyrannising unity in his constitution, which evermore separates and classifies things, endeavouring to reduce the most diverse to one form. When I behold a rich landscape, it is less to my purpose to recite correctly the order and superposition of the strata, than to know why all thought of multitude is lost in a tranquil sense of unity. I cannot greatly honour minuteness in details, so long as there is no hint to explain the relation between things and thoughts; no ray upon the metaphysics of conchology, of botany, of the arts, to show the relation of the forms of flowers, shells, animals, architecture, to the mind, and build science upon ideas. In a cabinet of natural history, we become sensible of a certain occult recognition and sympathy in regard to the most unwieldy and eccentric forms of beast, fish, and insect. The American who has been confined, in his own country, to the sight of buildings designed after foreign models, is surprised on entering York Minster or St. Peter's at Rome, by the feeling that these structures are imitations also,—faint copies of an invisible archetype. Nor has science sufficient humanity, so long as the naturalist overlooks that wonderful congruity which subsists between man and the world; of which he is lord, not because he is the most subtle inhabitant, but because he is its head and heart, and finds something of himself in every great and small thing, in every mountain stratum, in every new law of colour, fact of astronomy, or atmospheric influence which observation or analysis lay open. A perception of this mystery inspires the muse of George Herbert, the beautiful psalmist of the seventeenth
century. The following lines are part of his little poem on Man.

"Man is all symmetry,  
Full of proportions, one limb to another,  
And all to all the world besides.  
Each part may call the farthest, brother;  
For head with foot hath private amity,  
And both with moons and tides.

"Nothing hath got so far  
But man hath caught and kept it as his prey;  
His eyes dismount the highest star;  
He is in little all the sphere.  
Herbs gladly cure our flesh, because that they  
Find their acquaintance there.

"For us, the winds do blow,  
The earth doth rest, heaven move, and fountains flow;  
Nothing we see, but means our good,  
As our delight, or as our treasure;  
The whole is either our cupboard of food,  
Or cabinet of pleasure.

"The stars have us to bed:  
Night draws the curtain; which the sun withdraws.  
Music and light attend our head.  
All things unto our flesh are kind,  
In their descent and being; to our mind,  
In their ascent and cause.

"More servants wait on man  
Than he'll take notice of. In every path,  
He treads down that which doth befriend him  
When sickness makes him pale and wan.  
Oh mighty love! Man is one world, and hath  
Another to attend him."

The perception of this class of truths makes the attraction which draws men to science, but the end is lost sight of in attention to the means. In view of this half-sight of science, we accept the sentence of Plato, that "poetry comes nearer to vital truth than history." Every surmise and vaticination of the mind is entitled to a certain respect, and we learn to prefer imperfect theories, and sentences, which contain glimpses of truth, to digested systems which have no one valuable suggestion. A wise writer will feel that the ends of study and composition are best answered by announcing undiscovered regions of thought, and so communicating, through hope, new activity to the torpid spirit.

I shall therefore conclude this essay with some traditions of man and nature, which a certain poet sang to me; and
which, as they have always been in the world, and perhaps reappear to every bard, may be both history and prophecy.

"The foundations of man are not in matter, but in spirit. But the element of spirit is eternity. To it, therefore, the longest series of events, the oldest chronologies, are young and recent. In the cycle of the universal man, from whom the known individuals proceed, centuries are points, and all history is but the epoch of one degradation.

"We distrust and deny inwardly our sympathy with nature. We own and disown our relation to it, by turns. We are, like Nebuchadnezzar, dethroned, bereft of reason, and eating grass like an ox. But who can set limits to the remedial force of spirit?

"A man is a god in ruins. When men are innocent, life shall be longer, and shall pass into the immortal, as gently as we awake from dreams. Now, the world would be insane and rabid, if these disorganisations should last for hundreds of years. It is kept in check by death and infancy. Infancy is the perpetual Messiah, which comes into the arms of fallen men, and pleads with them to return to paradise.

"Man is the dwarf of himself. Once he was permeated and dissolved by spirit. He filled nature with his overflowing currents. Out from him sprang the sun and moon: from man, the sun; from woman, the moon. The laws of his mind, the periods of his actions, externised themselves into day and night, into the year and the seasons. But, having made for himself this huge shell, his waters retired; he no longer fills the veins and veinlets; he is shrunk to a drop. He sees, that the structure still fits him, but fits him colossally. Say, rather, once it fitted him, now it corresponds to him from far and on high. He adores timidly his own work. Now is man the follower of the sun, and woman the follower of the moon. Yet sometimes he starts in his slumber, and wonders at himself and his house, and muses strangely at the resemblance betwixt him and it. He perceives that if his law is still paramount, if still he have elemental power, if his word is sterling yet in nature, it is not conscious power, it is not inferior but superior to his will. It is Instinct." Thus my Orphic poet sang.

At present, man applies to nature but half his force. He works on the world with his understanding alone. He lives in it, and masters it by a penny-wisdom; and he that works
most in it, is but a half-man, and whilst his arms are strong and his digestion good, his mind is imbruted, and he is a selfish savage. His relation to nature, his power over it, is through the understanding; as by manure; the economic use of fire, wind, water, and the mariner's needle; steam, coal, chemical agriculture; the repairs of the human body by the dentist and the surgeon. This is such a resumption of power, as if a banished king should buy his territories inch by inch, instead of vaulting at once into his throne. Meanwhile, in the thick darkness, there are not wanting gleams of a better light—occasional examples of the action of man upon nature with his entire force—with reason as well as understanding. Such examples are; the traditions of miracles in the earliest antiquity of all nations; the history of Jesus Christ; the achievements of a principle, as in religious and political revolutions, and in the abolition of the Slave-trade, the miracles of enthusiasm, as those reported of Swedenborg, Hohenlohe, and the Shakers; many obscure and yet contested facts, now arranged under the name of Animal Magnetism; prayer; eloquence; self-healing; and the wisdom of children. These are examples of Reason's momentary grasp of the sceptre; the exertions of a power which exists not in time or space, but an instantaneous in-streaming causing power. The difference between the actual and the ideal force of man is happily figured by the schoolmen, in saying, that the knowledge of man is an evening knowledge, vespertina cognitio, but that of God is a morning knowledge, matutina cognitio.

The problem of restoring to the world original and eternal beauty is solved by the redemption of the soul. The ruin or the blank, that we see when we look at nature, is in our own eye. The axis of vision is not coincident with the axis of things, and so they appear not transparent but opaque. The reason why the world lacks unity, and lies broken and in heaps, is, because man is disunited with himself. He cannot be a naturalist, until he satisfies all the demands of the spirit. Love is as much its demand, as perception. Indeed, neither can be perfect without the other. In the uttermost meaning of the words, thought is devout, and devotion is thought. Deep calls unto deep. But in actual life, the marriage is not celebrated. There are innocent men who worship God after the tradition of their fathers, but their sense of duty has not
yet extended to the use of all their faculties. And there are patient naturalists, but they freeze their subject under the wintry light of the understanding. Is not prayer also a study of truth—a sally of the soul into the unfound infinite? No man ever prayed heartily, without learning something. But when a faithful thinker, resolute to detach every object from personal relations, and see it in the light of thought, shall, at the same time, kindle science with the fire of the holiest affections, then will God go forth anew into the creation.

It will not need, when the mind is prepared for study, to search for objects. The invariable mark of wisdom is to see the miraculous in the common. What is a day? What is a year? What is summer? What is woman? What is a child? What is sleep? To our blindness, these things seem unaffecting. We make fables to hide the baldness of the fact, and conform it, as we say, to the higher law of the mind. But when the fact is seen under the light of an idea, the gaudy fable fades and shrivels. We behold the real higher law. To the wise, therefore, a fact is true poetry, and the most beautiful of fables. These wonders are brought to our own door. You also are a man. Man and woman, and their social life, poverty, labour, sleep, fear, fortune, are known to you. Learn that none of these things is superficial, but that each phenomenon has its roots in the faculties and affections of the mind. Whilst the abstract question occupies your intellect, nature brings it in the concrete to be solved by your hands. It were a wise inquiry for the closet, to compare, point by point, especially at remarkable crises in life, our daily history, with the rise and progress of ideas in the mind.

So shall we come to look at the world with new eyes. It shall answer the endless inquiry of the intellect—What is truth? and of the affections—What is good? by yielding itself passive to the educated Will. Then shall come to pass what my poet said; "Nature is not fixed but fluid. Spirit alters, moulds, makes it. The immobility or bruteness of nature, is the absence of spirit; to pure spirit, it is fluid, it is volatile, it is obedient. Every spirit builds itself a house; and beyond its house, a world; and beyond its world, a heaven. Know then, that the world exists for you. For you is the phenomenon perfect. What we are, that only can we see. All that Adam had, all that Cesar could, you have and can do. Adam called his house, heaven and earth; Cesar
called his house, Rome; you perhaps call yours, a cobbler’s trade; a hundred acres of ploughed land; or a scholar’s garret. Yet line for line and point for point, your dominion is as great as theirs, though without fine names. Build, therefore, your own world. As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions. A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, mad-houses, prisons, enemies, vanish; they are temporary and shall be no more seen. The sordor and filths of nature, the sun shall dry up, and the wind exhale. As when the summer comes from the south; the snow-banks melt, and the face of the earth becomes green before it, so shall the advancing spirit create its ornaments along its path, and carry with it the beauty it visits, and the song which enchants it; it shall draw beautiful faces, warm hearts, wise discourse, and heroic acts, around its way, until evil is no more seen. The kingdom of man over nature, which cometh not with observation—a dominion such as now is beyond his dream of God—he shall enter without more wonder than the blind man feels who is gradually restored to perfect sight.
Gentlemen,—Let us exchange congratulations on the enjoyments and the promises of this literary anniversary. The land we live in has no interest so dear, if it knew its want, as the fit consecration of days of reason and thought. Where there is no vision, the people perish. The scholars are the priests of that thought which establishes the foundations of the earth. No matter what is their special work or profession, they stand for the spiritual interest of the world, and it is a common calamity if they neglect their post in a country where the material interest is so predominant as it is in America. We hear something too much of the results of machinery, commerce, and the useful arts. We are a puny and a fickle folk. Avarice, hesitation, and following, are our diseases. The rapid wealth which hundreds in the community acquire in trade, or by the incessant expansions of our population and arts, enchants the eyes of all the rest; the luck of one is the hope of thousands, and the bribe acts like the neighbourhood of a gold mine to impoverish the farm, the school, the church, the house, and the very body and feature of man.

I do not wish to look with sour aspect at the industrious manufacturing village, or the mart of commerce. I love the music of the water-wheel; I value the railway; I feel the pride which the sight of a ship inspires; I look on trade and every mechanical craft as education also. But let me discriminate what is precious herein. There is in each of these works an act of invention, an intellectual step, or short series of steps taken; that act or step is the spiritual act; all the rest is mere repetition of the same a thousand times. And I will not be deceived into admiring the routine of handicrafts and mechanics, how splendid soever the result, any more
than I admire the routine of the scholars or clerical class. That splendid results ensue from the labours of stupid men, is the fruit of higher laws than their will, and the routine is not to be praised for it. I would not have the labourer sacrificed to the result,—I would not have the labourer sacrificed to my convenience and pride, nor to that of a great class of such as me. Let there be worse cotton and better men. The weaver should not be bereaved of his superiority to his work, and his knowledge that the product or the skill is of no value, except so far as it embodies his spiritual prerogatives. If I see nothing to admire in the unit, shall I admire a million units? Men stand in awe of the city, but do not honour any individual citizen; and are continually yielding to this dazzling result of numbers, that which they would never yield to the solitary example of any one.

Whilst the multitude of men degrade each other, and give currency to desponding doctrines, the scholar must be a bringer of hope, and must reinforce man against himself. I sometimes believe that our literary anniversaries will presently assume a greater importance, as the eyes of men open to their capabilities. Here, a new set of distinctions, a new order of ideas, prevail. Here, we set a bound to the respectability of wealth, and a bound to the pretensions of the law and the church. The bigot must cease to be a bigot to-day. Into our charmed circle, power cannot enter; and the sturdiest defender of existing institutions feels the terrific inflammability of this air which condenses heat in every corner that may restore to the elements the fabrics of ages. Nothing solid is secure; everything tilts and rocks. Even the scholar is not safe; he too is searched and revised. Is his learning dead? Is he living in his memory? The power of mind is not mortification, but life. But come forth, thou curious child! hither, thou loving, all-hoping poet! hither, thou tender, doubting heart, who has not yet found any place in the world's market fit for thee; any wares which thou couldst buy or sell,—so large is thy love and ambition,—thine and not theirs is the hour. Smooth thy brow, and hope and love on, for the kind heaven justifies thee and the whole world feels that thou art in the right.

We ought to celebrate this hour by expressions of manly joy. Not thanks, not prayer, seem quite the highest or truest name for our communication with the infinite,—but
The Method of Nature

41

glad and conspiring reception,—reception that becomes giving in its turn, as the receiver is only the All-Giver in part and in infancy. I cannot,—nor can any man,—speak precisely of things so sublime, but it seems to me, the wit of man, his strength, his grace, his tendency, his art, is the grace and the presence of God. It is beyond explanation. When all is said and done, the rapt saint is found the only logician. Not exhortation, not argument becomes our lips, but pæans of joy and praise. But not of adulation: we are too nearly related in the deep of the mind to that we honour. It is God in us which checks the language of petition by a grander thought. In the bottom of the heart, it is said; “I am, and by me, O child! this fair body and world of thine stands and grows. I am; all things are mine: and all mine are thine.”

The festival of the intellect, and the return to its source, cast a strong light on the always interesting topics of Man and Nature. We are forcibly reminded of the old want. There is no man; there hath never been. The Intellect still asks that a man may be born. The flame of life flickers feebly in human breasts. We demand of men a richness and universality we do not find. Great men do not content us. It is their solitude, not their force, that makes them conspicuous. There is somewhat indigent and tedious about them. They are poorly tied to one thought. If they are prophets, they are egotists; if polite and various, they are shallow. How tardily men arrive at any result! how tardily they pass from it to another. The crystal sphere of thought is as concentrical as the geological structure of the globe. As our soils and rocks lie in strata, concentric strata, so do all men’s thinkings run laterally, never vertically. Here comes by a great inquisitor with auger and plumb-line, and will bore an Artesian well through our conventions and theories, and pierce to the core of things. But as soon as he probes the crust, behold gimlet, plumb-line, and philosopher take a lateral direction, in spite of all resistance, as if some strong wind took everything off its feet, and if you come month after month to see what progress our reformer has made—not an inch has he pierced—you still find him with new words in the old place, floating about in new parts of the same old vein or crust. The new book says “I will give you the key to nature,” and we expect to go like a thunderbolt to the centre. But the thunder is a surface phenomenon, makes a
skin-deep cut, and so does the sage. The wedge turns out to be a rocket. Thus a man lasts but a very little while, for his monomania becomes insupportably tedious in a few months. It is so with every book and person: and yet—and yet—we do not take up a new book, or meet a new man, without a pulse-beat of expectation. And this invincible hope of a more adequate interpreter is the sure prediction of his advent.

In the absence of man, we turn to nature, which stands next. In the divine order, intellect is primary; nature, secondary; it is the memory of the mind. That which once existed in intellect as pure law, has now taken body as Nature. It existed already in the mind in solution; now, it has been precipitated, and the bright sediment is the world. We can never be quite strangers or inferiors in nature. It is flesh of our flesh, and bone of our bone. But we no longer hold it by the hand; we have lost our miraculous power; our arm is no more as strong as the frost; nor our will equivalent to gravity and the elective attractions. Yet we can use nature as a convenient standard, and the meter of our rise and fall. It has this advantage as a witness, it cannot be debauched. When man curses, nature still testifies to truth and love. We may, therefore, safely study the mind in nature, because we cannot steadily gaze on it in mind; as we explore the face of the sun in a pool, when our eyes cannot brook his direct splendours.

It seems to me, therefore, that it were some suitable paean, if we should piously celebrate this hour by exploring the method of nature. Let us see that, as nearly as we can, and try how far it is transferable to the literary life. Every earnest glance we give to the realities around us, with intent to learn, proceeds from a holy impulse, and is really songs of praise. What difference can it make whether it take the shape of exhortation, or of passionate exclamation, or of scientific statement? These are forms merely. Through them we express, at last, the fact, that God has done thus or thus.

In treating a subject so large, in which we must necessarily appeal to the intuition, and aim much more to suggest than to describe, I know it is not easy to speak with the precision attainable on topics of less scope. I do not wish in attempting to paint a man, to describe an air-fed, unimpassioned,
impossible ghost. My eyes and ears are revolted by any neglect of the physical facts, the limitations of man. And yet one who conceives the true order of nature, and beholds the visible as proceeding from the invisible, cannot state his thought, without seeming to those who study the physical laws, to do them some injustice. There is an intrinsic defect in the organ. Language overstates. Statements of the infinite, are usually felt to be unjust to the finite, and blasphemous. Empedocles undoubtedly spoke a truth of thought, when he said, "I am God;" but the moment it was out of his mouth, it became a lie to the ear; and the world revenged itself for the seeming arrogance, by the good story about his shoe. How can I hope for better hap in my attempts to enunciate spiritual facts? Yet let us hope, that as far as we receive the truth, so far shall we be felt by every true person to say what is just.

The method of nature: who could ever analyse it? That rushing stream will not stop to be observed. We can never surprise nature in a corner; never find the end of a thread; never tell where to set the first stone. The bird hastens to lay her egg: the egg hastens to be a bird. The wholeness we admire in the order of the world, is the result of infinite distribution. Its smoothness is the smoothness of the pitch of the cataract. Its permanence is a perpetual inchoation. Every natural fact is an emanation, and that from which it emanates is an emanation also, and from every emanation is a new emanation. If anything could stand still, it would be crushed and dissipated by the torrent it resisted, and if it were a mind, would be crazed; as insane persons are those who hold fast to one thought, and do not flow with the course of nature. Not the cause, but an ever novel effect, nature descends always from above. It is unbroken obedience. The beauty of these fair objects is imported into them from a metaphysical and eternal spring. In all animal and vegetable forms, the physiologist concedes that no chemistry, no mechanics, can account for the facts, but a mysterious principle of life must be assumed which not only inhabits the organ, but makes the organ.

How silent, how spacious, what room for all, yet without place to insert an atom,—in graceful succession, in equal fulness, in balanced beauty, the dance of the hours goes forward still. Like an odour of incense, like a strain of
music, like a sleep, it is inexact and boundless. It will not be dissected, nor unravelled, nor shown. Away, profane philosopher! seekest thou in nature the cause? This refers to that, and that to the next, and the next to the third, and everything refers. Thou must ask in another mood, thou must feel it and love it, thou must behold it in a spirit as grand as that by which it exists, ere thou canst know the law. Known it will not be, but gladly beloved and enjoyed.

The simultaneous life throughout the whole body, the equal serving of innumerable ends without the least emphasis or preference to any, but the steady degradation of each to the success of all, allows the understanding no place to work. Nature can only be conceived as existing to a universal and not to a particular end, to a universe of ends, and not to one,—a work of ecstasy, to be represented by a circular movement, as intention might be signified by a straight line of definite length. Each effect strengthens every other. There is no revolt in all the kingdoms from the commonweal: no detachment of an individual. Hence the catholic character which makes every leaf an exponent of the world. When we behold the landscape in a poetical spirit, we do not reckon individuals. Nature knows neither palm nor oak, but only vegetable life, which sprouts into forests, and festoons the globe with a garland of grasses and vines.

That no single end may be selected, and nature judged thereby, appears from this, that if man himself be considered as the end, and it be assumed that the final cause of the world is to make holy or wise or beautiful men, we see that it has not succeeded. Read alternately in natural and in civil history, a treatise of astronomy, for example, with a volume of French Mémoires pour servir. When we have spent our wonder in computing this wasteful hospitality with which boon nature turns off new firmaments without end into her wide common, as fast as the madrepores make coral,—suns and planets hospitable to souls,—and then shorten the sight to look into this court of Louis Quatorze, and see the game that is played there,—duke and marshal, abbé and madame,—a gambling table where each is laying traps for the other, where the end is ever by some lie or fetch to outwit your rival and ruin him with this solemn fop in wig and stars,—the king; one can hardly help asking if this planet is a fair specimen of the so generous astronomy, and if so, whether
the experiment have not failed, and whether it be quite
worth while to make more, and glut the innocent space with
so poor an article.

I think we feel not much otherwise if, instead of beholding
foolish nations, we take the great and wise men, the eminent
souls, and narrowly inspect their biography. None of them
seen by himself—and his performance compared with his
promise or idea, will justify the cost of that enormous
apparatus of means by which this spotted and defective
person was at last procured.

To questions of this sort, nature replies, "I grow." All is
nascent, infant. When we are dizzied with the arithmetic of
the savant toiling to compute the length of her line, the
return of her curve, we are steadied by the perception that a
great deal is doing; that all seems just begun; remote aims
are in active accomplishment. We can point nowhere to
anything final; but tendency appears on all hands: planet,
system, constellation, total nature is growing like a field of
maize in July; is becoming somewhat else; is in rapid meta-
morphosis. The embryo does not more strive to be man,
than yonder burr of light we call a nebula tends to be a ring,
a comet, a globe, and parent of new stars. Why should not
then these messieurs of Versailles strut and plot for tabourets
and ribbons, for a season, without prejudice to their faculty
to run on better errands by and by?

But nature seems further to reply, "I have ventured so
great a stake as my success, in no single creature. I have
not yet arrived at any end. The gardener aims to produce
a fine peach or pear, but my aim is the health of the whole
tree,—root, stem, leaf, flower, and seed,—and by no means
the pampering of a monstrous pericarp at the expense of all
the other functions."

In short, the spirit and peculiarity of that impression
nature makes on us, is this, that it does not exist to any one
or to any number of particular ends, but to numberless and
endless benefit; that there is in it no private will, no rebel
leaf or limb, but the whole is oppressed by one superin-
cumbent tendency, obeys that redundancy or excess of life
which in conscious beings we call ecstacy.

With this conception of the genius or method of nature,
let us go back to man. It is true, he pretends to give account
of himself to himself, but, at last, what has he to recite but
the fact that there is a Life not to be described or known otherwise than by possession? What account can he give of his essence more than so it was to be? The royal reason, the Grace of God, seems the only description of our multiform but ever identical fact. There is virtue, there is genius, there is success, or there is not. There is the incoming or the receding of God, that is all we can affirm; and we can show neither how nor why. Self-accusation, remorse, and the didactic morals of self-denial and strife with sin, is a view we are constrained by our constitution to take of the fact seen from the platform of action; but seen from the platform of intellection, there is nothing for us but praise and wonder.

The termination of the world in a man, appears to be the last victory of intelligence. The universal does not attract us until housed in an individual. Who heeds the waste abyss of possibility? The ocean is everywhere the same, but it has no character until seen with the shore or the ship. Who would value any number of miles of Atlantic brine bounded by lines of latitude and longitude? Confine it by granite rocks, let it wash a shore where wise men dwell, and it is filled with expression; and the point of greatest interest is where the land and water meet. So must we admire in man, the form of the formless, the concentration of the vast, the house of reason, the cave of memory. See the play of thoughts! what nimble gigantic creatures are these! what saurians, what palaiotheria shall be named with these agile movers? The great Pan of old, who was clothed in a leopard skin to signify the beautiful variety of things and the firmament, his coat of stars,—was but the representative of thee, O rich and various Man! thou palace of sight and sound, carrying in thy senses the morning and the night and the unfathomable galaxy; in thy brain, the geometry of the City of God; in thy heart, the bower of love and the realms of right and wrong. An individual man is a fruit which it cost all the foregoing ages to form and ripen. The history of the genesis or the old mythology repeats itself in the experience of every child. He too is a demon or god thrown into a particular chaos, where he strives ever to lead things from disorder into order. Each individual soul is such, in virtue of its being a power to translate the world into some particular language of its own; if not into a picture, a statue, or a dance,—why, then, into a trade, an art, a science, a mode
of living, a conversation, a character, an influence. You admire pictures, but it is as impossible for you to paint a right picture, as for grass to bear apples. But when the genius comes, it makes fingers; it is pliancy, and the power of transferring the affair in the street into oils and colours. Raphael must be born, and Salvator must be born.

There is no attractiveness like that of a new man. The sleepy nations are occupied with their political routine. England, France, and America read Parliamentary Debates, which no high genius now enlivens; and nobody will read them who trusts his own eye: only they who are deceived by the popular repetition of distinguished names. But when Napoleon unrolls his map, the eye is commanded by original power. When Chatham leads the debate, men may well listen, because they must listen. A man, a personal ascendancy is the only great phenomenon. When nature has work to be done, she creates a genius to do it. Follow the great man, and you shall see what the world has at heart in these ages. There is no omen like that.

But what strikes us in the fine genius is that which belongs of right to every one. A man should know himself for a necessary actor. A link was wanting between two craving parts of nature, and he was hurled into being as the bridge over that yawning need, the mediator betwixt two else un-marriageable facts. His two parents held each of one of the wants, and the union of foreign constitutions in him enables him to do gladly and gracefully what the assembled human race could not have sufficed to do. He knows his materials; he applies himself to his work; he cannot read, or think, or look, but he unites the hitherto separated strands into a perfect cord. The thoughts he delights to utter are the reason of his incarnation. Is it for him to account himself cheap and superfluous, or to linger by the wayside for opportunities? Did he not come into being because something must be done which he and no other is and does? If only he sees, the world will be visible enough. He need not study where to stand, nor to put things in favourable lights; in him is the light, from him all things are illuminated to their centre. What patron shall he ask for employment and reward? Hereto was he born, to deliver the thought of his heart from the universe to the universe, to do an office which nature could not forego, nor he be discharged from rendering,
and then immerge again into the holy silence and eternity out of which as a man he arose. God is rich, and many more men than one he harbours in his bosom, biding their time and the needs and the beauty of all. Is not this the theory of every man's genius or faculty? Why then goest thou as some Boswell or listening worshipper to this saint or to that? That is the only lese-majesty. Here art thou with whom so long the universe travailed in labour; darest thou think meanly of thyself whom the stalwart Fate brought forth to unite his ragged sides, to shoot the gulf, to reconcile the irreconcilable?

Whilst a necessity so great caused the man to exist, his health and erectness consist in the fidelity with which he transmits influences from the vast and universal to the point on which his genius can act. The ends are momentary: they are vents for the current of inward life which increases as it is spent. A man's wisdom is to know that all ends are momentary, that the best end must be superseded by a better. But there is a mischievous tendency in him to transfer his thought from the life to the ends, to quit his agency and rest in his acts: the tools run away with the workmen, the human with the divine. I conceive a man as always spoken to from behind, and unable to turn his head and see the speaker. In all the millions who have heard the voice, none ever saw the face. As children in their play run behind each other, and seize one by the ears and make him walk before them, so is the spirit our unseen pilot. That well-known voice speaks in all languages, governs all men, and none ever caught a glimpse of its form. If the man will exactly obey it, it will adopt him, so that he shall not any longer separate it from himself in his thought, he shall seem to be it, he shall be it. If he listen with insatiable ears, richer and greater wisdom is taught him, the sound swells to a ravishing music, he is borne away as with a flood, he becomes careless of his food and of his house, he is the fool of ideas, and leads a heavenly life. But if his eye is set on the things to be done, and not on the truth that is still taught, and for the sake of which the things are to be done, then the voice grows faint, and at last is but a humming in his ears. His health and greatness consist in his being the channel through which heaven flows to earth, in short, in the fulness in which an ecstical state takes place in him. It is pitiful
to be an artist, when, by forbearing to be artists, we might be vessels filled with the divine overflowings, enriched by the circulations of omniscience and omnipresence. Are there not moments in the history of heaven when the human race was not counted by individuals, but was only the Influenced, was God in distribution, God rushing into multiform benefit? It is sublime to receive, sublime to love, but this lust of imparting as from us, this desire to be loved, the wish to be recognised as individuals,—is finite, comes of a lower strain.

Shall I say, then, that, as far as we can trace the natural history of the soul, its health consists in the fulness of its reception,—call it piety, call it veneration—in the fact, that enthusiasm is organised therein. What is best in any work of art, but that part which the work itself seems to require and do; that which the man cannot do again, that which flows from the hour and the occasion, like the eloquence of men in a tumultuous debate? It was always the theory of literature, that the word of a poet was authoritative and final. He was supposed to be the mouth of a divine wisdom. We rather envied his circumstance than his talent. We, too, could have gladly prophesied standing in that place. We so quote our Scriptures; and the Greeks so quoted Homer, Theognis, Pindar, and the rest. If the theory has receded out of modern criticism, it is because we have not had poets. Whenever they appear, they will redeem their own credit.

This ecstastical state seems to direct a regard to the whole and not to the parts; to the cause and not to the ends; to the tendency, and not to the act. It respects genius and not talent; hope, and not possession: the anticipation of all things by the intellect, and not the history itself; art, and not works of art; poetry, and not experiment; virtue, and not duties.

There is no office or function of man but is rightly discharged by this divine method, and nothing that is not noxious to him if detached from its universal relations. Is it his work in the world to study nature, or the laws of the world? Let him beware of proposing to himself any end. Is it for use? nature is debased, as if one looking at the ocean can remember only the price of fish. Or is it for pleasure? he is mocked: there is a certain infatuating air in woods and mountains which draws on the idler to want and misery. There is something social and intrusive in the nature of all
things; they seek to penetrate and overpower, each the nature of every other creature, and itself alone in all modes and throughout space and spirit to prevail, and possess. Every star in heaven is discontented and insatiable. Gravitation and chemistry cannot content them. Ever they woo and court the eye of every beholder. Every man who comes into the world they seek to fascinate and possess, to pass into his mind, for they desire to republish themselves in a more delicate world than that they occupy. It is not enough that they are Jove, Mars, Orion, and the North Star, in the gravitating firmament: they would have such poets as Newton, Herschel, and Laplace, that they may re-exist and re-appear in the finer world of rational souls, and fill that realm with their fame. So is it with all immaterial objects. These beautiful basilisks set their brute, glorious eyes on the eye of every child, and, if they can, cause their nature to pass through his wondering eyes into him, and so all things are mixed.

Therefore man must be on his guard against this cup of enchantments, and must look at nature with a supernatural eye. By piety alone, by conversing with the cause of nature, is he safe and commands it. And because all knowledge is assimilation to the object of knowledge, as the power or genius of nature is ecstatic, so must its science or the description of it be. The poet must be a rhapsodist: his inspiration a sort of bright casualty: his will in it only the surrender of will to the Universal Power, which will not be seen face to face, but must be received and sympathetically known. It is remarkable that we have out of the deeps of antiquity in the oracles ascribed to the half fabulous Zoroaster, a statement of this fact, which every lover and seeker of truth will recognise. "It is not proper," said Zoroaster, "to understand the Intelligible with vehemence, but if you incline your mind, you will apprehend it: not too earnestly, but bringing a pure and inquiring eye. You will not understand it as when understanding some particular thing, but with the flower of the mind. Things divine are not attainable by mortals who understand sensual things, but only the light-armed arrive at the summit."

And because ecstasy is the law and cause of nature, therefore you cannot interpret it in too high and deep a sense. Nature represents the best meaning of the wisest man. Does
the sunset landscape seem to you the place of Friendship—those purple skies and lovely waters the amphitheatre dressed and garnished only for the exchange of thought and love of the purest souls? It is that. All other meanings which base men have put on it are conjectural and false. You cannot bathe twice in the same river, said Heraclitus; and I add, a man never sees the same object twice: with his own enlargement the object acquires new aspects.

Does not the same law hold for virtue? It is vitiated by too much will. He who aims at progress should aim at an infinite, not at a special benefit. The reforms whose fame now fills the land with Temperance, Anti-Slavery, Non-Resistance, No Government, Equal Labour, fair and generous as each appears, are poor bitter things when prosecuted for themselves as an end. To every reform, in proportion to its energy, early disgusts are incident, so that the disciple is surprised at the very hour of his first triumphs, with chagrins, and sickness, and a general distrust: so that he shuns his associates, hates the enterprise which lately seemed so fair, and meditates to cast himself into the arms of that society and manner of life which he had newly abandoned with so much pride and hope. Is it that he attached the value of virtue to some particular practices, as, the denial of certain appetites in certain specified indulgences, and, afterward, found himself still as wicked and as far from happiness in that abstinence, as he had been in the abuse? But the soul can be appeased not by a deed but by a tendency. It is in a hope that she feels her wings. You shall love rectitude and not the disuse of money or the avoidance of trade: an unimpeded mind, and not a monkish diet; sympathy and usefulness, and not hoeing or cooperering. Tell me not how great your project is, the civil liberation of the world, its conversion into a Christian church, the establishment of public education, cleaner diet, a new division of labour and of land, laws of love for laws of property;—I say to you plainly there is no end to which your practical faculty can aim, so sacred or so large, that, if pursued for itself, will not at last become carrion and an offence to the nostril. The imaginative faculty of the soul must be fed with objects immense and eternal. Your end should be one inapprehensible to the senses; then will it be a god always approached—never touched; always giving health. A man adorns himself with
prayer and love, as an aim adorns an action. What is strong
but goodness, and what is energetic but the presence of a
brave man? The doctrine in vegetable physiology of the
presence, or the general influence of any substance over and
above its chemical influence as of an alkali or a living plant,
is more predicable of man. You need not speak to me, I
need not go where you are, that you should exert magnetism
on me. Be you only whole and sufficient, and I shall feel you
in every part of my life and fortune, and I can as easily dodge
the gravitation of the globe as escape your influence.

But there are other examples of this total and supreme
influence, besides Nature and the conscience. "From the
poisonous tree, the world," say the Brahmins, "two species
of fruit are produced, sweet as the waters of life, Love or the
society of beautiful souls, and Poetry, whose taste is like the
immortal juice of Vishnu." What is Love, and why is it the
chief good, but because it is an overpowering enthusiasm?
Never self-possessed or prudent, it is all abandonment. Is
it not a certain admirable wisdom, preferable to all other
advantages, and whereof all others are only secondaries and
indemnities? because this is that in which the individual is
no longer his own foolish master, but inhales an odorous and
celestial air, is wrapped round with awe of the object, blend-
ing for the time that object with the real and only good,
and consults every omen in nature with tremulous interest.
When we speak truly—is not he only unhappy who is not in
love? his fancied freedom and self-rule—is it not so much
death? He who is in love is wise and is becoming wiser,
sees newly every time he looks at the object beloved, draw-
ing from it with his eyes and his mind those virtues which it
possesses. Therefore if the object be not itself a living and
expanding soul, he presently exhausts it. But the love
remains in his mind, and the wisdom it brought him: and
it craves a new and higher object. And the reason why all
men honour love, is because it looks up and not down;
aspires and not despairs.

And what is Genius but inner love, a love impersonal, a love
of the flower and perfection of things, and a desire to draw a
new picture or copy of the same? It looks to the cause and
life: it proceeds from within outward, whilst Talent goes
from without inward. Talent finds its models, methods, and
ends, in society, exists for exhibition, and goes to the soul
The Method of Nature

only for power to work. Genius is its own end, and draws its means and the style of its architecture from within, going abroad only for audience, and spectator, as we adapt our voice and phrase to the distance and character of the ear we speak to. All your learning of all literatures would never enable you to anticipate one of its thoughts and expressions, and yet each is natural and familiar as household words. Here about us coils for ever the ancient enigma, so old and so unutterable. Behold! there is the sun, and the rain, and the rocks: the old sun, the old stones. How easy were it to describe all this fitly; yet no word can pass. Nature is a mute, and man, her articulate speaking brother, lo! he also is a mute. Yet when Genius arrives, its speech is like a river; it has no straining to describe, more than there is straining in nature to exist. When thought is best, there is most of it. Genius sheds wisdom like perfume, and advertises us that it flows out of a deeper source than the foregoing silence, that it knows so deeply and speaks so musically, because it is itself a mutation of the thing it describes. It is sun and moon and wave and fire in music, as astronomy is thought and harmony in masses of matter.

What is all history but the work of ideas, a record of the incomputable energy which his infinite aspirations infuse into man? Has anything grand and lasting been done? Who did it? Plainly not any man, but all men: it was the prevalence and inundation of an idea. What brought the pilgrims here? One man says, civil liberty; another, the desire of founding a church; and a third discovers that the motive force was plantation and trade. But if the Puritans could rise from the dust, they could not answer. It is to be seen in what they were, and not in what they designed; it was the growth and expansion of the human race, and resembled herein the sequent Revolution, which was not begun in Concord, or Lexington, or Virginia, but was the overflowing of the sense of natural right in every clear and active spirit of the period. Is a man boastful and knowing, and his own master?—we turn from him without hope: but let him be filled with awe and dread before the Vast and the Divine, which uses him glad to be used, and our eye is riveted to the chain of events. What a debt is ours to that old religion which, in the childhood of most of us, still dwelt like a Sabbath morning in the country of New England, teaching
privation, self-denial, and sorrow! A man was born not for prosperity, but to suffer for the benefit of others, like the noble rock-maple which all around our villages bleeds for the service of man. Not praise, not men’s acceptance of our doing, but the spirit’s holy errand through us absorbed the thought. How dignified was this! How all that is called talents and success, in our noisy capitals, becomes buzz and din before this man-worthiness! How our friendships and the complaisances we use, shame us now! Shall we not quit our companions, as if they were thieves and pot-companions, and betake ourselves to some desert cliff of Mount Katahdin, some unvisited recess in Moosehead Lake, to bewail our innocency and to recover it, and with it the power to communicate again with these sharers of a more sacred idea?

And what is to replace for us the piety of that race? We cannot have theirs: it glides away from us day by day, but we also can bask in the great morning which rises for ever out of the eastern sea, and be ourselves the children of the light. I stand here to say, Let us worship the mighty and transcendent Soul. It is the office, I doubt not, of this age to annul that adulterous divorce which the superstition of many ages has effected between the intellect and holiness. The lovers of goodness have been one class, the students of wisdom another, as if either could exist in any purity without the other. Truth is always holy, holiness always wise. I will that we keep terms with sin, and a sinful literature and society, no longer, but live a life of discovery and performance. Accept the intellect, and it will accept us. Be the lowly ministers of that pure omniscience, and deny it not before men. It will burn up all profane literature, all base current opinions, all the false powers of the world, as in a moment of time. I draw from nature the lesson of an intimate divinity. Our health and reason as men needs our respect to this fact, against the heedlessness and against the contradiction of society. The sanity of man needs the poise of this immanent force. His nobility needs the assurance of this inexhaustible reserved power. How great soever have been its bounties, they are a drop to the sea whence they flow. If you say, "the acceptance of the vision is also the act of God:"—I shall not seek to penetrate the mystery, I admit the force of what you say. If you ask, "How can any rules be given for
the attainment of gifts so sublime?" I shall only remark that the solicitations of this spirit, as long as there is life, are never forborne. Tenderly, tenderly, they woo and court us from every object in nature, from every fact in life, from every thought in the mind. The one condition coupled with the gift of truth is its use. That man shall be learned who reduceth his learning to practice. Emanuel Swedenborg affirmed that it was opened to him, "that the spirits who knew truth in this life, but did it not, at death shall lose their knowledge." "If knowledge," said Ali the Caliph, "calleth unto practice, well; if not, it goeth away." The only way into nature is to enact our best insight. Instantly we are higher poets, and can speak a deeper law. Do what you know, and perception is converted into character, as islands and continents were built by invisible infusories, or, as these forest leaves absorb light, electricity, and volatile gases, and the gnarled oak to live a thousand years is the arrest and fixation of the most volatile and ethereal currents. The doctrine of this Supreme Presence is a cry of joy and exultation. Who shall dare think he has come late into nature, or has missed anything excellent in the past, who seeth the admirable stars of possibility, and the yet untouched continent of hope glittering with all its mountains in the vast West? I praise with wonder this great reality, which seems to drown all things in the deluge of its light. What man seeing this, can lose it from his thoughts, or entertain a meamer subject? The entrance of this into his mind seems to be the birth of man. We cannot describe the natural history of the soul, but we know that it is divine. I cannot tell if these wonderful qualities which house to-day in this mortal frame, shall ever re-assemble in equal activity in a similar frame, or whether they have before had a natural history like that of this body you see before you; but this one thing I know, that these qualities did not now begin to exist, cannot be sick with my sickness, nor buried in any grave; but that they circulate through the Universe: before the world was, they were. Nothing can bar them out, or shut them in, but they penetrate the ocean and land, space and time, form and essence, and hold the key to universal nature. I draw from this faith courage and hope. All things are known to the soul. It is not to be surprised by any communication. Nothing can be greater than it. Let
those fear and those fawn who will. The soul is in her native realm, and it is wider than space, older than time, wide as hope, rich as love. Pusillanimity and fear she refuses with a beautiful scorn: they are not for her who putteth on her coronation robes, and goes out through universal love to universal power.
THOREAU

Henry David Thoreau was the last male descendant of a French ancestor who came to this country from the Isle of Guernsey. His character exhibited occasional traits drawn from this blood, in singular combination with a very strong Saxon genius.

He was born in Concord, Massachusetts, on the 12th of July, 1817. He was graduated at Harvard College in 1837, but without any literary distinction. An iconoclast in literature, he seldom thanked colleges for their service to him, holding them in small esteem, whilst yet his debt to them was important. After leaving the University, he joined his brother in teaching a private school, which he soon renounced. His father was a manufacturer of lead-pencils, and Henry applied himself for a time to this craft, believing he could make a better pencil than was then in use. After completing his experiments, he exhibited his work to chemists and artists in Boston, and having obtained their certificates to its excellence and to its equality with the best London manufacture, he returned home contented. His friends congratulated him that he had now opened his way to fortune. But he replied, that he should never make another pencil. "Why should I? I would not do again what I have done once." He resumed his endless walks and miscellaneous studies, making every day some new acquaintance with Nature, though as yet never speaking of zoölogy or botany, since, though very studious of natural facts, he was incurious of technical and textual science.

At this time, a strong, healthy youth, fresh from college, whilst all his companions were choosing their profession, or eager to begin some lucrative employment, it was inevitable that his thoughts should be exercised on the same question, and it required rare decision to refuse all the accustomed paths and keep his solitary freedom at the cost of disappointing the natural expectations of his family and friends: all the
more difficult that he had a perfect probity, was exact in securing his own independence, and in holding every man to the like duty. But Thoreau never faltered. He was a born protestant. He declined to give up his large ambition of knowledge and action for any narrow craft or profession, aiming at a much more comprehensive calling, the art of living well. If he slighted and defied the opinions of others, it was only that he was more intent to reconcile his practice with his own belief. Never idle or self-indulgent, he preferred, when he wanted money, earning it by some piece of manual labour agreeable to him, as building a boat or a fence, planting, grafting, surveying, or other short work, to any long engagements. With his hardy habits and few wants, his skill in wood-craft, and his powerful arithmetic, he was very competent to live in any part of the world. It would cost him less time to supply his wants than another. He was therefore secure of his leisure.

A natural skill for mensuration, growing out of his mathematical knowledge and his habit of ascertaining the measures and distances of objects which interested him, the size of trees, the depth and extent of ponds and rivers, the height of mountains, and the air-line distance of his favourite summits,—this, and his intimate knowledge of the territory about Concord, made him drift into the profession of land-surveyor. It had the advantage for him that it led him continually into new and secluded grounds, and helped his studies of Nature. His accuracy and skill in this work were readily appreciated, and he found all the employment he wanted.

He could easily solve the problems of the surveyor, but he was daily beset with graver questions, which he manfully confronted. He interrogated every custom, and wished to settle all his practice on an ideal foundation. He was a protestant à l'outrance, and few lives contain so many renunciations. He was bred to no profession; he never married; he lived alone; he never went to church; he never voted; he refused to pay a tax to the State; he ate no flesh, he drank no wine, he never knew the use of tobacco; and, though a naturalist, he used neither trap nor gun. He chose, wisely, no doubt, for himself, to be the bachelor of thought and Nature. He had no talent for wealth, and knew how to be poor without the least hint of squalor or inelegance. Per-
haps he fell into his way of living without forecasting it much, but approved it with later wisdom. "I am often reminded," he wrote in his journal, "that, if I had bestowed on me the wealth of Cræsus, my aims must be still the same, and my means essentially the same." He had no temptations to fight against,—no appetites, no passions, no taste for elegant trifles. A fine house, dress, the manners and talk of highly cultivated people were all thrown away on him. He much preferred a good Indian, and considered these refinements as impediments to conversation, wishing to meet his companion on the simplest terms. He declined invitations to dinner-parties, because there each was in every one's way, and he could not meet the individuals to any purpose. "They make their pride," he said, "in making their dinner cost much; I make my pride in making my dinner cost little." When asked at table what dish he preferred, he answered, "The nearest." He did not like the taste of wine, and never had a vice in his life. He said,—"I have a faint recollection of pleasure derived from smoking dried lily-stems, before I was a man. I had commonly a supply of these. I have never smoked anything more noxious."

He chose to be rich by making his wants few, and supplying them himself. In his travels, he used the railroad only to get over so much country as was unimportant to the present purpose, walking hundreds of miles, avoiding taverns, buying a lodging in farmers' and fishermen's houses, as cheaper, and more agreeable to him, and because there he could better find the men and the information he wanted.

There was somewhat military in his nature, not to be subdued, always manly and able, but rarely tender, as if he did not feel himself except in opposition. He wanted a fallacy to expose, a blunder to pillory, I may say required a little sense of victory, a roll of the drum, to call his powers into full exercise. It cost him nothing to say No; indeed, he found it much easier than to say Yes. It seemed as if his first instinct on hearing a proposition was to controvert it, so impatient was he of the limitations of our daily thought. This habit, of course, is a little chilling to the social affections; and though the companion would in the end acquit him of any malice or untruth, yet it mars conversation. Hence, no equal companion stood in affectionate relations with one so pure and guileless. "I love Henry," said one of his friends,
"but I cannot like him; and as for taking his arm, I should as soon think of taking the arm of an elm-tree."

Yet, hermit and stoic as he was, he was really fond of sympathy, and threw himself heartily and childlike into the company of young people whom he loved, and whom he delighted to entertain, as he only could, with the varied and endless anecdotes of his experiences by field and river. And he was always ready to lead a huckleberry-party or a search for chestnuts or grapes. Talking, one day, of a public discourse, Henry remarked, that whatever succeeded with the audience was bad. I said, "Who would not like to write something which all can read, like Robinson Crusoe? and who does not see with regret that his page is not solid with a right materialistic treatment, which delights everybody?" Henry objected, of course, and vaunted the better lectures which reached only a few persons. But, at supper, a young girl, understanding that he was to lecture at the Lyceum, sharply asked him, "whether his lecture would be a nice, interesting story, such as she wished to hear, or whether it was one of those old philosophical things that she did not care about." Henry turned to her, and bethought himself, and, I saw, was trying to believe that he had matter that might fit her and her brother, who were to sit up and go to the lecture, if it was a good one for them.

He was a speaker and actor of the truth,—born such,—and was ever running into dramatic situations from this cause. In any circumstance, it interested all bystanders to know what part Henry would take, and what he would say; and he did not disappoint expectation, but used an original judgment on each emergency. In 1845 he built himself a small framed house on the shores of Walden Pond, and lived there two years alone, a life of labour and study. This action was quite native and fit for him. No one who knew him would tax him with affectation. He was more unlike his neighbours in his thought than in his action. As soon as he had exhausted the advantages of that solitude, he abandoned it. In 1847, not approving some uses to which the public expenditure was applied, he refused to pay his town tax, and was put in jail. A friend paid the tax for him, and he was released. The like annoyance was threatened the next year. But, as his friends paid the tax, notwithstanding his protest, I believe he ceased to resist. No opposition or ridicule had
any weight with him. He coldly and fully stated his opinion of the company. It was of no consequence, if every one present held the opposite opinion. On one occasion he went to the University Library to procure some books. The librarian refused to lend them. Mr. Thoreau repaired to the President, who stated to him the rules and usages, which permitted the loan of books to resident graduates, to clergy-men who were alumni, and to some others resident within a circle of ten miles' radius from the College. Mr. Thoreau explained to the President that the railroad had destroyed the old scale of distances,—that the library was useless, yes, and President and College useless, on the terms of his rules,—that the one benefit he owed to the College was its library,—that, at this moment, not only his want of books was imperative, but he wanted a large number of books, and assured him that he, Thoreau, and not the librarian, was the proper custodian of these. In short, the President found the petitioner so formidable, and the rules getting to look so ridiculous, that he ended by giving him a privilege which in his hands proved unlimited thereafter.

No truer American existed than Thoreau. His preference of his country and condition was genuine, and his aversion from English and European manners and tastes almost reached contempt. He listened impatiently to news or bon mots gleaned from London circles; and though he tried to be civil, these anecdotes fatigued him. The men were all imitating each other, and on a small mould. Why can they not live as far apart as possible, and each be a man by himself? What he sought was the most energetic nature; and he wished to go to Oregon, not to London. "In every part of Great Britain," he wrote in his diary, "are discovered traces of the Romans, their funeral urns, their camps, their roads, their dwellings. But New England, at least, is not based on any Roman ruins. We have not to lay the foundations of our houses on the ashes of a former civilisation."

But, idealist as he was, standing for abolition of slavery, abolition of tariffs, almost for abolition of government, it is needless to say he found himself not only unrepresented in actual politics, but almost equally opposed to every class of reformers. Yet he paid the tribute of his uniform respect to the Anti-Slavery party. One man, whose personal acquaintance he had formed, he honoured with exceptional
regard. Before the first friendly word had been spoken for Captain John Brown, he sent notices to most houses in Concord, that he would speak in a public hall on the condition and character of John Brown, on Sunday evening, and invited all people to come. The Republican Committee, the Abolitionist Committee, sent him word that it was premature and not advisable. He replied,—"I did not send to you for advice, but to announce that I am to speak." The hall was filled at an early hour by people of all parties, and his earnest eulogy of the hero was heard by all respectfully, by many with a sympathy that surprised themselves.

It was said of Plotinus that he was ashamed of his body, and 'tis very likely he had good reason for it,—that his body was a bad servant, and he had not skill in dealing with the material world, as happens often to men of abstract intellect. But Mr. Thoreau was equipped with a most adapted and serviceable body. He was of short stature, firmly built, of light complexion, with strong, serious blue eyes, and a grave aspect,—his face covered in the late years with a becoming beard. His senses were acute, his frame well-knit and hardy, his hands strong and skilful in the use of tools. And there was a wonderful fitness of body and mind. He could pace sixteen rods more accurately than another man could measure them with rod and chain. He could find his path in the woods at night, he said, better by his feet than his eyes. He could estimate the measure of a tree very well by his eye; he could estimate the weight of a calf or a pig, like a dealer. From a box containing a bushel or more of loose pencils, he could take up with his hands fast enough just a dozen pencils at every grasp. He was a good swimmer, runner, skater, boatman, and would probably outwalk most countrymen in a day's journey. And the relation of body to mind was still finer than we have indicated. He said he wanted every stride his legs made. The length of his walk uniformly made the length of his writing. If shut up in the house, he did not write at all.

He had a strong common sense, like that which Rose Flammock, the weaver's daughter, in Scott's romance, commends in her father, as resembling a yardstick, which, whilst it measures dowlas and diaper, can equally well measure tapestry and cloth of gold. He had always a new resource. When I was planting forest trees, and had pro-
cured half a peck of acorns, he said that only a small portion of them would be sound, and proceeded to examine them, and select the sound ones. But finding this took time, he said, “I think if you put them all into water the good ones will sink;” which experiment we tried with success. He could plan a garden, or a house, or a barn; would have been competent to lead a “Pacific Exploring Expedition;” could give judicious counsel in the gravest private or public affairs.

He lived for the day, not cumbered and mortified by his memory. If he brought you yesterday a new proposition, he would bring you to-day another not less revolutionary. A very industrious man, and setting, like all highly organised men, a high value on his time, he seemed the only man of leisure in town, always ready for any excursion that promised well, or for conversation prolonged into late hours. His trenchant sense was never stopped by his rules of daily prudence, but was always up to the new occasion. He liked and used the simplest food, yet, when some one urged a vegetable diet, Thoreau thought all diets a very small matter, saying that “the man who shoots the buffalo lives better than the man who boards at the Graham House.” He said, —“You can sleep near the railroad, and never be disturbed: Nature knows very well what sounds are worth attending to, and has made up her mind not to hear the railroad-whistle. But things respect the devout mind, and a mental ecstasy was never interrupted.” He noted, what repeatedly befell him, that, after receiving from a distance a rare plant, he would presently find the same in his own haunts. And those pieces of luck which happen only to good players happened to him. One day, walking with a stranger, who inquired where Indian arrow-heads could be found, he replied, “Everywhere,” and, stooping forward, picked one on the instant from the ground. At Mount Washington, in Tuckerman’s Ravine, Thoreau had a bad fall, and sprained his foot. As he was in the act of getting up from his fall, he saw for the first time the leaves of the Arnica mollis.

His robust common sense, armed with stout hands, keen perceptions, and strong will, cannot yet account for the superiority which shone in his simple and hidden life. I must add the cardinal fact, that there was an excellent wisdom in him, proper to a rare class of men, which showed him the material world as a means and symbol. This dis-
covery, which sometimes yields to poets a certain casual and interrupted light, serving for the ornament of their writing, was in him an unsleeping insight; and whatever faults or obstructions of temperament might cloud it, he was not disobedient to the heavenly vision. In his youth, he said, one day, "The other world is all my art; my pencils will draw no other; my jack-knife will cut nothing else; I do not use it as a means." This was the muse and genius that ruled his opinions, conversation, studies, work, and course of life. This made him a searching judge of men. At first glance he measured his companion, and, though insensible to some fine traits of culture, could very well report his weight and calibre. And this made the impression of genius which his conversation sometimes gave.

He understood the matter in hand at a glance, and saw the limitations and poverty of those he talked with, so that nothing seemed concealed from such terrible eyes. I have repeatedly known young men of sensibility converted in a moment to the belief that this was the man they were in search of, the man of men, who could tell them all they should do. His own dealing with them was never affectionate, but superior, didactic,—scorning their petty ways,—very slowly conceding, or not conceding at all, the promise of his society at their houses, or even at his own. "Would he not walk with them?" "He did not know. There was nothing so important to him as his walk; he had no walks to throw away on company." Visits were offered him from respectful parties, but he declined them. Admiring friends offered to carry him at their own cost to the Yellow-Stone River,—to the West Indies,—to South America. But though nothing could be more grave or considered than his refusals, they remind one in quite new relations of that fop Brummel's reply to the gentleman who offered him his carriage in a shower, "But where will you ride, then?"—and what accusing silences, and what searching and irresistible speeches, battering down all defences, his companions can remember!

Mr. Thoreau dedicated his genius with such entire love to the fields, hills, and waters of his native town, that he made them known and interesting to all reading Americans, and to people over the sea. The river on whose banks he was born and died he knew from its springs to its confluence
with the Merrimack. He had made summer and winter observations on it for many years, and at every hour of the day and night. The result of the recent survey of the Water Commissioners appointed by the State of Massachusetts he had reached by his private experiments, several years earlier. Every fact which occurs in the bed, on the banks, or in the air over it; the fishes, and their spawning and nests, their manners, their food; the shad-flies which fill the air on a certain evening once a year, and which are snapped at by the fishes so ravenously that many of these die of repletion; the conical heaps of small stones on the river-shallows, one of which heaps will sometimes overfill a cart—these heaps the huge nests of small fishes; the birds which frequent the stream, heron, duck, sheldrake, loon, osprey; the snake, muskrat, otter, woodchuck, and fox, on the banks; the turtle, frog, hyla, and cricket, which make the banks vocal,—were all known to him, and, as it were, townsmen and fellow-creatures; so that he felt an absurdity or violence in any narrative of one of these by itself apart, and still more of its dimensions on an inch-rule, or in the exhibition of its skeleton, or the specimen of a squirrel or a bird in brandy. He liked to speak of the manners of the river, as itself a lawful creature, yet with exactness, and always to an observed fact. As he knew the river, so the ponds of this region.

One of the weapons he used, more important to him than microscope or alcohol-receiver to other investigators, was a whim which grew on him by indulgence, yet appeared in gravest statement, namely, of extolling his own town and neighbourhood as the most favoured centre for natural observation. He remarked that the Flora of Massachusetts embraced almost all the important plants of America,—most of the oaks, most of the willows, the best pines, the ash, the maple, the beech, the nuts. He returned Kane’s Arctic Voyage to a friend of whom he had borrowed it, with the remark, that “most of the phenomena noted might be observed in Concord.” He seemed a little envious of the Pole, for the coincident sunrise and sunset, or five minutes’ day after six months: a splendid fact, which Annursnuc had never afforded him. He found red snow in one of his walks, and told me that he expected to find yet the Victoria regia in Concord. He was the attorney of the indigenous plants, and owned to a preference of the weeds to the imported
plants as of the Indian to the civilised man,—and noticed, with pleasure, that the willow bean-poles of his neighbour had grown more than his beans. "See these weeds," he said, "which have been hoed at by a million farmers all spring and summer, and yet have prevailed, and just now come out triumphant over all lanes, pastures, fields, and gardens, such is their vigour. We have insulted them with low names, too,—as Pigweed, Wormwood, Chickweed, Shad-Blossom." He says, "Thay have brave names, too,—Ambrosia, Stellaria, Amelanchier, Amaranth, etc."

I think his fancy for referring everything to the meridian of Concord did not grow out of any ignorance or depreciation of other longitudes or latitudes, but was rather a playful expression of his conviction of the indifferency of all places, and that the best place for each is where he stands. He expressed it once in this wise:—"I think nothing is to be hoped from you, if this bit of mould under your feet is not sweeter to you to eat than any other in this world, or in any world."

The other weapon with which he conquered all obstacles in science was patience. He knew how to sit immovable, a part of the rock he rested on, until the bird, the reptile, the fish, which had retired from him, should come back and resume its habits, nay, moved by curiosity, should come to him and watch him.

It was a pleasure and a privilege to walk with him. He knew the country like a fox or a bird, and passed through it as freely by paths of his own. He knew every track in the snow or on the ground, and what creature had taken this path before him. One must submit abjectly to such a guide, and the reward was great. Under his arm he carried an old music-book to press plants; in his pocket, his diary and pencil, a spy-glass for birds, microscope, jack-knife, and twine. He wore a straw hat, stout shoes, strong gray trousers, to brave shrub-oaks and smilax, and to climb a tree for a hawk's or a squirrel's nest. He waded into the pool for the water-plants, and his strong legs were no insignificant part of his armour. On the day I speak of he looked for the Menyanthes, detected it across the wide pool, and, on examination of the florets, decided that it had been in flower five days. He drew out of his breast-pocket his diary, and read the names of all the plants that should bloom
on this day, whereof he kept account as a banker when his notes fall due. The Cypripedium not due till to-morrow. He thought, that, if waked up from a trance, in this swamp, he could tell by the plants what time of the year it was within two days. The redstart was flying about, and presently the fine grosbeaks, whose brilliant scarlet makes the rash gazer wipe his eye, and whose fine clear note Thoreau compared to that of a tanager which has got rid of its hoarseness. Presently he heard a note which he called that of the night-warbler, a bird he had never identified, had been in search of twelve years, which always, when he saw it, was in the act of diving down into a tree or bush, and which it was vain to seek; the only bird which sings indifferently by night and by day. I told him he must beware of finding and booking it, lest life should have nothing more to show him. He said, “What you seek in vain for, half your life, one day you come full upon, all the family at dinner. You seek it like a dream, and as soon as you find it you become its prey.”

His interest in the flower or the bird lay very deep in his mind, was connected with Nature,—and the meaning of Nature was never attempted to be defined by him. He would not offer a memoir of his observations to the Natural History Society. “Why should I? To detach the description from its connections in my mind would make it no longer true or valuable to me: and they do not wish what belongs to it.” His power of observation seemed to indicate additional senses. He saw as with microscope, heard as with ear-trumpet, and his memory was a photographic register of all he saw and heard. And yet none knew better than he that it is not the fact that imports, but the impression of effect of the fact on your mind. Every fact lay in glory in his mind, a type of the order and beauty of the whole.

His determination on Natural History was organic. He confessed that he sometimes felt like a hound or a panther, and, if born among Indians, would have been a fell hunter. But, restrained by his Massachusetts culture, he played out the game in this mild form of botany and ichthyology. His intimacy with animals suggested what Thomas Fuller records of Butler the apologist, that “either he had told the bees things or the bees had told him.” Snakes coiled round his leg; the fishes swam into his hand, and he took them out of the water; he pulled the woodchuck out of its hole by the
tail and took the foxes under his protection from the hunters. Our naturalist had perfect magnanimity; he had no secrets: he would carry you to the heron's haunt, or even to his most prized botanical swamp,—possibly knowing that you could never find it again, yet willing to take his risks.

No college ever offered him a diploma, or a professor's chair; no academy made him its corresponding secretary, its discoverer, or even its member. Perhaps these learned bodies feared the satire of his presence. Yet so much knowledge of Nature's secret and genius few others possessed, none in a more large and religious synthesis. For not a particle of respect had he to the opinions of any man or body of men, but homage solely to the truth itself; and as he discovered everywhere among doctors some leaning of courtesy, it discredited them. He grew to be revered and admired by his townsmen, who had at first known him only as an oddity. The farmers who employed him as a surveyor soon discovered his rare accuracy and skill, his knowledge of their lands, of trees, of birds, of Indian remains, and the like, which enabled him to tell every farmer more than he knew before of his own farm; so that he began to feel a little as if Mr. Thoreau had better rights in his land than he. They felt, too, the superiority of character which addressed all men with a native authority.

Indian relics abound in Concord,—arrow-heads, stone chisels, pestles, and fragments of pottery; and on the river-bank, large heaps of clam-shells and ashes mark spots which the savages frequented. These, and every circumstance touching the Indian, were important in his eyes. His visits to Maine were chiefly for love of the Indian. He had the satisfaction of seeing the manufacture of the bark-canoe, as well as of trying his hand in its management on the rapids. He was inquisitive about the making of the stone arrow-head, and in his last days charged a youth setting out for the Rocky Mountains to find an Indian who could tell him that: "It was well worth a visit to California to learn it." Occasionally, a small party of Penobscot Indians would visit Concord, and pitch their tents for a few weeks in summer on the river-bank. He failed not to make acquaintance with the best of them; though he well knew that asking questions of Indians is like catechising beavers and rabbits. In his last visit to Maine he had great satisfaction from Joseph Polis, an
intelligent Indian of Oldtown, who was his guide for some weeks.

He was equally interested in every natural fact. The depth of his perception found likeness of law throughout Nature, and I know not any genius who so swiftly inferred universal law from the single fact. He was no pedant of a department. His eye was open to beauty, and his ear to music. He found these, not in rare conditions, but where-soever he went. He thought the best of music was in single strains; and he found poetic suggestion in the humming of the telegraph-wire.

His poetry might be bad or good; he no doubt wanted a lyric facility and technical skill, but he had the source of poetry in his spiritual perception. He was a good reader and critic, and his judgment on poetry was to the ground of it. He could not be deceived as to the presence or absence of the poetic element in any composition, and his thirst for this made him negligent and perhaps scornful of superficial graces. He would pass by many delicate rhythms, but he would have detected every live stanza or line in a volume, and knew very well where to find an equal poetic charm in prose. He was so enamoured of the spiritual beauty that he held all actual written poems in very light esteem in the comparison. He admired Æschylus and Pindar; but, when some one was commending them, he said that Æschylus and the Greeks, in describing Apollo and Orpheus, had given no song, or no good one. "They ought not to have moved trees, but to have chanted to the gods such a hymn as would have sung all their old ideas out of their heads, and new ones in." His own verses are often rude and defective. The gold does not yet run pure, is drossy and crude. The thyme and marjoram are not yet honey. But if he want lyric fineness and technical merits, if he have not the poetic temperament, he never lacks the causal thought, showing that his genius was better than his talent. He knew the worth of the Imagination for the uplifting and consolation of human life, and liked to throw every thought into a symbol. The fact you tell is of no value, but only the impression. For this reason his presence was poetic, always piqued the curiosity to know more deeply the secrets of his mind. He had many reserves, an unwillingness to exhibit to profane eyes what was still sacred in his own, and knew well how to throw a poetic veil
over his experience. All readers of *Walden* will remember his mythical record of his disappointments:

"I long ago lost a hound, a bay horse, and a turtle-dove, and am still on their trail. Many are the travellers I have spoken concerning them, describing their tracks, and what calls they answered to. I have met one or two who had heard the hound, and the tramp of the horse, and even seen the dove disappear behind a cloud; and they seemed as anxious to recover them as if they had lost them themselves." ¹

His riddles were worth the reading, and I confide, that, if at any time I do not understand the expression, it is yet just. Such was the wealth of his truth that it was not worth his while to use words in vain. His poem entitled "Sympathy" reveals the tenderness under that triple steel of stoicism, and the intellectual subtility it could animate. His classic poem on "Smoke" suggests Simonides, but is better than any poem of Simonides. His biography is in his verses. His habitual thought makes all his poetry a hymn to the Cause of causes, the Spirit which vivifies and controls his own:

"I hearing get, who had but ears,
And sight, who had but eyes before;
I moments live, who lived but years,
And truth discern, who knew but learning's lore."

And still more in these religious lines:

"Now chiefly is my natal hour,
And only now my prime of life;
I will not doubt the love untold,
Which not my worth or want hath bought,
Which wooed me young, and woos me old,
And to this evening hath me brought."

Whilst he used in his writings a certain petulance of remark in reference to churches or churchmen, he was a person of a rare, tender, and absolute religion, a person incapable of any profanation, by act or by thought. Of course, the same isolation which belonged to his original thinking and living detached him from the social religious forms. This is neither to be censured nor regretted. Aristotle long ago explained it, when he said, "One who surpasses his fellow-citizens in virtue is no longer a part of the city. Their law is not for him, since he is a law to himself."

¹ *Walden*; p. 20.
Thoreau was sincerity itself, and might fortify the convictions of prophets in the ethical laws by his holy living. It was an affirmative experience which refused to be set aside. A truth-speaker he, capable of the most deep and strict conversation; a physician to the wounds of any soul; a friend, knowing not only the secret of friendship, but almost worshipped by those few persons who resorted to him as their confessor and prophet, and knew the deep value of his mind and great heart. He thought that without religion or devotion of some kind nothing great was ever accomplished: and he thought that the bigoted sectarian had better bear this in mind.

His virtues, of course, sometimes ran into extremes. It was easy to trace to the inexorable demand on all for exact truth that austerity which made this willing hermit more solitary even than he wished. Himself of a perfect probity, he required not less of others. He had a disgust at crime, and no worldly success would cover it. He detected paltering as readily in dignified and prosperous persons as in beggars, and with equal scorn. Such dangerous frankness was in his dealing that his admirers called him "that terrible Thoreau," as if he spoke when silent, and was still present when he had departed. I think the severity of his ideal interfered to deprive him of a healthy sufficiency of human society.

The habit of a realist to find things the reverse of their appearance inclined him to put every statement in a paradox. A certain habit of antagonism defaced his earlier writings,—a trick of rhetoric not quite outgrown in his later, of substituting for the obvious word and thought its diametrical opposite. He praised wild mountains and winter forests for their domestic air, in snow and ice he would find sultriness, and commended the wilderness for resembling Rome and Paris. "It was so dry, that you might call it wet."

The tendency to magnify the moment, to read all the laws of Nature in the one object or one combination under your eye, is of course comic to those who do not share the philosopher's perception of identity. To him there was no such thing as size. The pond was a small ocean; the Atlantic, a large Walden Pond. He referred every minute fact to cosmical laws. Though he meant to be just, he seemed haunted by a certain chronic assumption that the science of the day pretended completeness, and he had just found out
that the *savans* had neglected to discriminate a particular botanical variety, had failed to describe the seeds or count the sepals. "That is to say," we replied, "the blockheads were not born in Concord; but who said they were? It was their unspeakable misfortune to be born in London, or Paris, or Rome; but, poor fellows, they did what they could, considering that they never saw Bateman's Pond, or Nine-Acre Corner, or Becky Stow's Swamp; besides, what were you sent into the world for, but to add this observation?"

Had this genius been only contemplative, he had been fitted to his life, but with his energy and practical ability he seemed born for great enterprise and for command; and I so much regret the loss of his rare powers of action, that I cannot help counting it a fault in him that he had no ambition. Wanting this, instead of engineering for all America, he was the captain of a huckleberry-party. Pounding beans is good to the end of pounding empires one of these days; but if, at the end of years, it is still only beans!

But these foibles, real or apparent, were fast vanishing in the incessant growth of a spirit so robust and wise, and which effaced its defeats with new triumphs. His study of Nature was a perpetual ornament to him, and inspired his friends with curiosity to see the world through his eyes, and to hear his adventures. They possessed every kind of interest.

He had many elegancies of his own, whilst he scoffed at conventional elegance. Thus, he could not bear to hear the sound of his own steps, the grit of gravel; and therefore never willingly walked in the road, but in the grass, on mountains and in woods. His senses were acute, and he remarked that by night every dwelling-house gives out bad air, like a slaughter-house. He liked the pure fragrance of melilot. He honoured certain plants with special regard, and, over all, the pond-lily,—then, the gentian, and the *Mikania scandens*, and "life-everlasting," and a bass-tree which he visited every year when it bloomed, in the middle of July. He thought the scent a more oracular inquisition than the sight,—more oracular and trustworthy. The scent, of course, reveals what is concealed from the other senses. By it he detected earthiness. He delighted in echoes, and said they were almost the only kind of kindred voices that he heard. He loved Nature so well, was so happy in her solitude, that he became very jealous of cities and the sad work which their
refinements and artifices made with man and his dwelling. The axe was always destroying his forest. "Thank God," he said, "they cannot cut down the clouds!" "All kinds of figures are drawn on the blue ground with this fibrous white paint."

I subjoin a few sentences taken from his unpublished manuscripts, not only as records of his thought and feeling, but for their power of description and literary excellence.

"Some circumstantial evidence is very strong, as when you find a trout in the milk."

"The chub is a soft fish, and tastes like boiled brown paper salted."

"The youth gets together his materials to build a bridge to the moon, or, perchance, a palace or temple on the earth, and, at length the middle-aged man concludes to build a wood-shed with them."

"The locust z-ing."

"Devil's-needles zigzagging along the Nut-Meadow brook."

"Sugar is not so sweet to the palate as sound to the healthy ear."

"I put on some hemlock-boughs, and the rich salt crackling of their leaves was like mustard to the ear, the crackling of uncountable regiments. Dead trees love the fire."

"The bluebird carries the sky on his back."

"The tanager flies through the green foliage as if it would ignite the leaves."

"If I wish for a horse-hair for my compass-sight I must go to the stable; but the hair-bird, with her sharp eyes, goes to the road."

"Immortal water, alive even to the superficies."

"Fire is the most tolerable third party."

"Nature made ferns for pure leaves, to show what she could do in that line."

"No tree has so fair a bole and so handsome an instep as the beech."

"How did these beautiful rainbow-tints get into the shell of the fresh-water clam, buried in the mud at the bottom of our dark river?"

"Hard are the times when the infant's shoes are second-foot."
"We are strictly confined to our men to whom we give liberty."

"Nothing is so much to be feared as fear. Atheism may comparatively be popular with God himself."

"Of what significance the things you can forget? A little thought is sexton to all the world."

"How can we expect a harvest of thought who have not had a seed-time of character?"

"Only he can be trusted with gifts who can present a face of bronze to expectations."

"I ask to be melted. You can only ask of the metals that they be tender to the fire that melts them. To nought else can they be tender."

There is a flower known to botanists, one of the same genus with our summer plant called "Life-Everlasting," a *Gnaphalium* like that, which grows on the most inaccessible cliffs of the Tyrolese mountains, where the chamois dare hardly venture, and which the hunter, tempted by its beauty, and by his love, (for it is immensely valued by the Swiss maidens,) climbs the cliffs to gather, and is sometimes found dead at the foot, with the flower in his hand. It is called by botanists the *Gnaphalium leontopodium*, but by the Swiss *Edelweisse*, which signifies *Noble Purity*. Thoreau seemed to me living in the hope to gather this plant, which belonged to him of right. The scale on which his studies proceeded was so large as to require longevity, and we were the less prepared for his sudden disappearance. The country knows not yet, or in the least part, how great a son it has lost. It seems an injury that he should leave in the midst his broken task, which none else can finish,—a kind of indignity to so noble a soul that he should depart out of Nature before yet he has been really shown to his peers for what he is. But he, at least, is content. His soul was made for the noblest society; he had in a short life exhausted the capabilities of this world; wherever there is knowledge, wherever there is virtue, wherever there is beauty, he will find a home.
MILTON

The discovery of the lost work of Milton, the treatise *Of the Christian Doctrine*, in 1823, drew a sudden attention to his name. For a short time the literary journals were filled with disquisitions on his genius; new editions of his works, and new compilations of his life, were published. But the new-found book having in itself less attraction than any other work of Milton, the curiosity of the public as quickly subsided, and left the poet to the enjoyment of his permanent fame, or to such increase or abatement of it only as is incidental to a sublime genius, quite independent of the momentary challenge of universal attention to his claims.

But if the new and temporary renown of the poet is silent again, it is nevertheless true that he has gained, in this age, some increase of permanent praise. The fame of a great man is not rigid and stony like his bust. It changes with time. It needs time to give it due perspective. It was very easy to remark an altered tone in the criticism when Milton reappeared as an author, fifteen years ago, from any that had been bestowed on the same subject before. It implied merit indisputable and illustrious; yet so near to the modern mind as to be still alive and life-giving. The aspect of Milton, to this generation, will be part of the history of the nineteenth century. There is no name in English literature between his age and ours that rises into any approach to his own. And as a man’s fame, of course, characterises those who give it, as much as him who receives it, the new criticism indicated a change in the public taste, and a change which the poet himself might claim to have wrought.

The reputation of Milton had already undergone one or two revolutions long anterior to its recent aspects. In his lifetime, he was little or not at all known as a poet, but obtained great respect from his contemporaries as an accomplished scholar and a formidable pamphleteer. His poem fell unregarded among his countrymen. His prose writings,
especially the *Defence of the English People*, seem to have been read with avidity. These tracts are remarkable compositions. They are earnest, spiritual, rich with allusion, sparkling with innumerable ornaments; but, as writings designed to gain a practical point, they fail. They are not effective, like similar productions of Swift and Burke; or, like what became also controversial tracts, several masterly speeches in the history of the American Congress. Milton seldom deigns a glance at the obstacles that are to be overcome before that which he proposes can be done. There is no attempt to conciliate,—no mediate, no preparatory course suggested,—but, peremptory and impassioned, he demands, on the instant, an ideal justice. Therein they are discriminated from modern writings, in which a regard to the actual is all but universal.

Their rhetorical excellence must also suffer some deduction. They have no perfectness. These writings are wonderful for the truth, the learning, the subtilty and pomp of the language; but the whole is sacrificed to the particular. Eager to do fit justice to each thought, he does not subordinate it so as to project the main argument. He writes whilst he is heated; the piece shows all the rambles and resources of indignation, but he has never *integrated* the parts of the argument in his mind. The reader is fatigued with admiration, but is not yet master of the subject.

Two of his pieces may be excepted from this description, one for its faults, the other for its excellence. The *Defence of the People of England*, on which his contemporary fame was founded, is, when divested of its pure Latinity, the worst of his works. Only its general aim, and a few elevated passages, can save it. We could be well content, if the flames to which it was condemned at Paris, at Toulouse, and at London, had utterly consumed it. The lover of his genius will always regret that he should not have taken counsel of his own lofty heart at this, as at other times, and have written from the deep convictions of love and right, which are the foundations of civil liberty. There is little poetry or prophecy in this mean and ribald scolding. To insult Salmesius, not to acquit England, is the main design. What under heaven had Madame de Saumaise, or the manner of living of Saumaise, or Salmesius, or his blunders of grammar, or his niceties of diction, to do with the solemn question
whether Charles Stuart had been rightly slain? Though it evinces learning and critical skill, yet, as an historical argument, it cannot be valued with similar disquisitions of Robertson and Hallam, and even less celebrated scholars. But, when he comes to speak of the reason of the thing, then he always recovers himself. The voice of the mob is silent, and Milton speaks. And the peroration, in which he implores his countrymen to refute this adversary by their great deeds, is in a just spirit. The other piece is his Areopagitica, the discourse, addressed to the Parliament, in favour of removing the censorship of the press; the most splendid of his prose works. It is, as Luther said of one of Melancthon's writings, "alive, hath hands and feet,—and not like Erasmus's sentences, which were made, not grown." The weight of the thought is equalled by the vivacity of the expression, and it cheers as well as teaches. This tract is far the best known and the most read of all, and is still a magazine of reasons for the freedom of the press. It is valuable in history as an argument addressed to a government to produce a practical end, and plainly presupposes a very peculiar state of society.

But deeply as that peculiar state of society, in which and for which Milton wrote, has engraved itself in the remembrance of the world, it shares the destiny which overtakes everything local and personal in nature; and the accidental facts on which a battle of principles was fought have already passed, or are fast passing, into oblivion. We have lost all interest in Milton as the redoubted disputant of a sect; but by his own innate worth this man has steadily risen in the world's reverence, and occupies a more imposing place in the mind of men at this hour than ever before.

It is the aspect which he presents to this generation, that alone concerns us. Milton the polemic has lost his popularity long ago; and if we skip the pages of Paradise Lost where "God the Father argues like a school divine," so did the next age to his own. But, we are persuaded, he kindles a love and emulation in us which he did not in foregoing generations. We think we have seen and heard criticism upon the poems, which the bard himself would have more valued than the recorded praise of Dryden, Addison, and Johnson, because it came nearer to the mark; was finer and closer appreciation; the praise of intimate knowledge and
delight; and, of course, more welcome to the poet than the general and vague acknowledgment of his genius by those able but unsympathising critics. We think we have heard the recitation of his verses by genius which found in them that which itself would say; recitation which told, in the diamond sharpness of every articulation, that now first was such perception and enjoyment possible; the perception and enjoyment of all his varied rhythm, and his perfect fusion of the classic and the English styles. This is a poet's right; for every masterpiece of art goes on for some ages reconciling the world unto itself, and despotically fashioning the public ear. The opposition to it, always greatest at first, continually decreases and at last ends; and a new race grows up in the taste and spirit of the work, with the utmost advantage for seeing intimately its power and beauty.

But it would be great injustice to Milton to consider him as enjoying merely a critical reputation. It is the prerogative of this great man to stand at this hour foremost of all men in literary history, and so (shall we not say?) of all men, in the power to inspire. Virtue goes out of him into others. Leaving out of view the pretensions of our contemporaries (always an incalculable influence), we think no man can be named whose mind still acts on the cultivated intellect of England and America with an energy comparable to that of Milton. As a poet, Shakespeare undoubtedly transcends, and far surpasses him in his popularity with foreign nations; but Shakespeare is a voice merely; who and what he was that sang, that sings, we know not. Milton stands erect, commanding, still visible as a man among men, and reads the laws of the moral sentiment to the new-born race. There is something pleasing in the affection with which we can regard a man who died a hundred and sixty years ago in the other hemisphere, who, in respect to personal relations, is to us as the wind, yet by an influence purely spiritual makes us jealous for his fame as for that of a near friend. He is identified in the mind with all select and holy images, with the supreme interests of the human race. If hereby we attain any more precision, we proceed to say that we think no man in these later ages, and few men ever, possessed so great a conception of the manly character. Better than any other he has discharged the office of every great man, namely, to raise the idea of Man in the minds of his contemporaries
and of posterity,—to draw after nature a life of man, exhibiting such a composition of grace, of strength, and of virtue, as poet had not described nor hero lived. Human nature in these ages is indebted to him for its best portrait. Many philosophers in England, France, and Germany, have formerly dedicated their study to this problem; and we think it impossible to recall one in those countries who communicates the same vibration of hope, of self-reverence, of piety, of delight in beauty, which the name of Milton awakens. Lord Bacon, who has written much and with prodigious ability on this science, shrinks and falters before the absolute and uncourtly Puritan. Bacon's Essays are the portrait of an ambitious and profound calculator,—a great man of the vulgar sort. Of the upper world of man's being they speak few and faint words. The man of Locke is virtuous without enthusiasm and intelligent without poetry. Addison, Pope, Hume, and Johnson, students, with very unlike temper and success, of the same subject, cannot, taken together, make any pretension to the amount or the quality of Milton's inspirations. The man of Lord Chesterfield is unworthy to touch his garment's hem. Franklin's man is a frugal, inoffensive, thrifty citizen, but savours of nothing heroic. The genius of France has not, even in her best days, yet culminated in any one head,—not in Rousseau, not in Pascal, not in Fénelon,—into such perception of all the attributes of humanity as to entitle it to any rivalry in these lists. In Germany, the greatest writers are still too recent to institute a comparison; and yet we are tempted to say that art and not life seems to be the end of their effort. But the idea of a purer existence than any he saw around him, to be realised in the life and conversation of men, inspired every act and every writing of John Milton. He defined the object of education to be, "to fit a man to perform justly, skilfully, and magnanimously all the offices, both private and public, of peace and war." He declared that "he who would aspire to write well hereafter in laudable things, ought himself to be a true poem; that is, a composition and pattern of the best and honourablest things, not presuming to sing high praises of heroic men or famous cities, unless he have in himself the experience and the practice of all that which is praiseworthy." Nor is there in literature a more noble outline of a wise external education, than that which he
drew up, at the age of thirty-six, in his Letter to Samuel Hartlib. The muscles, the nerves, and the flesh with which this skeleton is to be filled up and covered, exist in his works and must be sought there.

For the delineation of this heroic image of man, Milton enjoyed singular advantages. Perfections of body and of mind are attributed to him by his biographers, that, if the anecdotes had come down from a greater distance of time, or had not been in part furnished or corroborated by political enemies, would lead us to suspect the portraits were ideal, like the Cyrus of Xenophon, the Telemachus of Fénelon, or the popular traditions of Alfred the Great.

Handsome to a proverb, he was called the lady of his college. Aubrey says, "This harmonical and ingenuous soul dwelt in a beautiful and well-proportioned body." His manners and his carriage did him no injustice. Wood, his political opponent, relates that "his deportment was affable, his gait erect and manly, bespeaking courage and undauntedness." Aubrey adds a sharp trait, that "he pronounced the letter R very hard, a certain sign of satirical genius." He had the senses of a Greek. His eye was quick, and he was accounted an excellent master of his rapier. His ear for music was so acute, that he was not only enthusiastic in his love, but a skilful performer himself; and his voice, we are told, was delicately sweet and harmonious. He insists that music shall make a part of a generous education.

With these keen perceptions, he naturally received a love of nature and a rare susceptibility to impressions from external beauty. In the midst of London, he seems, like the creatures of the field and the forest, to have been tuned in concord with the order of the world; for, he believed, his poetic vein only flowed from the autumnal to the vernal equinox; and, in his essay on Education, he doubts whether, in the fine days of spring, any study can be accomplished by young men. "In those vernal seasons of the year when the air is calm and pleasant, it were an injury and sullenness against nature not to go out and see her riches and partake in her rejoicing with heaven and earth." His sensibility to impressions from beauty needs no proof from his history; it shines through every page. The form and the voice of Leonora Baroni seemed to have captivated him in Rome, and to her he addressed his Italian sonnets and Latin epigrams.
To these endowments it must be added that his address and his conversation were worthy of his fame. His house was resorted to by men of wit, and foreigners came to England, we are told, "to see the Lord Protector and Mr. Milton." In a letter to one of his foreign correspondents, Emeric Bigot, and in reply apparently to some compliment on his powers of conversation, he writes: "Many have been celebrated for their compositions, whose common conversation and intercourse have betrayed no marks of sublimity or genius. But, as far as possible, I aim to show myself equal in thought and speech to what I have written, if I have written anything well."

These endowments received the benefit of a careful and happy discipline. His father's care, seconded by his own endeavour, introduced him to a profound skill in all the treasures of Latin, Greek, Hebrew, and Italian tongues; and, to enlarge and enliven his elegant learning, he was sent into Italy, where he beheld the remains of ancient art, and the rival works of Raphael, Michael Angelo, and Correggio; where, also, he received social and academical honours from the learned and the great. In Paris, he became acquainted with Grotius; in Florence or Rome, with Galileo; and probably no traveller ever entered that country of history with better right to its hospitality, none upon whom its influences could have fallen more congenially.

Among the advantages of his foreign travel, Milton certainly did not count it the least that it contributed to forge and polish that great weapon of which he acquired such extraordinary mastery,—his power of language. His lore of foreign tongues added daily to his consummate skill in the use of his own. He was a benefactor of the English tongue by showing its capabilities. Very early in life he became conscious that he had more to say to his fellow-men than they had fit words to embody. At nineteen years, in a college exercise, he addresses his native language, saying to it that it would be his choice to leave trifles for a grave argument,

"Such as may make thee search thy coffers round,  
Before thou clothe my fancy in fit sound;  
Such where the deep transported mind may soar  
Above the wheeling poles, and at Heaven's door  
Look in, and see each blissful deity,  
How he before the thunderous throne doth lie."

F
Michael Angelo calls "him alone an artist, whose hands can execute what his mind has conceived." The world, no doubt, contains many of that class of men whom Wordsworth denominates "silent poets," whose minds teem with images which they want words to clothe. But Milton's mind seems to have no thought or emotion which refused to be recorded. His mastery of his native tongue was more than to use it as well as any other; he cast it into new forms. He uttered in it things unheard before. Not imitating but rivalling Shakespeare, he scattered, in tones of prolonged and delicate melody, his pastoral and romantic fancies; then, soaring into unattempted strains, he made it capable of an unknown majesty, and bent it to express every trait of beauty, every shade of thought; and searched the kennel and jakes as well as the palaces of sound for the harsh discords of his polemic wrath. We may even apply to his performance on the instrument of language, his own description of music;

"—Notes, with many a winding bout
Of linked sweetness long drawn out,
With wanton heed and giddy cunning,
The melting voice through mazes running,
Untwisting all the chains that tie
The hidden soul of harmony."

But, whilst Milton was conscious of possessing this intellectual voice, penetrating through ages and propelling its melodious undulations forward through the coming world, he knew that this mastery of language was a secondary power, and he respected the mysterious source whence it had its spring; namely, clear conceptions and a devoted heart. "For me," he said, in his Apology for Smectymnuus, "although I cannot say that I am utterly untrained in those rules which best rhetoricians have given, or unacquainted with those examples which the prime authors of eloquence have written in any learned tongue, yet true eloquence I find to be none but the serious and hearty love of truth; and that whose mind soever is fully possessed with a fervent desire to know good things, and with the dearest charity to infuse the knowledge of them into others, when such a man would speak, his words, by what I can express, like so many nimble and airy servitors, trip about him at command, and in well-ordered files, as he would wish, fall aptly into their own places."

But, as basis or fountain of his rare physical and intellec-
tual accomplishments, the man Milton was just and devout. He is rightly dear to mankind, because in him, among so many perverse and partial men of genius,—in him humanity rights itself; the old eternal goodness finds a home in his breast, and for once shows itself beautiful. His gifts are subordinated to his moral sentiments. And his virtues are so graceful that they seem rather talents than labours. Among so many contrivances as the world has seen to make holiness ugly, in Milton at least it was so pure a flame, that the foremost impression his character makes is that of elegance. The victories of the conscience in him are gained by the commanding charm which all the severe and restrictive virtues have for him. His virtues remind us of what Plutarch said of Timoleon’s victories, that they resembled Homer’s verses, they ran so easy and natural. His habits of living were austere. He was abstemious in diet, chaste, an early riser, and industrious. He tells us, in a Latin poem, that the lyrist may indulge in wine and in a freer life; but that he who would write an epic to the nations, must eat beans and drink water. Yet in his severity is no grimace or effort. He serves from love, not from fear. He is innocent and exact, because his taste was so pure and delicate. He acknowledges to his friend Diodati, at the age of twenty-one, that he is enamoured, if ever any was, of moral perfection: “For, whatever the Deity may have bestowed upon me in other respects, he has certainly inspired me, if any ever were inspired, with a passion for the good and fair. Nor did Ceres, according to the fable, ever seek her daughter Proserpine with such unceasing solicitude, as I have sought this τοῦ καλοῦ ἱδέαν, this perfect model of the beautiful in all forms and appearances of things.”

When he was charged with loose habits of living, he declares, that “a certain niceness of nature, an honest haughtiness and self-esteem either of what I was or what I might be, and a modesty, kept me still above those low descents of mind beneath which he must deject and plunge himself, that can agree” to such degradation. “His mind gave him,” he said, “that every free and gentle spirit, without that oath of chastity, ought to be born a knight; nor needed to expect the gilt spur, or the laying of a sword upon his shoulder, to stir him up, by his counsel and his arm, to secure and protect” attempted innocence.
He states these things, he says, "to show, that, though Christianity had been but slightly taught him, yet a certain reservedness of natural disposition and moral discipline, learned out of the noblest philosophy, was enough to keep him in disdain of far less incontinences than these," that had been charged on him. In like spirit, he replies to the suspicious calumny respecting his morning haunts. "Those morning haunts are where they should be, at home; not sleeping, or concocting the surfeits of an irregular feast, but up and stirring, in winter; often ere the sound of any bell awake men to labour or devotion; in summer, as oft with the bird that first rouses, or not much tardier, to read good authors, or cause them to be read, till the attention be weary, or memory have its perfect fraught; then with useful and generous labours preserving the body's health and hardiness, to render lightsome, clear, and not lumpish obedience to the mind, to the cause of religion and our country's liberty, when it shall require firm hearts in sound bodies to stand and cover their stations. These are the morning practices." This native honour never forsook him. It is the spirit of Comus, the loftiest song in the praise of chastity that is in any language. It always sparkles in his eyes. It breathed itself over his decent form. It refined his amusements, which consisted in gardening, in exercise with the sword, and in playing on the organ. It engaged his interest in chivalry, in courtesy, in whatsoever savoured of generosity and nobleness. This magnanimity shines in all his life. He accepts a high impulse at every risk, and deliberately undertakes the defence of the English people, when advised by his physicians that he does it at the cost of sight. There is a forbearance even in his polemics. He opens the war and strikes the first blow. When he had cut down his opponents, he left the details of death and plunder to meaner partisans. He said, "he had learned the prudence of the Roman soldier, not to stand breaking of legs, when the breath was quite out of the body."

To this antique heroism, Milton added the genius of the Christian sanctity. Few men could be cited who have so well understood what is peculiar in the Christian ethics, and the precise aid it has brought to men, in being an emphatic affirmation of the omnipotence of spiritual laws, and, by way of marking the contrast to vulgar opinions, laying its chief stress on humility. The indifferency of a wise mind to what
is called high and low, and the fact that true greatness is a
perfect humility, are revelations of Christianity which Milton
well understood. They give an inexhaustible truth to all
his compositions. His firm grasp of this truth is his weapon
against the prelates. He celebrates in the martyrs, "the
unresistible might of weakness." He told the bishops that
"instead of showing the reason of their lowly condition from
divine example and command, they seek to prove their high
pre-eminence from human consent and authority." He
advises that in country places, rather than to trudge many
miles to a church, public worship be maintained nearer home,
as in a house or barn. "For, notwithstanding the gaudy
superstition of some still devoted ignorantly to temples, we
may be well assured, that he who disdained not to be born
in a manger, disdains not to be preached in a barn." And
the following passage, in the Reason of Church Govern-
ment, indicates his own perception of the doctrine of
humility. "Albeit I must confess to be half in doubt
whether I should bring it forth or no, it being so contrary to
the eye of the world, that I shall endanger either not to be
regarded, or not to be understood. For who is there, almost,
that measures wisdom by simplicity, strength by suffering,
dignity by lowliness?" Obeying this sentiment, Milton
deserved the apostrophe of Wordsworth:

"Pure as the naked heavens, majestic, free,
So didst thou travel on life's common way
In cheerful godliness; and yet thy heart
The lowliest duties on itself did lay."

He laid on himself the lowliest duties. Johnson petulantly
taunts Milton with "great promise and small performance," in
returning from Italy because his country was in danger,
and then opening a private school. Milton, wiser, felt no
absurdity in this conduct. He returned into his revolu-
tionised country, and assumed an honest and useful task, by
which he might serve the state daily, whilst he launched from
time to time his formidable bolts against the enemies of
liberty. He felt the heats of that "love" which "esteems
no office mean." He compiled a logic for boys; he wrote a
grammar; and devoted much of his time to the preparing of a
Latin dictionary. But the religious sentiment warmed his
writings and conduct with the highest affection of faith.
The memorable covenant, which in his youth, in the second book of the *Reason of Church Government*, he makes with God and his reader, expressed the faith of his old age. For the first time since many ages, the invocations of the Eternal Spirit in the commencement of his books are not poetic forms, but are thoughts, and so are still read with delight. His views of choice of profession, and choice in marriage, equally expect a divine leading.

Thus chosen, by the felicity of his nature and of his breeding, for the clear perception of all that is graceful and all that is great in man, Milton was not less happy in his times. His birth fell upon the agitated years when the discontents of the English Puritans were fast drawing to a head against the tyranny of the Stuarts. No period has surpassed that in the general activity of mind. It is said that no opinion, no civil, religious, moral dogma can be produced, that was not broached in the fertile brain of that age. Questions that involve all social and personal rights were hasting to be decided by the sword, and were searched by eyes to which the love of freedom, civil and religious, lent new illumination. Milton, gentle, learned, delicately bred in all the elegance of art and learning, was set down in England in the stern, almost fanatic society of the Puritans. The part he took, the zeal of his fellowship, make us acquainted with the greatness of his spirit as in tranquil times we could not have known it. Susceptible as Burke to the attractions of historical prescription, of royalty, of chivalry, of an ancient church illustrated by old martyrs and installed in cathedrals,—he threw himself, the flower of elegancy, on the side of the reeking conventicle; the side of humanity, but unlearned and unadorned. His muse was brave and humane, as well as sweet. He felt the dear love of native land and native language. The humanity which warms his pages begins as it should, at home. He preferred his own English, so manlike he was, to the Latin, which contained all the treasures of his memory. “My mother bore me,” he said, “a speaker of what God made mine own, and not a translator.” He told the Parliament, that “the imprimatur of Lambeth House had been writ in Latin; for that our English, the language of men ever famous and foremost in the achievements of liberty, will not easily find servile letters enow to spell such a dictatory presumption.” At one time he medi-
tated writing a poem on the settlement of Britain, and a history of England was one of the three main tasks which he proposed to himself. He proceeded in it no further than to the Conquest. He studied with care the character of his countrymen, and once in the History, and once again in the Reason of Church Government, he has recorded his judgment of the English genius.

Thus drawn into the great controversies of the times, in them he is never lost in a party. His private opinions and private conscience always distinguish him. That which drew him to the party was his love of liberty, ideal liberty; this therefore he could not sacrifice to any party. Toland tells us, "As he looked upon true and absolute freedom to be the greatest happiness of this life, whether to societies or single persons, so he thought constraint of any sort to be the utmost misery; for which reason he used to tell those about him the entire satisfaction of his mind, that he had constantly employed his strength and faculties in the defence of liberty, and in direct opposition to slavery." Truly he was an apostle of freedom; of freedom in the house, in the state, in the church; freedom of speech, freedom of the press, yet in his own mind discriminated from savage licence, because that which he desired was the liberty of the wise man, containing itself in the limits of virtue. He pushed, as far as any in that democratic age, his ideas of civil liberty. He proposed to establish a republic, of which the federal power was weak and loosely defined, and the substantial power should remain with primary assemblies. He maintained that a nation may try, judge, and slay their king, if he be a tyrant. He pushed as far his views of ecclesiastical liberty. He taught the doctrine of unlimited toleration. One of his tracts is writ to prove that no power on earth can compel in matters of religion. He maintained the doctrine of literary liberty, denouncing the censorship of the press, and insisting that a book shall come into the world as freely as a man, so only it bear the name of author or printer, and be responsible for itself like a man. He maintained the doctrine of domestic liberty, or the liberty of divorce, on the ground that unfit disposition of mind was a better reason for the act of divorce than infirmity of body, which was good ground in law. The tracts he wrote on these topics are, for the most part, as fresh and pertinent to-day as they were then. The events which
produced them, the practical issues to which they tend, are mere occasions for this philanthropist to blow his trumpet for human rights. They are all varied applications of one principle, the liberty of the wise man. He sought absolute truth, not accommodating truth. His opinions on all subjects are formed for man as he ought to be, for a nation of Miltons. He would be divorced when he finds in his consort unfit disposition; knowing that he should not abuse that liberty, because with his whole heart he abhors licentiousness and loves chastity. He defends the slaying of the king, because a king is a king no longer than he governs by the laws; “it would be right to kill Philip of Spain making an inroad into England, and what right the king of Spain hath to govern us at all, the same hath the king Charles to govern tyrannically.” He would remove hirelings out of the church, and support preachers by voluntary contributions; requiring that such only should preach as have faith enough to accept so self-denying and precarious a mode of life, scorning to take thought for the aspects of prudence and expediency. The most devout man of his time, he frequented no church; probably from a disgust at the fierce spirit of the pulpits. And so, throughout all his actions and opinions, is he a consistent spiritualist, or believer in the omnipotence of spiritual laws. He wished that his writings should be communicated only to those who desired to see them. He thought nothing honest was low. He thought he could be famous only in proportion as he enjoyed the approbation of the good. He admonished his friend “not to admire military prowess, or things in which force is of most avail. For it would not be matter of rational wonder, if the wethers of our country should be born with horns that could batter down cities and towns. Learn to estimate great characters, not by the amount of animal strength, but by the habitual justice and temperance of their conduct.”

Was there not a fitness in the undertaking of such a person to write a poem on the subject of Adam, the first man? By his sympathy with all nature; by the proportion of his powers; by great knowledge, and by religion, he would re-ascent to the height from which our nature is supposed to have descended. From a just knowledge of what man should be, he described what he was. He beholds him as he walked in Eden:
"His fair large front and eye sublime declared
Absolute rule; and hyacinthine locks
Round from his parted forelock manly hung
Clustering, but not beneath his shoulders broad."

And the soul of this divine creature is excellent as his form. The tone of his thought and passion is as healthful, as even, and as vigorous, as befits the new and perfect model of a race of gods.

The perception we have attributed to Milton, of a purer ideal of humanity, modifies his poetic genius. The man is paramount to the poet. His fancy is never transcendent, extravagant; but, as Bacon’s imagination was said to be “the noblest that ever contented itself to minister to the understanding,” so Milton’s ministers to the character. Milton’s sublimest song, bursting into heaven with its peals of melodious thunder, is the voice of Milton still. Indeed, throughout his poems, one may see under a thin veil, the opinions, the feelings, even the incidents of the poet’s life, still reappearing. The sonnets are all occasional poems. L’Allegro and Il Penseroso are but a finer autobiography of his youthful fancies at Harefield; the Comus a transcript, in charming numbers, of that philosophy of chastity, which, in the Apology for Smectymnuus, and in the Reason of Church Government, he declares to be his defence and religion. The Samson Agonistes is too broad an expression of his private griefs to be mistaken, and is a version of the Doctrine and Discipline of Divorce. The most affecting passages in Paradise Lost are personal allusions; and, when we are fairly in Eden, Adam and Milton are often difficult to be separated. Again, in Paradise Regained, we have the most distinct marks of the progress of the poet’s mind, in the revision and enlargement of his religious opinions. This may be thought to abridge his praise as a poet. It is true of Homer and Shakespeare that they do not appear in their poems; that those prodigious geniuses did cast themselves so totally into their song, that their individuality vanishes, and the poet towers to the sky, whilst the man quite disappears. The fact is memorable. Shall we say that in our admiration and joy in these wonderful poems we have even a feeling of regret that the men knew not what they did; that they were too passive in their great service; were channels through which streams of thought flowed from a higher source, which they
did not appropriate, did not blend with their own being? Like prophets, they seem but imperfectly aware of the import of their own utterances. We hesitate to say such things, and say them only to the unpleasing dualism, when the man and the poet show like a double consciousness. Perhaps we speak to no fact, but to mere fables, of an idle mendicant Homer, and of a Shakespeare content with a mean and jocular way of life. Be it how it may, the genius and office of Milton were different, namely, to ascend by the aids of his learning and his religion,—by an equal perception, that is, of the past and the future,—to a higher insight and more lively delineation of the heroic life of man. This was his poem; whereof all his indignant pamphlets and all his soaring verses are only single cantos or detached stanzas. It was plainly needful that his poetry should be a version of his own life, in order to give weight and solemnity to his thoughts; by which they might penetrate and possess the imagination and the will of mankind. The creations of Shakespeare are cast into the world of thought to no further end than to delight. Their intrinsic beauty is their excuse for being. Milton, fired "with dearest charity to infuse the knowledge of good things into others," tasked his giant imagination and exhausted the stores of his intellect for an end beyond, namely, to teach. His own conviction it is which gives such authority to his strain. Its reality is its force. If out of the heart it came, to the heart it must go. What schools and epochs of common rhymers would it need to make a counterbalance to the severe oracles of his muse:

"In them is plainest taught and easiest learnt,  
What makes a nation happy, and keeps it so."

The lover of Milton reads one sense in his prose and in his metrical compositions; and sometimes the muse soars highest in the former, because the thought is more sincere. Of his prose in general, not the style alone but the argument also is poetic; according to Lord Bacon's definition of poetry, following that of Aristotle, "Poetry, not finding the actual world exactly conformed to its idea of good and fair, seeks to accommodate the shows of things to the desires of the mind, and to create an ideal world better than the world of experience." Such certainly is the explanation of Milton's tracts. Such is the apology to be entered for the plea for
freedom of divorce; an essay, which, from the first until now, has brought a degree of obloquy on his name. It was a sally of the extravagant spirit of the time, overjoyed, as in the French Revolution, with the sudden victories it had gained, and eager to carry on the standard of truth to new heights. It is to be regarded as a poem on one of the griefs of man's condition, namely, unfit marriage. And as many poems have been written upon unfit society, commending solitude, yet have not been proceeded against, though their end was hostile to the state; so should this receive that charity which an angelic soul, suffering more keenly than others from the unavoidable evils of human life, is entitled to.

We have offered no apology for expanding to such length our commentary on the character of John Milton; who, in old age, in solitude, in neglect, and blind, wrote the *Paradise Lost;* a man whom labour or danger never deterred from whatever efforts a love of the supreme interests of man prompted. For are we not the better; are not all men fortified by the remembrance of the bravery, the purity, the temperance, the toil, the independence and the angelic devotion of this man, who, in a revolutionary age, taking counsel only of himself, endeavoured, in his writings and in his life, to carry out the life of man to new heights of spiritual grace and dignity, without any abatement of its strength?
We sometimes meet in a stage-coach in New England an erect muscular man, with fresh complexion and a smooth hat, whose nervous speech instantly betrays the English traveller;—a man nowise cautious to conceal his name or that of his native country, or his very slight esteem for the persons and the country that surround him. When Mr. Bull rides in an American coach, he speaks quick and strong; he is very ready to confess his ignorance of everything about him, persons, manners, customs, politics, geography. He wonders that the Americans should build with wood, whilst all this stone is lying in the roadside; and is astonished to learn that a wooden house may last a hundred years; nor will he remember the fact as many minutes after it has been told him: he wonders that they do not make elder-wine and cherry-bounce, since here are cherries, and every mile is crammed with elder bushes. He has never seen a good horse in America, nor a good coach, nor a good inn. Here is very good earth and water and plenty of them,—that he is free to allow,—to all other gifts of nature or man his eyes are sealed by the inexorable demand for the precise conveniences to which he is accustomed in England. Add to this proud blindness the better quality of great downrightness in speaking the truth, and the love of fair play, on all occasions, and moreover the peculiarity which is alleged of the Englishman, that his virtues do not come out until he quarrels.

Transfer these traits to a very elegant and accomplished mind, and we shall have no bad picture of Walter Savage Landor, who may stand as a favourable impersonation of the genius of his countrymen at the present day. A sharp, dogmatic man, with a great deal of knowledge, a great deal of worth, and a great deal of pride; with a profound contempt for all that he does not understand; a master of all elegant learning, and capable of the utmost delicacy of sentiment, and yet prone to indulge a sort of ostentation of
Emerson's Essays

coarse imagery and language. His partialities and dislikes are by no means culpable, but are often whimsical and amusing; yet they are quite sincere, and, like those of Johnson and Coleridge, are easily separable from the man. What he says of Wordsworth is true of himself, that he delights to throw a clod of dirt on the table and cry "Gentlemen, there is a better man than all of you." Bolivar, Mina, and General Jackson will never be greater soldiers than Napoleon and Alexander, let Mr. Landor think as he will; nor will he persuade us to burn Plato and Xenophon, out of our admiration of Bishop Patrick, or Lucas on Happiness, or Lucas on Holiness, or even Barrow's Sermons. Yet a man may love a paradox without either losing his wit or his honesty. A less pardonable eccentricity is the cold and gratuitous obtrusion of licentious images, not so much the suggestion of merriment as of bitterness. Montaigne assigns as a reason for his licence of speech, that he is tired of seeing his Essays on the work-tables of ladies, and he is determined they shall for the future put them out of sight. In Mr. Landor's coarseness there is a certain air of defiance, and the rude word seems sometimes to arise from a disgust at niceness and over-refinement. Before a well-dressed company he plunges his fingers in a cess-pool, as if to expose the whiteness of his hands and the jewels of his ring. Afterward, he washes them in water, he washes them in wine; but you are never secure from his freaks. A sort of Earl Peterborough in literature, his eccentricity is too decided not to have diminished his greatness. He has capital enough to have furnished the brain of fifty stock authors, yet has written no good book.

But we have spoken all our discontent. Possibly his writings are open to harsher censure; but we love the man, from sympathy as well as for reasons to be assigned; and have no wish, if we were able, to put an argument in the mouth of his critics. Now for twenty years we have still found the Imaginary Conversations a sure resource in solitude, and it seems to us as original in its form as in its matter. Nay, when we remember his rich and ample page, wherein we are always sure to find free and sustained thought, a keen and precise understanding, an affluent and ready memory familiar with all chosen books, an industrious observation in every department of life, an experience to which nothing has occurred in vain, honour for every just and generous senti-
ment and a scourge like that of Furies for every oppressor, whether public or private, we feel how dignified is this perpetual Censor in his curule chair, and we wish to thank a benefactor of the reading world.

Mr. Landor is one of the foremost of that small class who make good in the nineteenth century the claims of pure literature. In these busy days of avarice and ambition, when there is no little disposition to profound thought or to any but the most superficial intellectual entertainments, a faithful scholar, receiving from past ages the treasures of wit and enlarging them by his own love, is a friend and consoler of mankind. When we pronounce the names of Homer and Æschylus,—Horace, Ovid, and Plutarch,—Erasmus, Scaliger, and Montaigne,—Ben Jonson and Isaak Walton,—Dryden and Pope,—we pass at once out of trivial associations and enter into a region of the purest pleasure accessible to human nature. We have quitted all beneath the moon and entered that crystal sphere in which everything in the world of matter reappears, but transfigured and immortal. Literature is the effort of man to indemnify himself for the wrongs of his condition. The existence of the poorest play-wright and the humblest scrivener is a good omen. A charm attaches to the most inferior names which have in any manner got themselves enrolled in the registers of the House of Fame, even as porters and grooms in the courts; to Creech and Fenton, Theobald and Dennis, Aubrey and Spence. From the moment of entering a library and opening a desired book, we cease to be citizens, creditors, debtors, housekeepers, and men of care and fear. What boundless leisure! what original jurisdiction! the old constellations have set, new and brighter have arisen; an elysian light tinges all objects.

"In the afternoon we came unto a land

In which it seemed always afternoon."

And this sweet asylum of an intellectual life must appear to have the sanction of nature, as long as so many men are born with so decided an aptitude for reading and writing. Let us thankfully allow every faculty and art which opens new scope to a life so confined as ours. There are vast spaces in a thought: a slave, to whom the religious sentiment is opened, has a freedom which makes his master's freedom a slavery. Let us not be so illiberal with our schemes
for the renovation of society and nature as to disesteem or deny the literary spirit. Certainly there are heights in nature which command this; there are many more which this commands. It is vain to call it a luxury, and as saints and reformers are apt to do, decry it as a species of day-dreaming. What else are sanctities, and reforms, and all other things? Whatever can make for itself an element, means, organs, servants, and the most profound and permanent existence in the hearts and heads of millions of men, must have a reason for its being. Its excellency is reason and vindication enough. If rhyme rejoices us there should be rhyme, as much as if fire cheers us we should bring wood and coals. Each kind of excellence takes place for its hour and excludes everything else. Do not brag of your actions, as if they were better than Homer’s verses or Raphael’s pictures. Raphael and Homer feel that action is pitiful beside their enchantments. They could act too, if the stake was worthy of them: but now all that is good in the universe urges them to their task. Whoever writes for the love of truth and beauty, and not with ulterior ends, belongs to this sacred class; and among these, few men of the present age have a better claim to be numbered than Mr. Landor. Wherever genius or taste has existed, wherever freedom and justice are threatened, which he values as the element in which genius may work, his interest is sure to be commanded. His love of beauty is passionate, and betrays itself in all petulant and contemptuous expressions.

But beyond his delight in genius and his love of individual
and civil liberty, Mr. Landor has a perception that is much
more rare, the appreciation of character. This is the more
remarkable considered with his intense nationality, to which
we have already alluded. He is buttoned in English broad-
cloth to the chin. He hates the Austrians, the Italians, the
French, the Scotch, and the Irish. He has the common
prejudices of an English land-holder; values his pedigree, his
acres, and the syllables of his name; loves all his advantages,
is not insensible to the beauty of his watch-seal, or the Turk’s
head on his umbrella; yet with all this miscellaneous pride
there is a noble nature within him which instructs him that
he is so rich that he can well spare all his trappings, and,
leaving to others the painting of circumstance, aspire to the
office of delineating character. He draws his own portrait in the costume of a village schoolmaster, and a sailor, and serenely enjoys the victory of nature over fortune. Not only the elaborated story of Normanby, but the whimsical selection of his heads proves this taste. He draws with evident pleasure the portrait of a man who never said anything right and never did anything wrong. But in the character of Pericles he has found full play for beauty and greatness of behaviour, where circumstances are in harmony with the man. These portraits, though mere sketches, must be valued as attempts in the very highest kind of narrative, which not only has very few examples to exhibit of any success, but very few competitors in the attempt. The word Character is in all mouths; it is a force which we all feel; yet who has analysed it? What is the nature of that subtle and majestic principle which attaches us to a few persons, not so much by personal as by the most spiritual ties? What is the quality of the persons who, without being public men, or literary men, or rich men, or active men, or (in the popular sense) religious men, have a certain salutary omnipresence in all our life's history, almost giving their own quality to the atmosphere and the landscape? A moral force, yet wholly unmindful of creed and catechism, intellectual, but scornful of books, it works directly and without means, and though it may be resisted at any time, yet resistance to it is a suicide. For the person who stands in this lofty relation to his fellow-men is always the impersonation to them of their conscience. It is a sufficient proof of the extreme delicacy of this element, evanescing before any but the most sympathetic vision, that it has so seldom been employed in the drama and in novels. Mr. Landor, almost alone among living English writers, has indicated his perception of it.

These merits make Mr. Landor's position in the republic of letters one of great mark and dignity. He exercises with a grandeur of spirit the office of writer, and carries it with an air of old and unquestionable nobility. We do not recollect an example of more complete independence in literary history. He has no clanship, no friendships that warp him. He was one of the first to pronounce Wordsworth the great poet of the age, yet he discriminates his faults with the greater freedom. He loves Pindar, Æschylus, Euripides, Aristophanes, Demosthenes, Virgil, yet with open eyes. His
position is by no means the highest in literature: he is not a poet or a philosopher. He is a man full of thoughts, but not, like Coleidge, a man of ideas. Only from a mind conversant with the First Philosophy can definitions be expected. Coleridge has contributed many valuable ones to modern literature. Mr. Landor's definitions are only enumerations of particulars; the generic law is not seized. But as it is not from the highest Alps or Andes but from less elevated summits that the most attractive landscape is commanded, so is Mr. Landor the most useful and agreeable of critics. He has commented on a wide variety of writers, with a closeness and extent of view which has enhanced the value of those authors to his readers. His dialogue on the Epicurean philosophy is a theory of the genius of Epicurus. The dialogue between Barrow and Newton is the best of all criticisms on the essays of Bacon. His picture of Demosthenes in three several dialogues is new and adequate. He has illustrated the genius of Homer, Æschylus, Pindar, Euripides, Thucydides. Then he has examined before he has expatiated, and the minuteness of his verbal criticism gives a confidence in his fidelity when he speaks the language of meditation or of passion. His acquaintance with the English tongue is unsurpassed. He "hates false words, and seeks with care, difficulty, and moroseness those that fit the thing." He knows the value of his own words. "They are not," he says, "written on slate." He never stoops to explanation, nor uses seven words where one will do. He is a master of condensation and suppression, and that in no vulgar way. He knows the wide difference between compression and an obscure elliptical style. The dense writer has yet ample room and choice of phrase, and even a gamesome mood often between his valid words. There is no inadequacy or disagreeable contraction in his sentence, any more than in a human face, where in a square space of a few inches is found room for every possible variety of expression.

Yet it is not as an artist that Mr. Landor commends himself to us. He is not epic or dramatic, he has not the high, overpowering method by which the master gives unity and integrity to a work of many parts. He is too wilful, and never abandons himself to his genius. His books are a strange mixture of politics, etymology, allegory, sentiment, and personal history; and what skill of transition he may
possess is superficial, not spiritual. His merit must rest, at last, not on the spirit of the dialogue or the symmetry of any of his historical portraits, but on the value of his sentences. Many of these will secure their own immortality in English literature; and this, rightly considered, is no mean merit. These are not plants and animals, but the genetical atoms of which both are composed. All our great debt to the Oriental world is of this kind, not utensils and statues of the precious metal, but bullion and gold dust. Of many of Mr. Landor's sentences we are fain to remember what was said of those of Socrates; that they are cubes, which will stand firm, place them how or where you will.

We will enrich our pages with a few paragraphs, which we hastily select from such of Mr. Landor's volumes as lie on our table.

"The great man is he who hath nothing to fear and nothing to hope from another. It is he, who, while he demonstrates the iniquity of the laws, and is able to correct them, obeys them peaceably. It is he who looks on the ambition, both as weak and fraudulent. It is he who hath no disposition or occasion for any kind of deceit, no reason for being or for appearing different from what he is. It is he who can call together the most select company when it pleases him. . . . Him I would call the powerful man who controls the storms of his mind, and turns to good account the worst accidents of his fortune. The great man, I was going on to show thee, is somewhat more. He must be able to do this, and he must have that intellect which puts into motion the intellect of others."

"All titulars else must be produced by others; a knight by a knight, a peer by a King, while a gentleman is self-existent."

"Critics talk most about the visible in sublimity . . . the Jupiter, the Neptune. Magnitude and power are sublime, but in the second degree, managed as they may be. Where the heart is not shaken, the gods thunder and stride in vain. True sublimity is the perfection of the pathetic, which has other sources than pity; generosity, for instance, and self-
devotion. When the generous and self-devoted man suffers, there comes Pity; the basis of the sublime is then above the water, and the poet, with or without the gods, can elevate it above the skies. Terror is but the relic of a childish feeling; pity is not given to children. So said he; I know not whether rightly, for the wisest differ on poetry, the knowledge of which, like other most important truths, seems to be reserved for a purer state of sensation and existence."

"O Cyrus, I have observed that the authors of good make men very bad as often as they talk much about them."

"The habit of haranguing is in itself pernicious; I have known even the conscientious and pious, the humane and liberal dried up by it into egoism and vanity, and have watched the mind, growing black and rancid in its own smoke."

GLORY

"Glory is a light which shines from us on others, not from others on us."

"If thou lovest Glory, thou must trust her truth. She followeth him who doth not turn and gaze after her."

RICHARD I

"Let me now tell my story . . . to confession another time. I sailed along the realms of my family; on the right was England, on the left was France; little else could I discover than sterile eminences and extensive shoals. They fled behind me; so pass away generations; so shift, and sink, and die away affections. In the wide ocean I was little of a monarch; old men guided me, boys instructed me; these taught me the names of my towns and harbours, those showed me the extent of my dominions; one cloud, that dissolved in one hour, half covered them.

"I debark in Sicily. I place my hand upon the throne of Tancred, and fix it. I sail again, and within a day or two I behold, as the sun is setting, the solitary majesty of Crete, mother of a religion, it is said, that lived two thousand years. Onward, and many specks bubble up along the blue Ægean; islands, every one of which, if the songs and stories of the pilots are true, is the monument of a greater man than I am."
I leave them afar off ... and for whom? O, abbot, to join creatures of less import than the sea-mews on their cliffs; men praying to be heard, and fearing to be understood, ambitious of another's power in the midst of penitence, avaricious of another's wealth under vows of poverty, and jealous of another's glory in the service of their God. Is this Christianity? and is Saladin to be damned if he despises it?"

DEMOSTHENES

"While I remember what I have been, I never can be less. External power can affect those only who have none intrinsically. I have seen the day, Eubulides, when the most august of cities had but one voice within her walls; and when the stranger, on entering them, stopped at the silence of the gateway, and said, 'Demosthenes is speaking in the assembly of the people.'"

"There are few who form their opinions of greatness from the individual. Ovid says, 'the girl is the least part of herself.' Of himself, certainly, the man is."

"No men are so facetious as those whose minds are somewhat perverted. Truth enjoys good air and clear light, but no playground."

"I found that the principal means (of gratifying the universal desire of happiness) lay in the avoidance of those very things, which had hitherto been taken up as the instruments of enjoyment and content; such as military commands, political offices, clients, adventures in commerce, and extensive landed property."

"Abstinence from low pleasures is the only means of meriting or of obtaining the higher."

"Praise keeps good men good."

"The highest price we can pay for a thing is to ask for it."

"There is a gloom in deep love as in deep water; there is a silence in it which suspends the foot; and the folded arms, and the dejected head are the images it reflects. No voice shakes its surface; the Muses themselves approach it with a tardy and a timid step, and with a low and tremulous and melancholy song."

"Anaxagoras is the true, firm, constant friend of Pericles; the golden lamp that shines perpetually on the image I adore."
[The Letter of Pericles to Aspasia in reply to her request to be permitted to visit Xeniades.]

"Do what your heart tells you; yes, Aspasia, do all it tells you. Remember how august it is. It contains the temple, not only of Love, but of Conscience; and a whisper is heard from the extremity of one to the extremity of the other.

"Bend in pensiveness, even in sorrow, on the flowery bank of youth, whereunder runs the stream that passes irreversibly! let the garland drop into it, let the hand be refreshed by it—but—may the beautiful feet of Aspasia stand firm."
MICHAEL ANGELO

There are few lives of eminent men that are harmonious; few that furnish, in all the facts, an image corresponding with their fame. But all things recorded of Michael Angelo Buonarotti agree together. He lived one life; he pursued one career. He accomplished extraordinary works; he uttered extraordinary words; and in this greatness was so little eccentricity, so true was he to the laws of the human mind, that his character and his works, like Sir Isaac Newton's, seem rather a part of nature than arbitrary productions of the human will. Especially we venerate his moral fame. Whilst his name belongs to the highest class of genius, his life contains in it no injurious influence. Every line in his biography might be read to the human race with wholesome effect. The means, the materials of his activity, were coarse enough to be appreciated, being addressed for the most part to the eye; the results, sublime and all innocent. A purity severe and even terrible goes out from the lofty productions of his pencil and his chisel, and again from the more perfect sculpture of his own life, which heals and exalts. "He nothing common did, or mean," and dying at the end of near ninety years, had not yet become old, but was engaged in executing his grand conceptions in the ineffaceable architecture of St. Peter's.

Above all men whose history we know, Michael Angelo presents us with the perfect image of the artist. He is an eminent master in the four fine arts, Painting, Sculpture, Architecture, and Poetry. In three of them by visible means, and in poetry by words, he strove to express the Idea of Beauty. This idea possessed him and determined all his activity. Beauty in the largest sense, beauty inward and outward, comprehending grandeur as a part, and reaching to goodness as its soul,—this to receive and this to impart, was his genius.

It is not without pleasure that we see, amid the falsehood
and griefs of the human race, a soul at intervals born to behold and create only beauty. So shall not the indescribable charm of the natural world, the great spectacle of morn and evening which shut and open the most disastrous day, want observers. The ancient Greeks called the world κόσμος, Beauty; a name which, in our artificial state of society, sounds fanciful and impertinent. Yet, in proportion as man rises above the servitude to wealth and a pursuit of mean pleasures, he perceives that what is most real is most beautiful, and that, by the contemplation of such objects, he is taught and exalted. This truth, that perfect beauty and perfect goodness are one, was made known to Michael Angelo; and we shall endeavour by sketches from his life to show the direction and limitations of his search after this element.

In considering a life dedicated to the study of Beauty, it is natural to inquire, what is Beauty? Can this charming element be so abstracted by the human mind, as to become a distinct and permanent object? Beauty cannot be defined. Like Truth, it is an ultimate aim of the human being. It does not lie within the limits of the understanding. "The nature of the beautiful,"—we gladly borrow the language of Moritz, a German critic,—"consists herein, that because the understanding in the presence of the beautiful cannot ask, 'Why is it beautiful?' for that reason is it so. There is no standard whereby the understanding can determine whether objects are beautiful or otherwise. What other standard of the beautiful exists, than the entire circuit of all harmonious proportions of the great system of nature? All particular beauties scattered up and down in nature are only so far beautiful, as they suggest more or less in themselves this entire circuit of harmonious proportions." This great Whole, the understanding cannot embrace. Beauty may be felt. It may be produced. But it cannot be defined.

The Italian artists sanction this view of beauty by describing it as il più nell' uno, "the many in one," or multitude in unity, intimating that what is truly beautiful seems related to all nature. A beautiful person has a kind of universality, and appears to have truer conformity to all pleasing objects in external nature than another. Every great work of art seems to take up into itself the excellencies of all works, and to present, as it were, a miniature of nature.

In relation to this element of Beauty, the minds of men
divide themselves into two classes. In the first place, all men have an organisation corresponding more or less to the entire system of nature, and therefore a power of deriving pleasure from Beauty. This is Taste. In the second place, certain minds, more closely harmonised with nature, possess the power of abstracting Beauty from things, and reproducing it in new forms, on any object to which accident may determine their activity; as stone, canvas, song, history. This is Art.

Since Beauty is thus an abstraction of the harmony and proportion that reigns in all nature, it is therefore studied in nature, and not in what does not exist. Hence the celebrated French maxim of Rhetoric, Rien de beau que le vrai; "Nothing is beautiful but what is true." It has a much wider application than to Rhetoric; as wide, namely, as the terms of the proposition admit. In art, Michael Angelo is himself but a document or verification of this maxim. He laboured to express the beautiful, in the entire conviction that it was only to be attained unto by knowledge of the true. The common eye is satisfied with the surface on which it rests. The wise eye knows that it is surface, and, if beautiful, only the result of interior harmonies, which, to him who knows them, compose the image of higher beauty. Moreover, he knew well that only by an understanding of the internal mechanism can the outside be faithfully delineated. The walls of houses are transparent to the architect. The symptoms disclose the constitution to the physician; and to the artist it belongs by a better knowledge of anatomy, and, within anatomy, of life and thought, to acquire the power of true drawing. "The human form," says Goethe, "cannot be comprehended through seeing its surface. It must be stripped of the muscles, its parts separated, its joints observed, its divisions marked, its action and counter action learned; the hidden, the reposing, the foundation of the apparent, must be searched, if one would really see and imitate what moves as a beautiful inseparable whole in living waves before the eye." Michael Angelo dedicated himself, from his childhood to his death, to a toilsome observation of nature. The first anecdote recorded of him shows him to be already on the right road. Granacci, a painter's apprentice, having lent him, when a boy, a print of St. Antony beaten by devils, together with
some colours and pencils, he went to the fish-market to observe the form and colour of fins and of the eyes of fish. Cardinal Farnese one day found him, when an old man, walking alone in the Coliseum, and expressed his surprise at finding him solitary amidst the ruins; to which he replied, “I go yet to school that I may continue to learn.” And one of the last drawings in his portfolio is a sublime hint of his own feeling; for it is a sketch of an old man with a long beard, in a go-cart, with an hour-glass before him; and the motto, Ancora imparo, “I still learn.”

In this spirit he devoted himself to the study of anatomy for twelve years; we ought to say rather, as long as he lived. The depth of his knowledge in anatomy has no parallel among the artists of modern times. Most of his designs, his contemporaries inform us, were made with a pen, and in the style of an engraving on copper or wood; a manner more expressive but not admitting of correction. When Michael Angelo would begin a statue, he made first on paper the skeleton; afterwards, upon another paper, the same figure clothed with muscles. The studies of the statue of Christ in the Church of Minerva at Rome, made in this manner, were long preserved.

Those who have never given attention to the arts of design, are surprised that the artist should find so much to study in a fabric of such limited parts and dimensions as the human body. But reflection discloses evermore a closer analogy between the finite form and the infinite inhabitant. Man is the highest, and indeed the only proper object of plastic art. There needs no better proof of our instinctive feeling of the immense expression of which the human figure is capable, than the uniform tendency which the religion of every country has betrayed towards Anthropomorphism, or attributing to the Deity the human form. And behold the effect of this familiar object every day! No acquaintance with the secrets of its mechanism, no degrading views of human nature, not the most swinish compost of mud and blood that was ever misnamed philosophy, can avail to hinder us from doing involuntary reverence to any exhibition of majesty or surpassing beauty in human clay.

Yet our knowledge of its highest expression we owe to the Fine Arts. Not easily in this age will any man acquire by himself such perceptions of the dignity or grace of the
human frame, as the student of art owes to the remains of Phidias, to the Apollo, the Jove, the paintings and statues of Michael Angelo, and the works of Canova. There are now in Italy, both on canvas and in marble, forms and faces which the imagination is enriched by contemplating. Goethe says that he is but half himself who has never seen the Juno in the Rondanini palace at Rome. Seeing these works true to human nature and yet superhuman, "we feel that we are greater than we know." Seeing these works, we appreciate the taste which led Michael Angelo, against the taste and against the admonition of his patrons, to cover the walls of churches with unclothed figures, "improper," says his biographer, "for the place, but proper for the exhibition of all the pomp of his profound knowledge."

The love of beauty which never passes beyond outline and colour, was too slight an object to occupy the powers of his genius. There is a closer relation than is commonly thought between the fine arts and the useful arts; and it is an essential fact in the history of Michael Angelo, that his love of beauty is made solid and perfect by his deep understanding of the mechanic arts. Architecture is the bond that unites the elegant and the economical arts, and his skill in this is a pledge of his capacity in both kinds. His Titanic handwriting in marble and travertine is to be found in every part of Rome and Florence; and even at Venice, on defective evidence, he is said to have given the plan of the bridge of the Rialto. Nor was his a skill in ornament, or confined to the outline and designs of towers and façades, but a thorough acquaintance with all the secrets of the art, with all the details of economy and strength.

When the Florentines united themselves with Venice, England, and France, to oppose the power of the Emperor Charles V., Michael Angelo was appointed Military Architect and Engineer, to superintend the erection of the necessary works. He visited Bologna to inspect its celebrated fortifications, and, on his return, constructed a fortification on the heights of San Miniato, which commands the city and environs of Florence. On the 24th of October, 1529, the Prince of Orange, general of Charles V., encamped on the hills surrounding the city, and his first operation was to throw up a rampart to storm the bastion of San Miniato. His design was frustrated by the providence of Michael Angelo. Michael
made such good resistance, that the Prince directed the artillery to demolish the tower. The artist hung mattresses of wool on the side exposed to the attack, and by means of a bold projecting cornice, from which they were suspended, a considerable space was left between them and the wall. This simple expedient was sufficient, and the Prince was obliged to turn his siege into a blockade.

After an active and successful service to the city for six months, Michael Angelo was informed of a treachery that was ripening within the walls. He communicated it to the government with his advice upon it; but was mortified by receiving from the government reproaches at his credulity and fear. He replied, "that it was useless for him to take care of the walls, if they were determined not to take care of themselves," and he withdrew privately from the city to Ferrara, and thence to Venice. The news of his departure occasioned a general concern in Florence, and he was instantly followed with apologies and importunities to return. He did so, and resumed his office. On the 21st of March, 1530, the Prince of Orange assaulted the city by storm. Michael Angelo is represented as having ordered his defence so vigorously, that the Prince was compelled to retire. By the treachery however of the general of the Republic, Malatesta Baglioni, all his skill was rendered unavailing, and the city capitulated on the 9th of August. The excellence of the works constructed by our artist has been approved by Vauban, who visited them and took a plan of them.

In Rome, Michael Angelo was consulted by Pope Paul III. in building the fortifications of San Borgo. He built the stairs of Ara Celi leading to the Church once the temple of Jupiter Capitolinus; he arranged the piazza of the Capitol, and built its porticoes. He was charged with rebuilding the Pons Palatinus over the Tiber. He prepared, accordingly, a large quantity of blocks of travertine, and was proceeding with the work, when, through the intervention of his rivals, this work was taken from him and intrusted to Nanni di Bacio Bigio, who plays but a pitiful part in Michael's history. Nanni sold the travertine, and filled up the piers with gravel at a small expense. Michael Angelo made known his opinion, that the bridge could not resist the force of the current; and, one day riding over it on horseback, with his friend Vasari, he cried, "George, this bridge trembles under us; let us
ride faster lest it fall whilst we are upon it." It fell, five years after it was built, in 1557, and is still called the "Broken Bridge."

Versatility of talent in men of undoubted ability always awakens the liveliest interest; and we observe with delight, that, besides the sublimity and even extravagance of Michael Angelo, he possessed an unexpected dexterity in minute mechanical contrivances. When the Sistine Chapel was prepared for him that he might paint the ceiling, he found the platform on which he was to work, suspended by ropes which passed through the ceiling. Michael demanded of San Gallo, the Pope's architect, how these holes were to be repaired in the picture? San Gallo replied; "That was for him to consider, for the platform could be constructed in no other way." Michael removed the whole, and constructed a movable platform to rest and roll upon the floor, which is believed to be the same simple contrivance which is used in Rome, at this day, to repair the walls of churches. He gave this model to a carpenter, who made it so profitable as to furnish a dowry for his two daughters. He was so nice in tools, that he made with his own hand the wimbles, the files, the rasps, the chisels, and all other irons and instruments which he needed in sculpture; and, in painting, he not only mixed but ground his colours himself, trusting no one.

And not only was this discoverer of Beauty, and its teacher among men, rooted and grounded in those severe laws of practical skill, which genius can never teach, and which must be learned by practice alone, but he was one of the most industrious men that ever lived. His diligence was so great that it is wonderful how he endured its fatigues. The midnight battles, the forced marches, the winter campaigns of Julius Cæsar or Charles XII. do not indicate greater strength of body or of mind. He finished the gigantic painting of the ceiling of the Sistine Chapel in twenty months, a fact which enlarges, it has been said, the known powers of man. Indeed he toiled so assiduously at this painful work, that, for a long time after, he was unable to see any picture but by holding it over his head. A little bread and wine was all his nourishment; and he told Vasari that he often slept in his clothes, both because he was too weary to undress, and because he would rise in the night and go immediately to work. "I have found," says his friend, "some of his designs in Florence,
where, whilst may be seen the greatness of his genius, it may also be known that when he wished to take Minerva from the head of Jove, there needed the hammer of Vulcan.” He used to make to a single figure nine, ten, or twelve heads before he could satisfy himself, seeking that there should be in the composition a certain universal grace such as nature makes, saying, that “he needed to have his compasses in his eye, and not in his hand, because the hands work whilst the eye judges.” He was accustomed to say, “Those figures alone are good, from which the labour is scraped off, when the scaffolding is taken away.”

At near eighty years, he began in marble a group of four figures for a dead Christ; because, he said, to exercise himself with the mallet was good for his health.

And what did he accomplish? It does not fall within our design to give an account of his works, yet for the sake of the completeness of our sketch we will name the principal ones. Sculpture, he called his art, and to it he regretted afterwards he had not singly given himself. The style of his paintings is monumental; and even his poetry partakes of that character. In sculpture, his greatest work is the statue of Moses in the Church of Pietro in Vincolo, in Rome. It is a sitting statue of colossal size, and is designed to embody the Hebrew Law. The lawgiver is supposed to gaze upon the worshippers of the golden calf. The majestic wrath of the figure daunts the beholder. In the Piazza del Gran Duca at Florence, stands, in the open air, his David, about to hurl the stone at Goliath. In the Church called the Minerva, at Rome, is his Christ; an object of so much devotion to the people, that the right foot has been shod with a brazen sandal to prevent it from being kissed away. In St. Peter’s, is his Pietà, or dead Christ in the arms of his mother. In the Mausoleum of the Medici at Florence, are the tombs of Lorenzo and Cosmo, with the grand statues of Night and Day, and Aurora and Twilight. Several statues of less fame, and bas-reliefs, are in Rome and Florence and Paris.

His Paintings are in the Sistine Chapel, of which he first covered the ceiling with the story of the creation, in successive compartments, with the great series of the Prophets and Sibyls in alternate tablets, and a series of greater and smaller fancy-pieces in the lunettes. This is his capital work painted
in fresco. Every one of these pieces, every figure, every hand and foot and finger, is a study of anatomy and design. Slighting the secondary arts of colouring, and all the aids of graceful finish, he aimed exclusively, as a stern designer, to express the vigour and magnificence of his conceptions. Upon the wall, over the altar, is painted the Last Judgment.

Of his designs, the most celebrated is the cartoon representing soldiers coming out in the bath and arming themselves; an incident of the war of Pisa. The wonderful merit of this drawing, which contrasts the extremes of relaxation and vigour, is conspicuous even in the coarsest prints.

Of his genius for Architecture, it is sufficient to say that he built St. Peter's, an ornament of the earth. He said he would hang the Pantheon in the air; and he redeemed his pledge by suspending that vast cupola, without offence to grace or to stability, over the astonished beholder. He did not live to complete the work; but is there not something affecting in the spectacle of an old man, on the verge of ninety years, carrying steadily onward with the heat and determination of manhood, his poetic conceptions into progressive execution, surmounting by the dignity of his purposes all obstacles and all enmities, and only hindered by the limits of life from fulfilling his designs? Very slowly came he, after months and years, to the dome. At last he began to model it very small in wax. When it was finished, he had it copied larger in wood, and by this model it was built. Long after it was completed, and often since, to this day, rumours are occasionally spread that it is giving way, and it is said to have been injured by unskilful attempts to repair it. Benedict XIV., during one of these panics, sent for the architect Marchese Polini, to come to Rome and examine it. Polini put an end to all the various projects of repairs, by the satisfying sentence; "The cupola does not start, and if it should start, nothing can be done but to pull it down."

The impulse of his grand style was instantaneous upon his contemporaries. Every stroke of his pencil moved the pencil in Raphael's hand. Raphael said, "I bless God I live in the times of Michael Angelo." Sir Joshua Reynolds, two centuries later, declared to the British Institution, "I feel a self-congratulation in knowing myself capable of such sensations as he intended to excite."

A man of such habits and such deeds, made good his pre-
tensions to a perception and to delineation of external beauty. But inimitable as his works are, his whole life confessed that his hand was all inadequate to express his thought. "He alone," he said, "is an artist whose hands can perfectly execute what his mind has conceived;" and such was his own mastery, that men said, "the marble was flexible in his hands." Yet, contemplating ever with love the idea of absolute beauty, he was still dissatisfied with his own work. The things proposed to him in his imagination were such, that, for not being able with his hands to express so grand and terrible conceptions, he often abandoned his work. For this reason he often only blocked his statue. A little before he died, he burned a great number of designs, sketches, and cartoons made by him, being impatient of their defects. Grace in living forms, except in very rare instances, did not satisfy him. He never made but one portrait (a cartoon of Messer Tommaso di Cavalieri), because he abhorred to draw a likeness unless it were of infinite beauty.

Such was his devotion to art. But let no man suppose that the images which his spirit worshipped were mere transcripts of external grace, or that this profound soul was taken or holden in the chains of superficial beauty. To him, of all men, it was transparent. Through it he beheld the eternal spiritual beauty which ever clothes itself with grand and graceful outlines, as its appropriate form. He called eternal grace "the frail and weary weed, in which God dresses the soul which he has called into Time." "As from the fire, heat cannot be divided, no more can beauty from the eternal." He was conscious in his efforts of higher aims than to address the eye. He sought, through the eye, to reach the soul. Therefore, as, in the first place, he sought to approach the Beautiful by the study of the True, so he failed not to make the next step of progress, and to seek Beauty in its highest form, that of Goodness. The sublimity of his art is in his life. He did not only build a divine temple, and paint and carve saints and prophets. He lived out the same inspiration. There is no spot upon his fame. The fire and sanctity of his pencil breathe in his words. When he was informed that Paul IV. desired he should paint again the side of the chapel where the Last Judgment was painted, because of the indecorous nudity of the figures, he replied, "Tell the Pope that this is easily done. Let him reform the world and he will
find the pictures will reform themselves." He saw clearly that if the corrupt and vulgar eyes, that could see nothing but indecorum in his terrific prophets and angels, could be purified as his own were pure, they would only find occasion for devotion in the same figures. As he refused to undo his work, Daniel di Volterra was employed to clothe the figures; hence ludicrously called Il Braghettone. When the Pope suggested to him that the chapel would be enriched if the figures were ornamented with gold, Michael Angelo replied, "In those days, gold was not worn; and the characters I have painted were neither rich nor desirous of wealth, but holy men, with whom gold was an object of contempt."

It was not until he was in the seventy-third year of his age, he undertook the building of St. Peter's. On the death of San Gallo, the architect of the church, Paul III. first entertained, then commanded the aged artist, to assume the charge of this great work, which though commenced forty years before, was only commenced by Bramante, and ill continued by San Gallo. Michael Angelo, who believed in his own ability as a sculptor, but distrusted his capacity as an architect, at first refused and then reluctantly complied. His heroic stipulation with the Pope was worthy of the man and the work. He required that he should be permitted to accept this work without any fee or reward, because he undertook it as a religious act; and, furthermore, that he should be absolute master of the whole design, free to depart from the plans of San Gallo and to alter what had been already done.

This disinterestedness and spirit,—no fee and no interference,—reminds one of the reward named by the ancient Persian. When importuned to claim some compensation of the empire for the important services he had rendered it, he demanded, "that he and his should neither command nor obey, but should be free." However, as it was undertaken, so was it performed. When the Pope, delighted with one of his chapels, sent him one hundred crowns of gold, as one month's wages, Michael sent them back. The Pope was angry, but the artist was immovable. Amidst endless annoyances from the envy and interest of the office-holders and agents in the work whom he had displaced, he steadily ripened and executed his vast ideas. The combined desire to fulfil, in everlasting stone, the conceptions of his mind, and to complete his worthy offering to Almighty God, sustained
him through numberless vexations with unbroken spirit. In answer to the importunate solicitations of the Duke of Tuscany that he would come to Florence, he replies that "to leave St. Peter's in the state in which it now was, would be to ruin the structure, and thereby be guilty of a great sin;" that he hoped he should shortly see the execution of his plans brought to such a point that they could no longer be interfered with, and this was the capital object of his wishes, "if," he adds, "I do not commit a great crime, by disappointing the cormorants who are daily hoping to get rid of me."

A natural fruit of the nobility of his spirit is his admiration of Dante, to whom two of his sonnets are addressed. He shared Dante's "deep contempt of the vulgar, not of the simple inhabitants of lowly streets or humble cottages, but of that sordid and abject crowd of all classes and all places who obscure, as much as in them lies, every beam of beauty in the universe." In like manner, he possessed an intense love of solitude. He lived alone, and never or very rarely took his meals with any person. As will be supposed, he had a passion for the country, and in old age speaks with extreme pleasure of his residence with the hermits in the mountains of Spoleto; so much so that he says he is "only half in Rome, since, truly, peace is only to be found in the woods." Traits of an almost savage independence mark all his history. Although he was rich, he lived like a poor man, and never would receive a present from any person; because it seemed to him that if a man gave him anything, he was always obligated to that individual. His friend Vasari mentions one occasion on which his scruples were overcome. It seems that Michael was accustomed to work at night with a paste-board cap or helmet on his head, into which he stuck a candle, that his work might be lighted and his hands at liberty. Vasari observed that he did not use wax candles, but a better sort made of the tallow of goats. He therefore sent him four bundles of them, containing forty pounds. His servant brought them after night-fall, and presented them to him. Michael Angelo refused to receive them. "Look you, Messer Michael Angelo," replied the man, "these candles have well nigh broken my arm, and I will not carry them back; but just here, before your door, is a spot of soft mud, and they will stand upright in it very well, and there I will light them all."—"Put them down, then," returned Michael,
Michael Angelo

"since you shall not make a bonfire at my gate." Meantime he was liberal to profusion to his old domestic Urbino, to whom he gave at one time two thousand crowns, and made him rich in his service.

Michael Angelo was of that class of men who are too superior to the multitude around them to command a full and perfect sympathy. They stand in the attitude rather of appeal from their contemporaries to their race. It has been the defect of some great men, that they did not duly appreciate or did not confess the talents and virtues of others, and so lacked one of the richest sources of happiness and one of the best elements of humanity. This apathy perhaps happens as often from preoccupied attention as from jealousy. It has been supposed that artists more than others are liable to this defect. But Michael Angelo’s praise on many works is to this day the stamp of fame. Michael Angelo said of Masaccio’s pictures that when they were first painted they must have been alive. He said of his predecessor, the architect Bramante, that he laid the first stone of St. Peter’s, clear, insulated, luminous, with fit design for a vast structure. He often expressed his admiration of Cellini’s bust of Altoviti. He loved to express admiration of Titian, of Donatello, of Ghiberti, of Brunelleschi. And it is said that when he left Florence to go to Rome, to build St. Peter’s, he turned his horse’s head on the last hill from which the noble dome of the Cathedral (built by Brunelleschi) is visible, and said, "Like you, I will not build; better than you I cannot." Indeed, as we have said, the reputation of many works of art now in Italy derives a sanction from the tradition of his praise. It is more commendation to say, "This was Michael Angelo’s favourite," than to say, "This was carried to Paris by Napoleon." Michael, however, had the philosophy to say, "Only an inventor can use the inventions of others."

There is yet one more trait in Michael Angelo’s history, which humanises his character without lessening its loftiness; this is his platonic love. He was deeply enamoured of the most accomplished lady of the time, Vittoria Colonna, the widow of the Marquis di Pescara, who, after the death of her husband, devoted herself to letters, and to the writing of religious poetry. She was also an admirer of his genius, and came to Rome repeatedly to see him. To her his sonnets are addressed; and they all breathe a chaste and divine
regard, unparalleled in any amatory poetry except that of Dante and Petrarch. They are founded on the thought that beauty is the virtue of the body, as virtue is the beauty of the soul; that a beautiful person is sent into the world as an image of the divine beauty, not to provoke but to purify the sensual into an intellectual and divine love. He enthrones his mistress as a benignant angel, who is to refine and perfect his own character. Condivi, his friend, has left this testimony; "I have often heard Michael Angelo reason and discourse upon love, but never heard him speak otherwise than upon platonic love. As for me, I am ignorant what Plato has said upon this subject; but this I know very well, that, in a long intimacy, I never heard from his mouth a single word that was not perfectly decorous and having for its object to extinguish in youth every improper desire, and that his own nature is a stranger to depravity." The poems themselves cannot be read without awakening sentiments of virtue. An eloquent vindication of their philosophy may be found in a paper by Signor Radici in the London Retrospective Review, and, by the Italian scholar, in the Discourse of Benedetto Varchi upon one sonnet of Michael Angelo, contained in the volume of his poems published by Biagioli, from which, in substance, the views of Radici are taken.

Towards his end, there seems to have grown in him an invincible appetite of dying, for he knew that his spirit could only enjoy contentment after death. So vehement was this desire that, he says, "my soul can no longer be appeased by the wonted seductions of painting and sculpture." A fine melancholy, not unrelieved by his habitual heroism, pervades his thoughts on this subject. At the age of eighty years, he wrote to Vasari, sending him various spiritual sonnets he had written, and tells him he "is at the end of his life, that he is careful where he bends his thoughts, that he sees it is already twenty-four o'clock, and no fancy arose in his mind but death was sculptured on it." In conversing upon this subject with one of his friends, that person remarked, that Michael might well grieve that one who was incessant in his creative labours should have no restoration. "No," replied Michael, "it is nothing; for, if life pleases us, death, being a work of the same master, ought not to displease us." But a nobler sentiment, uttered by him, is contained in his reply to a letter of Vasari, who had informed him of the rejoicings
made at the house of his nephew Lionardo, at Florence, over the birth of another Buonarotti. Michael admonishes him that "a man ought not to smile, when all those around him weep; and that we ought not to show that joy when a child is born, which should be reserved for the death of one who has lived well."

Amidst all these witnesses to his independence, his generosity, his purity, and his devotion, are we not authorised to say that this man was penetrated with the love of the highest beauty, that is, goodness; that his was a soul so enamoured of grace, that it could not stoop to meanness or depravity; that art was to him no means of livelihood or road to fame, but the end of living, as it was the organ through which he sought to suggest lessons of an unutterable wisdom; that here was a man who lived to demonstrate that to the human faculties, on every hand, worlds of grandeur and grace are opened, which no profane eye and no indolent eye can behold, but which to see and to enjoy, demands the severest discipline of all the physical, intellectual, and moral faculties of the individual?

The city of Florence, on the river Arno, still treasures the fame of this man. There, his picture hangs in every window; there, the tradition of his opinions meets the traveller in every spot. "Do you see that statue of St. George? Michael Angelo asked it why it did not speak."—"Do you see this fine church of Santa Maria Novella? It is that which Michael Angelo called 'his bride.'"—"Look at these bronze gates of the Baptistery, with their high reliefs, cast by Ghiberti five hundred years ago. Michael Angelo said, 'they were fit to be the gates of Paradise.'"—Here is the church, the palace, the Laurentian library, he built. Here is his own house. In the church of Santa Croce are his mortal remains. Whilst he was yet alive, he asked that he might be buried in that church, in such a spot that the dome of the cathedral might be visible from his tomb when the doors of the church stood open. And there and so is he laid. The innumerable pilgrims whom the genius of Italy draws to the city, duly visit this church, which is to Florence what Westminster Abbey is to England. There, near the tomb of Nicholas Machiavelli, the historian and philosopher; of Galileo, the great-hearted astronomer; of Boccaccio, and of Alfieri, stands the monument of Michael Angelo Buonarotti.
Three significant garlands are sculptured on the tomb; they should be four, but that his countrymen feared their own partiality. The forehead of the bust, esteemed a faithful likeness, is furrowed with eight deep wrinkles one above another. The traveller from a distant continent, who gazes on that marble brow, feels that he is not a stranger in the foreign church; for the great name of Michael Angelo sounds hospitably in his ear. He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledge the beauty that beams in universal nature, and who seek by labour and self-denial to approach its source in perfect goodness.
LITERARY ETHICS

An Oration delivered before the Literary Societies of Dartmouth College, July 24, 1838

Gentlemen,—The invitation to address you this day, with which you have honoured me, was a call so welcome, that I made haste to obey it. A summons to celebrate with scholars a literary festival, is so alluring to me, as to overcome the doubts I might well entertain of my ability to bring you any thought worthy of your attention. I have reached the middle age of man; yet I believe I am not less glad or sanguine at the meeting of scholars, than when, a boy, I first saw the graduates of my own College assembled at their anniversary. Neither years nor books have yet availed to extirpate a prejudice then rooted in me, that a scholar is the favourite of heaven and earth, the excellency of his country, the happiest of men. His duties lead him directly into the holy ground where other men's aspirations only point. His successes are occasions of the purest joy to all men. Eyes is he to the blind; feet is he to the lame. His failures, if he is worthy, are inlets to higher advantages. And because the scholar, by every thought he thinks, extends his dominion into the general mind of men, he is not one, but many. The few scholars in each country, whose genius I know, seem to me not individuals, but societies; and, when events occur of great import, I count over these representatives of opinion, whom they will affect, as if I were counting nations. And, even if his results were incommunicable; if they abode in his own spirit; the intellect hath somewhat so sacred in its possessions, that the fact of his existence and pursuits would be a happy omen.

Meantime I know that a very different estimate of the scholar's profession prevails in this country, and the importunity, with which society presses its claim upon young men, tends to pervert the views of the youth in respect to the culture of the intellect. Hence the historical failure, on
which Europe and America have so freely commented. This country has not fulfilled what seemed the reasonable expectation of mankind. Men looked, when all feudal straps and bandages were snapped asunder, that nature, too long the mother of dwarfs, should reimburse itself by a brood of Titans, who should laugh and leap in the continent, and run up the mountains of the West with the errand of genius and of love. But the mark of American merit in painting, in sculpture, in poetry, in fiction, in eloquence, seems to be a certain grace without grandeur, and itself not new but derivative; a vase of fair outline, but empty,—which whoso sees, may fill with what wit and character is in him, but which does not, like the charged cloud, overflow with terrible beauty, and emit lightnings on all beholders.

I will not lose myself in the desultory questions, what are the limitations, and what the causes of the fact. It suffices me to say, in general, that the diffidence of mankind in the soul has crept over the American mind; that men here, as elsewhere, are indisposed to innovation, and prefer any antiquity, any usage, any livery productive of ease or profit, to the unproductive service of thought.

Yet, in every sane hour, the service of thought appears reasonable, the despotism of the senses insane. The scholar may lose himself in schools, in words, and become a pedant; but when he comprehends his duties, he above all men is a realist, and converses with things. For, the scholar is the student of the world, and of what worth the world is, and with what emphasis it accosts the soul of man, such is the worth, such the call of the scholar.

The want of the times, and the propriety of this anniversary, concur to draw attention to the doctrine of Literary Ethics. What I have to say on that doctrine distributes itself under the topics of the resources, the subject, and the discipline of the scholar.

I. The resources of the scholar are proportioned to his confidence in the attributes of the Intellect. The resources of the scholar are co-extensive with nature and truth, yet can never be his, unless claimed by him with an equal greatness of mind. He cannot know them until he has beheld with awe the infinitude and impersonality of the intellectual power. When he has seen, that it is not his, nor any man's,
but that it is the soul which made the world, and that it is all accessible to him, he will know that he, as its minister, may rightfully hold all things subordinate and answerable to it. A divine pilgrim in nature, all things attend his steps. Over him stream the flying constellations; over him streams Time, as they, scarcely divided into months and years. He inhales the year as a vapour: its fragrant midsummer breath, its sparkling January heaven. And so pass into his mind, in bright transfiguration, the grand events of history, to take a new order and scale from him. He is the world; and the epochs and heroes of chronology are pictorial images, in which his thoughts are told. There is no event but sprung somewhere from the soul of man; and therefore there is none but the soul of man can interpret. Every presentiment of the mind is executed somewhere in a gigantic fact. What else is Greece, Rome, England, France, St. Helena? What else are churches, literature, and empires? The new man must feel that he is new, and has not come into the world mortgaged to the opinions and usages of Europe, and Asia, and Egypt. The sense of spiritual independence is like the lovely varnish of the dew, whereby the old, hard, peaked earth, and its old self-same productions, are made new every morning, and shining with the last touch of the artist’s hand. A false humility, a complaisance to reigning schools, or to the wisdom of antiquity, must not defraud me of supreme possession of this hour. If any person have less love of liberty, and less jealousy to guard his integrity, shall he therefore dictate to you and me? Say to such doctors, We are thankful to you, as we are to history, to the pyramids, and the authors; but now our day is come; we have been born out of the eternal silence; and now will we live,—live for ourselves,—and not as the pall-bearers of a funeral, but as the upholders and creators of our age; and neither Greece nor Rome, nor the three Unities of Aristotle, nor the three Kings of Cologne, nor the College of the Sorbonne, nor the Edinburgh Review, is to command any longer. Now that we are here, we will put our own interpretation on things, and our own things for interpretation. Please himself with complaisance who will,—for me, things must take my scale, not I theirs. I will say with the warlike king, “God gave me this crown, and the whole world shall not take it away.”

The whole value of history, of biography, is to increase my
self-trust, by demonstrating what man can be and do. This is the moral of the Plutarchs, the Cudworths, the Tennemanns, who give us the story of men or of opinions. Any history of philosophy fortifies my faith, by showing me, that what high dogmas I had supposed were the rare and late fruit of a cumulative culture, and only now possible to some recent Kant or Fichte,—were the prompt improvisations of the earliest inquiries; of Parmenides, Heraclitus, and Xenophanes. In view of these students, the soul seems to whisper, "There is a better way than this indolent learning of another. Leave me alone; do not teach me out of Leibnitz or Schelling, and I shall find it all out myself."

Still more do we owe to biography the fortification of our hope. If you would know the power of character, see how much you would impoverish the world, if you could take clean out of history the lives of Milton, Shakespeare, and Plato,—these three, and cause them not to be. See you not, how much less the power of man would be? I console myself in the poverty of my thoughts; in the paucity of great men, in the malignity and dulness of the nations, by falling back on these sublime recollections, and seeing what the prolific soul could beget on actual nature;—seeing that Plato was, and Shakespeare, and Milton,—three irrefragable facts. Then I dare; I also will essay to be. The humblest, the most hopeless, in view of these radiant facts, may now theorise and hope. In spite of all the rueful abortions that squeak and gibber in the street, in spite of slumber and guilt, in spite of the army, the bar-room, and the jail, have been these glorious manifestations of the mind; and I will thank my great brothers so truly for the admonition of their being, as to endeavour also to be just and brave, to aspire and to speak. Plotinus too, and Spinoza, and the immortal bards of philosophy,—that which they have written out with patient courage, makes me bold. No more will I dismiss, with haste, the visions which flash and sparkle across my sky; but observe them, approach them, domesticate them, brood on them, and draw out of the past, genuine life for the present hour.

To feel the full value of these lives, as occasions of hope and provocation, you must come to know, that each admirable genius is but a successful diver in that sea whose floor of pearls is all your own. The impoverishing philosophy of
ages has laid stress on the distinctions of the individual, and not on the universal attributes of man. The youth, intoxicated with his admiration of a hero, fails to see, that it is only a projection of his own soul, which he admires. In solitude, in a remote village, the ardent youth loiters and mourns. With inflamed eye, in this sleeping wilderness, he has read the story of the Emperor Charles the Fifth, until his fancy has brought home to the surrounding woods the faint roar of cannonades in the Milanese, and marches in Germany. He is curious concerning that man's day. What filled it? the crowded orders, the stern decisions, the foreign despatches, the Castilian etiquette? The soul answers—Behold his day here! In the sighing of these woods, in the quiet of these gray fields, in the cool breeze that sings out of these northern mountains; in the workmen, the boys, the maidens, you meet,—in the hopes of the morning, the ennui of noon, and sauntering of the afternoon; in the disquieting comparisons; in the regrets at want of vigour; in the great idea, and the puny execution;—behold Charles the Fifth's day; another, yet the same; behold Chatham's, Hampden's, Bayard's, Alfred's, Scipio's, Pericles's day,—day of all that are born of women. The difference of circumstance is merely costume. I am tasting the self-same life,—its sweetness, its greatness, its pain, which I so admire in other men. Do not foolishly ask of the inscrutable, obliterated past, what it cannot tell,—the details of that nature, of that day, called Byron, or Burke;—but ask it of the enveloping Now; the more quaintly you inspect its evanescent beauties, its wonderful details, its spiritual causes, its astounding whole,—so much the more you master the biography of this hero, and that, and every hero. Be lord of a day, through wisdom and justice, and you can put up your history books.

An intimation of these broad rights is familiar in the sense of injury which men feel in the assumption of any man to limit their possible progress. We resent all criticism, which denies us anything that lies in our line of advance. Say to the man of letters, that he cannot paint a Transfiguration, or build a steamboat, or be a grand-marshal,—and he will not seem to himself depreciated. But deny to him any quality of literary or metaphysical power, and he is piqued. Concede to him genius, which is a sort of Stoical plenum annulling the comparative, and he is content; but concede
him talents never so rare, denying him genius, and he is aggrieved. What does this mean? Why simply, that the soul has assurance, by instincts and presentiments, of all power in the direction of its ray, as well as of the special skills it has already acquired.

In order to a knowledge of the resources of the scholar, we must not rest in the use of slender accomplishments,—of faculties to do this and that other feat with words; but we must pay our vows to the highest power, and pass, if it be possible, by assiduous love and watching, into the visions of absolute truth. The growth of the intellect is strictly analogous in all individuals. It is larger reception. Able men, in general, have good dispositions, and a respect for justice; because an able man is nothing else than a good, free, vascular organisation, whereinto the universal spirit freely flows; so that his fund of justice is not only vast, but infinite. All men, in the abstract, are just and good; what hinders them, in the particular, is, the momentary predominance of the finite and individual over the general truth. The condition of our incarnation in a private self, seems to be, a perpetual tendency to prefer the private law, to obey the private impulse, to the exclusion of the law of universal being. The hero is great by means of the predominance of the universal nature; he has only to open his mouth, and it speaks; he has only to be forced to act, and it acts. All men catch the word, or embrace the deed, with the heart, for it is verily theirs as much as his; but in them this disease of an excess of organisation cheats them of equal issues. Nothing is more simple than greatness; indeed, to be simple is to be great. The vision of genius comes by renouncing the too officious activity of the understanding, and giving leave and ampest privilege to the spontaneous sentiment. Out of this must all that is alive and genial in thought go. Men grind and grind in the mill of a truism, and nothing comes out but what was put in. But the moment they desert the tradition for a spontaneous thought, then poetry, wit, hope, virtue, learning, anecdote, all flock to their aid. Observe the phenomenon of extempore debate. A man of cultivated mind, but reserved hibits, sitting silent, admires the miracle of free, impassioned, picturesque speech, in the man addressing an assembly;—a state of being and power, how unlike his own! Presently his own emotion rises to his lips, and
overflows in speech. He must also rise and say somewhat. Once embarked, once having overcome the novelty of the situation, he finds it just as easy and natural to speak—to speak with thoughts, with pictures, with rhythmical balance of sentences—as it was to sit silent; for, it needs not to do, but to suffer; he only adjusts himself to the free spirit which gladly utters itself through him; and motion is as easy as rest.

II. I pass now to consider the task offered to the intellect of this country. The view I have taken of the resources of the scholar, presupposes a subject as broad. We do not seem to have imagined its riches. We have not heeded the invitation it holds out. To be as good a scholar as Englishmen are; to have as much learning as our contemporaries; to have written a book that is read; satisfies us. We assume that all thought is already long ago adequately set down in books—all imaginations in poems; and what we say, we only throw in as confirmatory of this supposed complete body of literature. A very shallow assumption. Say rather, all literature is yet to be written. Poetry has scarce chanted its first song. The perpetual admonition of nature to us is, "The world is new, untried. Do not believe the past. I give you the universe a virgin to-day."

By Latin and English poetry, we were born and bred in an oratorio of praises of nature—flowers, birds, mountains, sun, and moon;—yet the naturalist of this hour finds that he knows nothing, by all their poems, of any of these fine things; that he has conversed with the mere surface and show of them all; and of their essence, or of their history, knowing nothing. Further inquiry will discover that nobody—that not these chanting poets themselves, knew anything sincere of these handsome natures they so commended; that they contented themselves with the passing chirp of a bird, that they saw one or two mornings, and listlessly looked at sunsets, and repeated idly these few glimpses in their song. But go into the forest, you shall find all new and undescribed. The hawking of the wild geese flying by night; the thin note of the companionable titmouse, in the winter day; the fall of swarms of flies, in autumn, from combats high in the air, pattering down on the leaves like rain; the angry hiss of the wood-birds; the pine throwing out its pollen for the benefit
of the next century; the turpentine exuding from the tree;—
and, indeed, any vegetation; any animation; any and all,
are alike unattempted. The man who stands on the sea-
shore, or who rambles in the woods, seems to be the first man
that ever stood on the shore, or entered a grove, his sensa-
tions and his world are so novel and strange. Whilst I read
the poets, I think that nothing new can be said about morning
and evening. But when I see the daybreak, I am not re-
minded of these Homeric, or Shakespearian, or Miltonic, or
Chaucerian pictures. No; but I feel perhaps the pain of an
alien world; a world not yet subdued by the thought; or,
I am cheered by the moist, warm, glittering, budding,
melodious hour, that takes down the narrow walls of my soul,
and extends its life and pulsation to the very horizon. That
is morning, to cease for a bright hour to be a prisoner of this
sickly body, and to become as large as nature.

The noonday darkness of the American forest, the deep,
echoing, aboriginal woods, where the living columns of the
oak and fir tower up from the ruins of the trees of the last
millennium; where, from year to year, the eagle and the
crow see no intruder; the pines, bearded with savage moss,
yet touched with grace by the violets at their feet; the broad,
cold lowland, which forms its coat of vapour with the stillness
of subterranean crystallisation; and where the traveller,
amid the repulsive plants that are native in the swamp,
thinks with pleasing terror of the distant town; this beauty
—haggard and desert beauty, which the sun and the moon,
the snow and the rain, re-paint and vary, has never been
recorded by art, yet is not indifferent to any passenger. All
men are poets at heart. They serve nature for bread, but
her loveliness overcomes them sometimes. What mean these
journeys to Niagara; these pilgrims to the White Hills?
Men believe in the adaptations of utility, always: in the
mountains, they may believe in the adaptations of the eye.
Undoubtedly, the changes of geology have a relation to the
prosperous sprouting of the corn and peas in my kitchen
garden; but not less is there a relation of beauty between
my soul and the dim crags of Agiocochook up there in the
clouds. Every man, when this is told, hearkens with joy,
and yet his own conversation with nature is still unsung.

Is it otherwise with civil history? Is it not the lesson of
our experience that every man, were life long enough, would
write history for himself? What else do these volumes of extracts and manuscript commentaries, that every scholar writes, indicate? Greek history is one thing to me; another to you. Since the birth of Niebuhr and Wolf, Roman and Greek history have been written anew. Since Carlyle wrote French history, we see that no history, that we have, is safe, but a new classifier shall give it new and more philosophical arrangement. Thucydides, Livy, have only provided materials. The moment a man of genius pronounces the name of the Pelasgi, of Athens, of the Etrurian, of the Roman people, we see their state under a new aspect. As in poetry and history, so in the other departments. There are few masters or none. Religion is yet to be settled on its fast foundations in the breast of man; and politics, and philosophy, and letters, and art. As yet we have nothing but tendency and indication.

This starting, this warping of the best literary works from the adamant of nature, is especially observable in philosophy. Let it take what tone of pretension it will, to this complexion must it come, at last. Take, for example, the French Eclecticism, which Cousin esteems so conclusive; there is an optical illusion in it. It avows great pretensions. It looks as if they had all truth, in taking all the systems, and had nothing to do, but to sift and wash and strain, and the gold and diamonds would remain in the last colander. But, Truth is such a flyaway, such a slyboots, so untransportable and unbarrelable a commodity, that it is as bad to catch as light. Shut the shutters never so quick, to keep all the light in, it is all in vain; it is gone before you can cry, Hold. And so it happens with our philosophy. Translate, collate, distil all the systems, it steads you nothing; for truth will not be compelled, in any mechanical manner. But the first observation you make, in the sincere act of your nature, though on the veriest trifle, may open a new view of nature and of man, that, like a menstruum, shall dissolve all theories in it; shall take up Greece, Rome, Stoicism, Eclecticism, and what not, as mere data and food for analysis, and dispose of your world-containing system, as a very little unit. A profound thought, anywhere, classifies all things: a profound thought will lift Olympus. The book of philosophy is only a fact, and no more inspiring fact than another, and no less; but a wise man will never esteem it anything final and transcending.
Go and talk with a man of genius, and the first word he utters sets all your so-called knowledge afloat and at large. Then Plato, Bacon, Kant, and the Eclectic Cousin, condescend instantly to be men and mere facts.

I by no means aim, in these remarks, to disparage the merit of these or of any existing compositions; I only say that any particular portraiture does not in any manner exclude or forestall a new attempt, but, when considered by the soul, warps and shrinks away. The inundation of the spirit sweeps away before it all our little architecture of wit and memory, as straws and straw-huts before the torrent. Works of the intellect are great only by comparison with each other; Ivanhoe and Waverley compared with Castle Radcliffe and the Porter novels; but nothing is great—not mighty Homer and Milton—beside the infinite Reason. It carries them away as a flood. They are as a sleep.

Thus is justice done to each generation and individual—wisdom teaching man that he shall not hate, or fear, or mimic his ancestors; that he shall not bewail himself, as if the world was old, and thought was spent, and he was born into the dotage of things; for, by virtue of the Deity, thought renews itself inexhaustibly every day, and the thing whereon it shines, though it were dust and sand, is a new subject with countless relations.

III. Having thus spoken of the resources and the subject of the scholar, out of the same faith proceeds also the rule of his ambition and life. Let him know that the world is his, but he must possess it by putting himself into harmony with the constitution of things. He must be a solitary, laborious, modest, and charitable soul.

He must embrace solitude as a bride. He must have his glees and his glooms alone. His own estimate must be measure enough, his own praise reward enough for him. And why must the student be solitary and silent? That he may become acquainted with his thoughts. If he pines in a lonely place, hankering for the crowd, for display, he is not in the lonely place; his heart is in the market; he does not see; he does not hear; he does not think. But go cherish your soul; expel companions; set your habits to a life of solitude; then will the faculties rise fair and full within, like forest trees and field flowers; you will have results, which, when
you meet your fellow-men, you can communicate, and they will gladly receive. Do not go into solitude only that you may presently come into public. Such solitude denies itself; is public and stale. The public can get public experience, but they wish the scholar to replace to them those private, sincere, divine experiences, of which they have been defrauded by dwelling in the street. It is the noble, manlike, just thought, which is the superiority demanded of you, and not crowds but solitude confers this elevation. Not insulation of place, but independence of spirit, is essential, and it is only as the garden, the cottage, the forest, and the rock, are a sort of mechanical aids to this, that they are of value. Think alone, and all places are friendly and sacred. The poets who have lived in cities have been hermits still. Inspiration makes solitude anywhere. Pindar, Raphael, Angelo, Dryden, De Staël, dwell in crowds, it may be, but the instant thought comes, the crowd grows dim to their eye; their eye fixes on the horizon—on vacant space; they forget the bystanders; they spurn personal relations; they deal with abstractions, with verities, with ideas. They are alone with the mind.

Of course, I would not have any superstition about solitude. Let the youth study the uses of solitude and of society. Let him use both, not serve either. The reason why an ingenious soul shuns society, is to the end of finding society. It repudiates the false, out of love of the true. You can very soon learn all that society can teach you for one while. Its foolish routine, an indefinite multiplication of balls, concerts, rides, theatres, can teach you no more than a few can. Then accept the hint of shame, of spiritual emptiness and waste, which true nature gives you, and retire, and hide; lock the door; shut the shutters; then welcome falls the imprisoning rain—dear hermitage of nature. Re-collect the spirits. Have solitary prayer and praise. Digest and correct the past experience; and blend it with the new and divine life.

You will pardon me, Gentlemen, if I say, I think that we have need of a more rigorous scholastic rule; such an asceticism, I mean, as only the hardihood and devotion of the scholar himself can enforce. We live in the sun and on the surface—a thin, plausible, superficial existence, and talk of muse and prophet, of art and creation. But out of our shallow and frivolous way of life, how can greatness ever
grow? Come now, let us go and be dumb. Let us sit with our hands on our mouths, a long, austere, Pythagorean lustrum. Let us live in corners, and do chores, and suffer, and weep, and drudge, with eyes and hearts that love the Lord. Silence, seclusion, austerity, may pierce deep into the grandeur and secret of our being, and so diving, bring up out of secular darkness, the sublimities of the moral constitution. How mean to go blazing, a gaudy butterfly, in fashionable or political saloons, the fool of society, the fool of notoriety, a topic for newspapers, a piece of the street, and forfeiting the real prerogative of the russet coat, the privacy, and the true and warm heart of the citizen!

Fatal to the man of letters, fatal to man, is the lust of display, the seeming that unmakes our being. A mistake of the main end to which they labour, is incident to literary men, who, dealing with the organ of language—the subtlest, strongest, and longest-lived of man's creations, and only fitly used as the weapon of thought and of justice—learn to enjoy the pride of playing with this splendid engine, but rob it of its almightiness by failing to work with it. Extricating themselves from the tasks of the world, the world revenges itself by exposing, at every turn, the folly of these incomplete, pedantic, useless, ghostly creatures. The scholar will feel, that the richest romance—the noblest fiction that was ever woven—the heart and soul of beauty—lies enclosed in human life. Itself of surpassing value, it is also the richest material for his creations. How shall he know its secrets of tenderness, of terror, of will, and of fate? How can he catch and keep the strain of upper music that peals from it? Its laws are concealed under the details of daily action. All action is an experiment upon them. He must bear his share of the common load. He must work with men in houses, and not with their names in books. His needs, appetites, talents, affections, accomplishments, are keys that open to him the beautiful museum of human life. Why should he read it as an Arabian tale, and not know, in his own beating bosom, its sweet and smart? Out of love and hatred, out of earnings, and borrowings, and lendings, and losses; out of sickness and pain; out of wooing and worshipping; out of travelling, and voting, and watching, and caring; out of disgrace and contempt, comes our tuition in the serene and beautiful laws. Let him not slur his lesson: let him learn it by heart. Let
him endeavour exactly, bravely, and cheerfully, to solve the problem of that life which is set before him. And this, by punctual action, and not by promises or dreams. Believing, as in God, in the presence and favour of the grandest influences, let him deserve that favour, and learn how to receive and use it, by fidelity also to the lower observances.

This lesson is taught with emphasis in the life of the great actor of this age, and affords the explanation of his success. Bonaparte represents truly a great recent revolution, which we in this country, please God, shall carry to its farthest consummation. Not the least instructive passage in modern history, seems to me a trait of Napoleon, exhibited to the English when he became their prisoner. On coming on board the Bellerophon, a file of English soldiers drawn up on deck gave him a military salute. Napoleon observed that their manner of handling their arms differed from the French exercise, and, putting aside the guns of those nearest him, walked up to a soldier, took his gun, and himself went through the motion in the French mode. The English officers and men looked on with astonishment, and inquired if such familiarity was usual with the Emperor.

In this instance, as always, that man, with whatever defects or vices, represented performance in lieu of pretension. Feudalism and Orientalism had long enough thought it majestic to do nothing; the modern majesty consists in work. He belonged to a class fast growing in the world, who think, that what a man can do is his greatest ornament, and that he always consults his dignity by doing it. He was not a believer in luck; he had a faith, like sight, in the application of means to ends. Means to ends, is the motto of all his behaviour. He believed that the great captains of antiquity performed their exploits only by correct combinations, and by justly comparing the relation between means and consequences; efforts and obstacles. The vulgar call good fortune that which really is produced by the calculations of genius. But Napoleon, thus faithful to facts, had also this crowning merit; that, whilst he believed in number and weight, and omitted no part of prudence, he believed also in the freedom and quite incalculable force of the soul. A man of infinite caution, he neglected never the least particular of preparation, of patient adaptation; yet nevertheless he had a sublime confidence, as in his all, in the sallies of the courage,
and the faith in his destiny, which, at the right moment, repaired all losses, and demolished cavalry, infantry, king, and kaiser, as with irresistible thunderbolts. As they say the bough of the tree has the character of the leaf, and the whole tree of the bough, so, it is curious to remark, Bonaparte's army partook of this double strength of the captain; for, whilst strictly supplied in all its appointments, and everything expected from the valour and discipline of every platoon, in flank and centre, yet always remained his total trust in the prodigious revolutions of fortune, which his reserved Imperial Guard were capable of working, if, in all else, the day was lost. Here he was sublime. He no longer calculated the chance of the cannon ball. He was faithful to tactics to the uttermost—and when all tactics had come to an end, then, he dilated, and availed himself of the mighty saltations of the most formidable soldiers in nature.

Let the scholar appreciate this combination of gifts, which, applied to better purpose, make true wisdom. He is a revealer of things. Let him first learn the things. Let him not, too eager to grasp some badge of reward, omit the work to be done. Let him know that, though the success of the market is in the reward, true success is the doing; that, in the private obedience to his mind; in the sedulous inquiry, day after day, year after year, to know how the thing stands; in the use of all means, and most in the reverence of the humble commerce and humble needs of life,—to hearken what they say, and so, by mutual reaction of thought and life, to make thought solid, and life wise; and in a contempt for the gabble of to-day's opinions, the secret of the world is to be learned, and the skill truly to unfold it is acquired. Or rather, is it not, that, by this discipline, the usurpation of the senses is overcome, and the lower faculties of man are subdued to docility; through which, as an unobstructed channel, the soul now easily and gladly flows?

The good scholar will not refuse to bear the yoke in his youth; to know, if he can, the uttermost secret of toil and endurance; to make his own hands acquainted with the soil by which he is fed, and the sweat that goes before comfort and luxury. Let him pay his tithe, and serve the world as a true and noble man; never forgetting to worship the immortal divinities, who whisper to the poet, and make him the utterer of melodies that pierce the ear of eternal time. If he have
this twofold goodness,—the drill and the inspiration,—then he has health; then he is a whole, and not a fragment; and the perfection of his endowment will appear in his compositions. Indeed, this twofold merit characterises ever the productions of great masters. The man of genius should occupy the whole space between God or pure mind, and the multitude of uneducated men. He must draw from the infinite Reason, on one side; and he must penetrate into the heart and sense of the crowd, on the other. From one, he must draw his strength; to the other he must owe his aim. The one yokes him to the real; the other, to the apparent. At one pole, is Reason; at the other, Common Sense. If he be defective at either extreme of the scale, his philosophy will seem low and utilitarian; or it will appear too vague and indefinite for the uses of life.

The student, as we all along insist, is great only by being passive to the superincumbent spirit. Let this faith, then, dictate all his action. Snares and bribes abound to mislead him; let him be true nevertheless. His success has its perils too. There is somewhat inconvenient and injurious in his position. They whom his thoughts have entertained or inflamed, seek him before yet they have learned the hard conditions of thought. They seek him, that he may turn his lamp on the dark riddles whose solution they think is inscribed on the walls of their being. They find that he is a poor, ignorant man, in a white-seamed, rusty coat, like themselves, nowise emitting a continuous stream of light, but now and then a jet of luminous thought, followed by total darkness; moreover, that he cannot make of his infrequent illumination a portable taper to carry whither he would, and explain now this dark riddle, now that. Sorrow ensues. The scholar regrets to damp the hope of ingenuous boys; and the youth has lost a star out of his new flaming firmament. Hence the temptation to the scholar to mystify; to hear the question; to sit upon it; to make an answer of words, in lack of the oracle of things. Not the less let him be cold and true, and wait in patience, knowing that truth can make even silence eloquent and memorable. Truth shall be policy enough for him. Let him open his breast to all honest inquiry, and be an artist superior to tricks of art. Show frankly as a saint would do, your experience, methods, tools, and means. Welcome all comers to the freest use of
the same. And out of this superior frankness and charity, you shall learn higher secrets of your nature, which gods will bend and aid you to communicate.

If, with a high trust, he can thus submit himself, he will find that ample returns are poured into his bosom, out of what seemed hours of obstruction and loss. Let him not grieve too much on account of unfit associates. When he sees how much thought he owes to the disagreeable antagonism of various persons who pass and cross him, he can easily think that in a society of perfect sympathy, no word, no act, no record, would be. He will learn, that it is not much matter what he reads, what he does. Be a scholar, and he shall have the scholar's part of everything. As, in the counting-room, the merchant cares little whether the cargo be hides or barilla; the transaction, a letter of credit or a transfer of stocks; be it what it may, his commission comes gently out of it; so you shall get your lesson out of the hour, and the object, whether it be a concentrated or a wasteful employment, even in reading a dull book, or working off a stint of mechanical day labour, which your necessities or the necessities of others impose.

Gentlemen, I have ventured to offer you these considerations upon the scholar's place, and hope, because I thought, that, standing, as many of you now do, on the threshold of this College, girt and ready to go and assume tasks, public and private, in your country, you would not be sorry to be admonished of those primary duties of the intellect, whereof you will seldom hear from the lips of your new companions. You will hear every day the maxims of a low prudence. You will hear, that the first duty is to get land and money, place and name. "What is this Truth you seek? what is this Beauty?" men will ask, with derision. If, nevertheless, God have called any of you to explore truth and beauty, be bold, be firm, be true. When you shall say, "As others do, so will I: I renounce, I am sorry for it, my early visions; I must eat the good of the land and let learning and romantic expectations go, until a more convenient season;"—then dies the man in you; then once more perish the buds of art, and poetry, and science, as they have died already in a thousand thousand men. The hour of that choice is the crisis of your history; and see that you hold yourself fast
by the intellect. It is this domineering temper of the sensual world that creates the extreme need of the priests of science; and that it is the office and right of the intellect to make and not take its estimate. Bend to the persuasion which is flowing to you from every object in nature, to be its tongue to the heart of man, and to show the besotted world how passing fair is wisdom. Forewarned that the vice of the times and the country is an excessive pretension, let us seek the shade, and find wisdom in neglect. Be content with a little light, so it be your own. Explore, and explore. Be neither chided nor flattered out of your position of perpetual inquiry. Neither dogmatise, nor accept another's dogmatism. Why should you renounce your right to traverse the star-lit deserts of truth, for the premature comforts of an acre, house, and barn? Truth also has its roof, and bed, and board. Make yourself necessary to the world, and mankind will give you bread, and if not store of it, yet such as shall not take away your property in all men's possessions, in all men's affections, in art, in nature, and in hope.

You will not fear, that I am enjoining too stern an asceticism. Ask not, Of what use is a scholarship that systematically retreats? or, Who is the better for the philosopher who conceals his accomplishments, and hides his thoughts from the waiting world? Hides his thoughts! Hide the sun and moon. Thought is all light, and publishes itself to the universe. It will speak, though you were dumb, by its own miraculous organ. It will flow out of your actions, your manners, and your face. It will bring you friendships. It will impledge you to truth by the love and expectation of generous minds. By virtue of the laws of that Nature, which is one and perfect, it shall yield every sincere good that is in the soul, to the scholar beloved of earth and heaven.
WAR

It has been a favourite study of modern philosophy, to indicate the steps of human progress, to watch the rising of a thought in one man's mind, the communication of it to a few, to a small minority, its expansion and general reception, until it publishes itself to the world by destroying the existing laws and institutions, and the generation of new. Looked at in this general and historical way, many things wear a very different face from that they show near by, and one at a time,—and, particularly, war. War, which to sane men at the present day, begins to look like an epidemic insanity, breaking out here and there like the cholera or influenza, infecting men's brains instead of their bowels,—when seen in the remote past, in the infancy of society, appears a part of the connection of events, and, in its place, necessary.

As far as history has preserved to us the slow unfoldings of any savage tribe, it is not easy to see how war could be avoided by such wild, passionate, needy, ungoverned, strong-bodied creatures. For in the infancy of society, when a thin population and improvidence make the supply of food and of shelter insufficient and very precarious, and when hunger, thirst, ague, and frozen limbs universally take precedence of the wants of the mind and the heart, the necessities of the strong will certainly be satisfied at the cost of the weak, at whatever peril of future revenge. It is plain, too, that in the first dawning of the religious sentiment, that blends itself with their passions and is oil to the fire. Not only every tribe has war-gods, religious festivals in victory, but religious wars.

The student of history acquiesces the more readily in this copious bloodshed of the early annals, bloodshed in God's name too, when he learns that it is a temporary and preparatory state, and does actively forward the culture of man. War educates the senses, calls into action the will, perfects the physical constitution, brings men into such swift and close collision in critical moments that man
measures man. On its own scale, on the virtues it loves, it endures no counterfeit, but shakes the whole society until every atom falls into the place its specific gravity assigns it. It presently finds the value of good sense and of foresight, and Ulysses takes rank next to Achilles. The leaders, picked men of a courage and vigour tried and augmented in fifty battles, are emulous to distinguish themselves above each other by new merits, as clemency, hospitality, splendour of living. The people imitate the chiefs. The strong tribe, in which war has become an art, attack and conquer their neighbours, and teach them their arts and virtues. New territory, augmented numbers, and extended interests call out new virtues and abilities, and the tribe makes long strides. And, finally, when much progress has been made, all its secrets of wisdom and art are disseminated by its invasions. Plutarch, in his essay "On the Fortune of Alexander," considers the invasion and conquest of the East by Alexander as one of the most bright and pleasing pages in history; and it must be owned he gives sound reason for his opinion. It had the effect of uniting into one great interest the divided commonwealths of Greece, and infusing a new and more enlarged public spirit into the councils of their statesmen. It carried the arts and language and philosophy of the Greeks into the sluggish and barbarous nations of Persia, Assyria, and India. It introduced the arts of husbandry among tribes of hunters and shepherds. It weaned the Scythians and Persians from some cruel and licentious practices to a more civil way of life. It introduced the sacredness of marriage among them. It built seventy cities, and sowed the Greek customs and humane laws over Asia, and united hostile nations under one code. It brought different families of the human race together,—to blows at first, but afterwards to truce, to trade, and to intermarriage. It would be very easy to show analogous benefits that have resulted from military movements of later ages.

Considerations of this kind lead us to a true view of the nature and office of war. We see, it is the subject of all history; that it has been the principal employment of the most conspicuous men; that it is at this moment the delight of half the world, of almost all young and ignorant persons; that it is exhibited to us continually in the dumb show of brute nature, where war between tribes, and between in-
individuals of the same tribe, perpetually rages. The microscope reveals miniature butchery in atomies and infinitely small biters, that swim and fight in an illuminated drop of water; and the little globe is but a too faithful miniature of the large.

What does all this war, beginning from the lowest races and reaching up to man, signify? Is it not manifest that it covers a great and beneficent principle, which nature had deeply at heart? What is that principle?—It is self-help. Nature implants with life the instinct of self-help, perpetual struggle to be, to resist opposition, to attain to freedom, to attain to a mastery, and the security of a permanent, self-defended being; and to each creature these objects are made so dear, that it risks its life continually in the struggle for these ends.

But whilst this principle, necessarily, is inwrought into the fabric of every creature, yet it is but one instinct; and though a primary one, or we may say the very first, yet the appearance of the other instincts immediately modifies and controls this; turns its energies into harmless, useful, and high courses, showing thereby what was its ultimate design; and, finally, takes out its fangs. The instinct of self-help is very early unfolded in the coarse and merely brute form of war, only in the childhood and imbecility of the other instincts, and remains in that form only until their development. It is the ignorant and childish part of mankind that is the fighting part. Idle and vacant minds want excitement, as all boys kill cats. Bull-baiting, cockpits, and the boxer's ring, are the enjoyment of the part of society whose animal nature alone has been developed. In some parts of this country, where the intellectual and moral faculties have as yet scarcely any culture, the absorbing topic of all conversation is whipping; who fought, and which whipped? Of man, boy, or beast, the only trait that much interests the speakers is the pugnacity. And why? Because the speaker has as yet no other image of manly activity and virtue, none of endurance, none of perseverance, none of charity, none of the attainment of truth. Put him into a circle of cultivated men, where the conversation broaches the great questions that besiege the human reason, and he would be dumb and unhappy, as an Indian in church.

To men of a sedate and mature spirit, in whom is any
knowledge or mental activity, the detail of battle becomes insupportably tedious and revolting. It is like the talk of one of those monomaniacs, whom we sometimes meet in society, who converse on horses; and Fontenelle expressed a volume of meaning when he said, "I hate war, for it spoils conversation."

Nothing is plainer than that the sympathy with war is a juvenile and temporary state. Not only the moral sentiment, but trade, learning, and whatever makes intercourse, conspire to put it down. Trade, as all men know, is the antagonist of war. Wherever there is no property, the people will put on the knapsack for bread; but trade is instantly endangered and destroyed. And, moreover, trade brings men to look each other in the face, and gives the parties the knowledge that these enemies over sea or over the mountain are such men as we; who laugh and grieve, who love and fear, as we do. And learning and art, and especially religion, weave ties that make war look like fratricide, as it is. And as all history is the picture of war, as we have said, so it is no less true that it is the record of the mitigation and decline of war. Early in the eleventh and twelfth centuries, the Italian cities had grown so populous and strong, that they forced the rural nobility to dismantle their castles, which were dens of cruelty, and come and reside in the towns. The Popes, to their eternal honour, declared religious jubilees, during which all hostilities were suspended throughout Christendom, and man had a breathing space. The increase of civility has abolished the use of poison and of torture, once supposed as necessary as navies now. And, finally, the art of war—with what gunpowder and tactics—has made, as all men know, battles less frequent and less murderous.

By all these means, war has been steadily on the decline; and we read with astonishment of the beastly fighting of the old times. Only in Elizabeth’s time, out of the European waters, piracy was all but universal. The proverb was,—"No peace beyond the line;" and the seaman shipped on the buccaneer’s bargain, "No prey, no pay." In 1588, the celebrated Cavendish, who was thought in his times a good Christian man, wrote thus to Lord Hunsdon, on his return from a voyage round the world:—"Sept. 1588. It hath pleased Almighty God to suffer me to circumpass the whole
globe of the world, entering in at the Strait of Magellan, and returning by the Cape of Buena Esperança; in which voyage, I have either discovered or brought certain intelligence of all the rich places of the world, which were ever discovered by any Christian. I navigated along the coast of Chili, Peru, and New Spain, where I made great spoils. I burnt and sunk nineteen sail of ships, small and great. All the villages and towns that ever I landed at, I burned and spoiled. And had I not been discovered upon the coast, I had taken great quantity of treasure. The matter of most profit to me was a great ship of the king's, which I took at California," etc. And the good Cavendish piously begins this statement,—"It hath pleased Almighty God."

Indeed, our American annals have preserved the vestiges of barbarous warfare down to more recent times. I read in Williams's History of Maine, that "Assacombuit, the Sagamore of the Anagunti-cook tribe, was remarkable for his turpitude and ferocity above all other known Indians; that, in 1705, Vaudreuil sent him to France, where he was introduced to the king. When he appeared at court, he lifted up his hand, and said, 'This hand has slain a hundred and fifty of your majesty's enemies within the territories of New England.' This so pleased the king, that he knighted him, and ordered a pension of eight livres a day to be paid him during life." This valuable person, on his return to America, took to killing his own neighbours and kindred, with such appetite that his tribe combined against him, and would have killed him, had he not fled his country for ever.

The scandal which we feel in such facts certainly shows that we have got on a little. All history is the decline of war, though the slow decline. All that society has yet gained is mitigation: the doctrine of the right of war still remains.

For ages (for ideas work in ages, and animate vast societies of men) the human race has gone on under the tyranny—shall I so call it?—of this first brutish form of their effort to be men; that is, for ages they have shared so much of the nature of the lower animals, the tiger and the shark, and the savages of the water-drop. They have nearly exhausted all the good and all the evil of this form: they have held as fast to this degradation as their worst enemy could desire; but all things have an end, and so has this. The eternal
germination of the better has unfolded new powers, new instincts, which were really concealed under this rough and base rind. The sublime question has startled one and another happy soul in different quarters of the globe. Cannot love be, as well as hate? Would not love answer the same end, or even a better? Cannot peace be, as well as war?

This thought is no man's invention, neither St. Pierre's nor Rousseau's, but the rising of the general tide in the human soul,—and rising highest, and first made visible, in the most simple and pure souls, who have therefore announced it to us beforehand; but presently we all see it. It has now become so distinct as to be a social thought: societies can be formed on it. It is expounded, illustrated, defined, with different degrees of clearness; and its actualisation, or the measures it should inspire, predicted according to the light of each seer.

The idea itself is the epoch; the fact that it has become so distinct to any small number of persons as to become a subject of prayer and hope, of concert and discussion,—that is the commanding fact. This having come, much more will follow. Revolutions go not backward. The star once risen, though only one man in the hemisphere has yet seen its upper limb in the horizon, will mount and mount, until it becomes visible to other men, to multitudes, and climbs the zenith of all eyes. And so, it is not a great matter how long men refuse to believe the advent of peace: war is on its last legs; and a universal peace is as sure as is the prevalence of civilisation over barbarism, of liberal governments over feudal forms. The question for us is only How soon?

That the project of peace should appear visionary to great numbers of sensible men; should appear laughable, even, to numbers; should appear to the grave and good-natured to be embarrassed with extreme practical difficulties,—is very natural. "This is a poor, tedious society of yours," they say: "we do not see what good can come of it. Peace! why, we are all at peace now. But if a foreign nation should wantonly insult or plunder our commerce, or, worse yet, should land on our shores to rob and kill, you would not have us sit, and be robbed and killed? You mistake the times; you over-estimate the virtue of men. You forget, that the quiet which now sleeps in cities and in farms, which lets the wagon go unguarded and the farm-house unbolted, rests on the
perfect understanding of all men; that the musket, the halter, and the jail stand behind there, ready to punish any disturber of it. All admit that this would be the best policy, if the world were all a church, if all men were the best men, if all would agree to accept this rule. But it is absurd for one nation to attempt it alone."

In the first place, we answer, that we never make much account of objections which merely respect the actual state of the world at this moment, but which admit the general expediency and permanent excellence of the project. What is the best must be the true; and what is true—that is, what is at bottom fit and agreeable to the constitution of man—must at last prevail over all obstruction and all opposition. There is no good now enjoyed by society, that was not once as problematical and visionary as this. It is the tendency of the true interest of man to become his desire and steadfast aim.

But, farther, it is a lesson which all history teaches wise men, to put trust in ideas, and not in circumstances. We have all grown up in the sight of frigates and navy yards, of armed forts and islands, of arsenals and militia. The reference to any foreign register will inform us of the number of thousand or million men that are now under arms in the vast colonial system of the British empire, of Russia, Austria, and France; and one is scared to find at what a cost the peace of the globe is kept. This vast apparatus of artillery, of fleets, of stone bastions and trenches and embankments; this incessant patrolling of sentinels; this waving of national flags; this reveille and evening gun; this martial music, and endless playing of marches, and singing of military and naval songs, seem to us to constitute an imposing actual, which will not yield, in centuries, to the feeble, deprecatory voices of a handful of friends of peace.

Thus always we are daunted by the appearances; not seeing that their whole value lies at bottom in the state of mind. It is really a thought that built this portentous war-establishment, and a thought shall also melt it away. Every nation and every man instantly surround themselves with a material apparatus which exactly corresponds to their moral state, or their state of thought. Observe how every truth and every error, each a thought of some man’s mind, clothes itself with societies, houses, cities, language, ceremonies, news-
papers. Observe the ideas of the present day,—orthodoxy, scepticism, missions, popular education, temperance, anti-masonry, anti-slavery; see how each of these abstractions has embodied itself in an imposing apparatus in the community; and how timber, brick, lime, and stone have flown into convenient shape, obedient to the master-idea reigning in the minds of many persons.

You shall hear, some day, of a wild fancy, which some man has in his brain, of the mischief of secret oaths. Come again, one or two years afterwards, and you shall see it has built great houses of solid wood and brick and mortar. You shall see an hundred presses printing a million sheets; you shall see men and horses and wheels made to walk, run, and roll for it: this great body of matter thus executing that one man's wild thought. This happens daily, yearly about us, with half thoughts, often with flimsy lies, pieces of policy and speculation. With good nursing, they will last three or four years, before they will come to nothing. But when a truth appears,—as, for instance, a perception in the wit of one Columbus, that there is land in the Western Sea; though he alone of all men has that thought, and they all jeer,—it will build ships; it will build fleets; it will carry over half Spain and half England; it will plant a colony, a state, nations, and half a globe full of men.

We surround ourselves always, according to our freedom and ability, with true images of ourselves in things, whether it be ships or books or cannons or churches. The standing army, the arsenal, the camp, and the gibbet do not appertain to man. They only serve as an index to show where man is now; what a bad, ungoverned temper he has; what an ugly neighbour he is; how his affections halt; how low his hope lies. He who loves the bristle of bayonets, only sees in their glitter what beforehand he feels in his heart. It is avarice and hatred; it is that quivering lip, that cold, hating eye, which builded magazines and powder-houses.

It follows of course that the least change in the man will change his circumstances; the least enlargement of his ideas, the least mitigation of his feelings, in respect to other men; if, for example, he could be inspired with a tender kindness to the souls of men, and should come to feel that every man was another self, with whom he might come to join, as left hand works with right. Every degree of the ascendancy of this
feeling would cause the most striking changes of external things: the tents would be struck; the men-of-war would rot ashore; the arms rust; the cannon would become street-posts; the pikes, a fisher’s harpoon; the marching regiment would be a caravan of emigrants, *peaceful* pioneers at the fountains of the Wabash and the Missouri. And so it must and will be: bayonet and sword must first retreat a little from their ostentatious prominence; then quite hide themselves, as the sheriff’s halter does now, inviting the attendance only of relations and friends; and then, lastly, will be transferred to the museums of the curious, as poisoning and torturing tools are at this day.

War and peace thus resolve themselves into a mercury of the state of cultivation. At a certain stage of his progress, the man fights, if he be of a sound body and mind. At a certain higher stage, he makes no offensive demonstration, but is alert to repel injury, and of an unconquerable heart. At a still higher stage, he comes into the region of holiness; passion has passed away from him; his warlike nature is all converted into an active medicinal principle; he sacrifices himself, and accepts with alacrity wearisome tasks of denial and charity; but, being attacked, he bears it and turns the other cheek, as one engaged, throughout his being, no longer to the service of an individual, but to the common soul of all men.

Since the peace question has been before the public mind, those who affirm its right and expediency have naturally been met with objections more or less weighty. There are cases frequently put by the curious,—moral problems, like those problems in arithmetic, which in long winter evenings the rustics try the hardness of their heads in ciphering out. And chiefly it is said,—Either accept this principle for better, for worse, carry it out to the end, and meet its absurd consequences; or else, if you pretend to set an arbitrary limit, a "Thus far, no farther," then give up the principle, and take that limit which the common sense of all mankind has set, and which distinguishes offensive war as criminal, defensive war as just. Otherwise, if you go for no war, then be consistent, and give up self-defence in the highway, in your own house. Will you push it thus far? Will you stick to your principle of non-resistance when your strong-box is broken open, when
your wife and babes are insulted and slaughtered in your sight? If you say yes, you only invite the robber and assassin; and a few bloody-minded desperadoes would soon butcher the good.

In reply to this charge of absurdity on the extreme peace doctrine, as shown in the supposed consequences, I wish to say that such deductions consider only one half of the fact. They look only at the passive side of the friend of peace, only at his passivity; they quite omit to consider his activity. But no man, it may be presumed, ever embraced the cause of peace and philanthropy, for the sole end and satisfaction of being plundered and slain. A man does not come the length of the spirit of martyrdom, without some active purpose, some equal motive, some flaming love. If you have a nation of men who have risen to that height of moral cultivation that they will not declare war or carry arms, for they have not so much madness left in their brains, you have a nation of lovers, of benefactors, of true, great, and able men. Let me know more of that nation; I shall not find them defenceless, with idle hands springing at their sides. I shall find them men of love, honour, and truth; men of an immense industry; men whose influence is felt to the end of the earth; men whose very look and voice carry the sentence of honour and shame; and all forces yield to their energy and persuasion. Whenever we see the doctrine of peace embraced by a nation, we may be assured it will not be one that invites injury; but one, on the contrary, which has a friend in the bottom of the heart of every man, even of the violent and the base; one against which no weapon can prosper; one which is looked upon as the asylum of the human race, and has the tears and the blessings of mankind.

In the second place, as far as it respects individual action in difficult and extreme cases, I will say, such cases seldom or never occur to the good and just man; nor are we careful to say, or even to know, what in such crises is to be done. A wise man will never impawn his future being and action, and decide beforehand what he shall do in a given extreme event. Nature and God will instruct him in that hour.

The question naturally arises, How is this new aspiration of the human mind to be made visible and real? How is it to pass out of thoughts into things?
Not, certainly, in the first place, in the way of routine and mere forms,—the universal specific of modern politics; not by organising a society, and going through a course of resolutions and public manifestoes, and being thus formally accredited to the public, and to the civility of the newspapers. We have played this game to tediousness. In some of our cities they choose noted duellists as presidents and officers of anti-duelling societies. Men who love that bloated vanity called public opinion, think all is well if they have once got their bantling through a sufficient course of speeches and cheerings, of one, two, or three public meetings, as if they could do anything: they vote and vote, cry hurrah on both sides, no man responsible, no man caring a pin. The next season, an Indian war, or an aggression on our commerce by Malays; or the party this man votes with has an appropriation to carry through Congress: instantly he wags his head the other way, and cries, Havoc and war!

This is not to be carried by public opinion, but by private opinion, by private conviction, by private, dear, and earnest love. For the only hope of this cause is in the increased insight, and it is to be accomplished by the spontaneous teaching, of the cultivated soul, in its secret experience and meditation,—that it is now time that it should pass out of the state of beast into the state of man; it is to hear the voice of God, which bids the devils that have rended and torn him, come out of him, and let him now be clothed and walk forth in his right mind.

Nor, in the next place, is the peace principle to be carried into effect by fear. It can never be defended, it can never be executed, by cowards. Everything great must be done in the spirit of greatness. The manhood that has been in war must be transferred to the cause of peace, before war can lose its charm, and peace be venerable to men.

The attractiveness of war shows one thing through all the throats of artillery, the thunders of so many sieges, the sack of towns, the jousts of chivalry, the shock of hosts,—this namely, the conviction of man universally, that a man should be himself responsible, with goods, health, and life, for his behaviour; that he should not ask of the State, protection; should ask nothing of the State; should be himself a kingdom and a state; fearing no man; quite willing to use the oppor-
tunities and advantages that good government throw in his way, but nothing daunted, and not really the poorer if government, law, and order went by the board; because in himself reside infinite resources; because he is sure of himself, and never needs to ask another what in any crisis it behooves him to do.

What makes to us the attractiveness of the Greek heroes? of the Roman? What makes the attractiveness of that romantic style of living, which is the material of ten thousand plays and romances, from Shakspeare to Scott; the feudal baron, the French, the English nobility, the Warwicks, Plantagenets? It is their absolute self-dependence. I do not wonder at the dislike some of the friends of peace have expressed at Shakespeare. The veriest churl and Jacobin cannot resist the influence of the style and manners of these haughty lords. We are affected, as boys and barbarians are, by the appearance of a few rich and wilful gentlemen, who take their honour into their own keeping, defy the world, so confident are they of their courage and strength, and whose appearance is the arrival of so much life and virtue. In dangerous times, they are presently tried, and therefore their name is a flourish of trumpets. They, at least, affect us as a reality. They are not shams, but the substance of which that age and world is made. They are true heroes for their time. They make what is in their minds the greatest sacrifice. They will, for an injurious word, peril all their state and wealth, and go to the field. Take away that principle of responsibleness, and they become pirates and ruffians.

This self-subsistency is the charm of war; for this self-subsistency is essential to our idea of man. But another age comes, a truer religion and ethics open, and a man puts himself under the dominion of principles. I see him to be the servant of truth, of love, and of freedom, and immovable in the waves of the crowd. The man of principle, that is, the man who, without any flourish of trumpets, titles of lordship, or train of guards, without any notice of his action abroad, expecting none, takes in solitude the right step uniformly, on his private choice, and disdaining consequences,—does not yield, in my imagination, to any man. He is willing to be hanged at his own gate, rather than consent to any compromise of his freedom or the suppression of his con-
vi
tion. I regard no longer those names that so tingled in
my ear. This is a baron of a better nobility and a stouter
stomach.

The cause of peace is not the cause of cowardice. If peace
is sought to be defended or preserved for the safety of the
luxurious and the timid, it is a sham, and the peace will be
base. War is better, and the peace will be broken. If
peace is to be maintained, it must be by brave men, who
have come up to the same height as the hero, namely, the
will to carry their life in their hand, and stake it at any
instant for their principle, but who have gone one step
beyond the hero, and will not seek another man's life;—men
who have, by their intellectual insight, or else by their moral
elevation, attained such a perception of their own intrinsic
worth, that they do not think property or their own body
a sufficient good to be saved by such dereliction of principle
as treating a man like a sheep.

If the universal cry for reform of so many inveterate
abuses, with which society rings,—if the desire of a large
class of young men for a faith and hope, intellectual and
religious, such as they have not yet found, be an omen to be
trusted; if the disposition to rely more in study, and in
action on the unexplored riches of the human constitution,—
if the search of the sublime laws of morals and the sources
of hope and trust in man, and not in books,—in the present,
and not in the past,—proceed; if the rising generation can
be provoked to think it unworthy to nestle into every
abomination of the past, and shall feel the generous darings
of austerity and virtue, then war has a short day, and
human blood will cease to flow.

It is of little consequence in what manner, through what
organs, this purpose of mercy and holiness is effected. The
proposition of the Congress of Nations is undoubtedly that
at which the present fabric of our society and the present
course of events do point. But the mind, once prepared
for the reign of principles, will easily find modes of express-
ing its will. There is the highest fitness in the place and
time in which this enterprise is begun. Not in an obscure
corner, not in a feudal Europe, not in an antiquated appanage
where no onward step can be taken without rebellion, is this
seed of benevolence laid in the furrow, with tears of hope;
but in this broad America of God and man, where the forest
is only now falling, or yet to fall, and the green earth opened
to the inundation of emigrant men from all quarters of
oppression and guilt; here, where not a family, not a few
men, but mankind, shall say what shall be; here, we ask,
Shall it be War, or shall it be Peace?
THE CONDUCT OF LIFE

I.—FATE

Delicate omens traced in air
To the lone bard true witness bare;
Birds with auguries on their wings
Chanted undeceiving things,
Him to beckon, him to warn;
Well might then the poet scorn
To learn of scribe or courier
Hints writ in vaster character;
And on his mind, at dawn of day,
Soft shadows of the evening lay.
For the prevision is allied
Unto the thing so signified;
Or say, the foresight that awaits
Is the same Genius that creates.

It chanced during one winter, a few years ago, that our critics were bent on discussing the theory of the Age. By an odd coincidence, four or five noted men were each reading a discourse to the citizens of Boston or New York, on the Spirit of the Times. It so happened that the subject had the same prominence in some remarkable pamphlets and journals issued in London in the same season. To me, however, the question of the times resolved itself into a practical question of the conduct of life. How shall I live? We are incompetent to solve the times. Our geometry cannot span the huge orbits of the prevailing ideas, behold their return, and reconcile their opposition. We can only obey our own polarity. 'Tis fine for us to speculate and elect our course, if we must accept an irresistible dictation.

In our first steps to gain our wishes, we come upon immovable limitations. We are fired with the hope to reform men. After many experiments, we find that we must begin earlier—at school. But the boys and girls are not docile; we can make nothing of them. We decide that they are not of good stock. We must begin our reform earlier still—at generation: that is to say, there is Fate, or laws of the world.
But, if there be irresistible dictation, this dictation understands itself. If we must accept Fate, we are not less compelled to affirm liberty, the significance of the individual, the grandeur of duty, the power of character. This is true, and that other is true. But our geometry cannot span these extreme points, and reconcile them. What to do? By obeying each thought frankly, by harping, or, if you will, pounding on each string, we learn at last its power. By the same obedience to other thoughts, we learn theirs, and then comes some reasonable hope of harmonising them. We are sure, that, though we know not how, necessity does comport with liberty, the individual with the world, my polarity with the spirit of the times. The riddle of the age has for each a private solution. If one would study his own time, it must be by this method of taking up in turn each of the leading topics which belong to our scheme of human life, and, by firmly stating all that is agreeable to experience on one, and doing the same justice to the opposing facts in the others, the true limitations will appear. Any excess of emphasis, on one part, would be corrected, and a just balance would be made.

But let us honestly state the facts. Our America has a bad name for superficialness. Great men, great nations, have not been boasters and buffoons, but perceivers of the terror of life, and have manned themselves to face it. The Spartan, embodying his religion in his country, dies before its majesty without a question. The Turk, who believes his doom is written on the iron leaf in the moment when he entered the world, rushes on the enemy's sabre with undivided will. The Turk, the Arab, the Persian, accepts the fore-ordained fate.

"On two days, it steads not to run from thy grave,
The appointed, and the unappointed day;
On the first, neither balm nor physician can save,
Nor thee, on the second, the Universe slay."

The Hindoo, under the wheel, is as firm. Our Calvinists, in the last generation, had something of the same dignity. They felt that the weight of the Universe held them down to their place. What could they do? Wise men feel that there is something which cannot be talked or voted away—a strap or belt which girds the world.
"The Destiny, minister general,  
That executeth in the world o'er all,  
The purveyance which God hath seen before,  
So strong it is, that tho' the world had sworn  
The contrary of a thing by yea or nay,  
Yet sometime it shall fallen on a day  
That falleth not oft in a thousand year,  
For, certainly, our appetites here,  
Be it of war, or peace, or hate, or love,  
All this is ruled by the sight above."

Chaucer: The Knighte's Tale.

The Greek Tragedy expressed the same sense: "Whatever is fated, that will take place. The great immense mind of Jove is not to be transgressed."

Savages cling to a local god of one tribe or town. The broad ethics of Jesus were quickly narrowed to village theologies, which preach an election or favouritism. And, now and then, an amiable parson, like Jung Stilling, or Robert Huntington, believes in a pistareen-Providence, which, whenever the good man wants a dinner, makes that somebody shall knock at his door, and leave a half-dollar. But Nature is no sentimentalist—does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman; but swallows your ship like a grain of dust. The cold, inconsiderate of persons, tingles your blood, benumbs your feet, freezes a man like an apple. The diseases, the elements, fortune, gravity, lightning, respect no persons. The way of Providence is a little rude. The habit of snake and spider, the snap of the tiger and other leapers and bloody jumpers, the crackle of the bones of his prey in the coil of the anaconda—these are in the system, and our habits are like theirs. You have just dined, and, however scrupulously the slaughter-house is concealed in the graceful distance of miles, there is complicity—expensive races—race living at the expense of race. The planet is liable to shocks from comets, perturbations from planets, rendings from earthquake and volcano, alterations of climate, precessions of equinoxes. Rivers dry up by opening of the forest. The sea changes its bed. Towns and counties fall into it. At Lisbon, an earthquake killed men like flies. At Naples, three years ago, ten thousand persons were crushed in a few minutes. The scurvy at sea; the sword of the climate in the west of Africa, at Cayenne, at Panama, at New Orleans, cut off men like a massacre. Our western prairie
shakes with fever and ague. The cholera, the small-pox, have proved as mortal to some tribes, as a frost to the crickets, which, having filled the summer with noise, are silenced by a fall of the temperature of one night. Without uncovering what does not concern us, or counting how many species of parasites hang on a bombyx; or groping after intestinal parasites, or infusory biters, or the obscurities of alternate generation;—the forms of the shark, the labrus, the jaw of the sea-wolf payed with crushing teeth, the weapons of the grampus, and other warriors hidden in the sea—are hints of ferocity in the interiors of nature. Let us not deny it up and down. Providence has a wild, rough, incalculable road to its end, and it is of no use to try to whitewash its huge, mixed instrumentalities, or to dress up that terrific benefactor in a clean shirt and white neckcloth of a student in divinity.

Will you say, the disasters which threaten mankind are exceptional, and one need not lay his account for cataclysms every day? Ay, but what happens once, may happen again, and so long as these strokes are not to be parried by us, they must be feared.

But these shocks and ruins are less destructive to us, than the stealthy power of other laws which act on us daily. An expense of ends to means is fate;—organisation tyrannising over character. The menagerie, or forms and powers of the spine, is a book of fate: the bill of the bird, the skull of the snake, determines tyrannically its limits. So is the scale of races, of temperaments; so is sex; so is climate; so is the reaction of talents imprisoning the vital power in certain directions. Every spirit makes its house; but afterwards the house confines the spirit.

The gross lines are legible to the dull: the cabman is phrenologist so far: he looks in your face to see if his shilling is sure. A dome of brow denotes one thing; a pot-belly another; a squint, a pug-nose, mats of hair, the pigment of the epidermis, betray character. People seem sheathed in their tough organisation. Ask Spurzheim, ask the doctors, ask Quetelet, if temperaments decide nothing? or if there be anything they do not decide? Read the description in medical books of the four temperaments, and you will think you are reading your own thoughts which you had not yet told. Find the part which black eyes, and which blue eyes,
play severally in the company. How shall a man escape from his ancestors, or draw off from his veins the black drop which he drew from his father’s or his mother’s life? It often appears in a family, as if all the qualities of the progenitors were potted in several jars—some ruling quality in each son or daughter of the house—and sometimes the unmixed temperament, the rank unmitigated elixir, the family vice, is drawn off in a separate individual, and the others are proportionally relieved. We sometimes see a change of expression in our companion, and say, his father, or his mother, comes to the windows of his eyes, and sometimes a remote relative. In different hours, a man represents each of several of his ancestors, as if there were seven or eight of us rolled up in each man’s skin—seven or eight ancestors at least—and they constitute the variety of notes for that new piece of music which his life is. At the corner of the street, you read the possibility of each passenger, in the facial angle, in the complexion, in the depth of his eye. His parentage determines it. Men are what their mothers made them. You may as well ask a loom which weaves huckaback, why it does not make cashmere, as expect poetry from this engineer or a chemical discovery from that jobber. Ask the digger in the ditch to explain Newton’s laws: the fine organs of his brains have been pinched by overwork and squalid poverty from father to son, for a hundred years. When each comes forth from his mother’s womb, the gate of gifts closes behind him. Let him value his hands and feet, he has but one pair. So he has but one future, and that is already predetermined in his lobes, and described in that little fatty face, pig-eye, and squat form. All the privilege and all the legislation of the world cannot meddle or help to make a poet or a prince of him.

Jesus said, “When he looketh on her, he hath committed adultery.” But he is an adulterer before he has yet looked on the woman, by the superfluity of animal, and the defect of thought, in his constitution. Who meets him, or who meets her, in the street, sees that they are ripe to be each other’s victim.

In certain men, digestion and sex absorb the vital force, and the stronger these are, the individual is so much weaker. The more of these drones perish, the better for the hive. If, later, they give birth to some superior individual, with force
enough to add to this animal a new aim, and a complete apparatus to work it out, all the ancestors are gladly forgotten. Most men and most women are merely one couple more. Now and then, one has a new cell or camarilla opened in his brain—an architectural, a musical, or a philological knack, some stray taste or talent for flowers, or chemistry, or pigments, or story-telling, a good hand for drawing, a good foot for dancing, an athletic frame for wide journeying, etc.—which skill nowise alters rank in the scale of nature, but serves to pass the time, the life of sensation going on as before. At last, these hints and tendencies are fixed in one, or in a succession. Each absorbs so much food and force, as to become itself a new centre. The new talent draws off so rapidly the vital force, that not enough remains for the animal functions, hardly enough for health; so that, in the second generation, if the like genius appear, the health is visibly deteriorated, and the generative force impaired.

People are born with the moral or with the material bias;—uterine brothers with this diverging destination: and I suppose with high magnifiers, Mr. Frauenhofer or Dr. Carpenter might come to distinguish in the embryo at the fourth day, this is a Whig, and that a Free-soiler.

It was a poetic attempt to lift this mountain of Fate, to reconcile this despotism of race with liberty, which led the Hindoos to say, "Fate is nothing but the deeds committed in a prior state of existence." I find the coincidence of the extremes of eastern and western speculation in the daring statement of Schelling, "there is in every man a certain feeling, that he has been what he is from all eternity, and by no means became such in time." To say it less sublimely—in the history of the individual is always an account of his condition, and he knows himself to be a party to his present estate.

A good deal of our politics is physiological. Now and then, a man of wealth in the heyday of youth adopts the tenet of broadest freedom. In England, there is always some man of wealth and large connection planting himself, during all his years of health, on the side of progress, who, as soon as he begins to die, checks his forward play, calls in his troops, and becomes conservative. All conservatives are such from personal defects. They have been effeminated by position or nature, born halt and blind, through luxury
of their parents, and can only, like invalids, act on the
defensive. But strong natures, backwoodsmen, New Hamp-
shire giants, Napoleons, Burkes, Broughams, Websters,
Kossuths, are inevitable patriots, until their life ebbs, and
their defects and gout, palsy and money, warp them.

The strongest idea incarnates itself in majorities and
nations, in the healthiest and strongest. Probably, the
election goes by avoirdupois weight, and, if you could weigh
bodily the tonnage of any hundred of the Whig and the
Democratic party in a town, on the Dearborn balance, as
they passed the hayscales, you could predict with certainty
which party would carry it. On the whole, it would be rather
the speediest way of deciding the vote, to put the selectmen
or the mayor and aldermen at the hayscales.

In science, we have to consider two things: power and
circumstance. All we know of the egg, from each successive
discovery, is, another vesicle; and if, after five hundred years,
you get a better observer, or a better glass, he finds within
the last observed another. In vegetable and animal tissue,
it is just alike, and all that the primary power or spasm
operates, is, still, vesicles, vesicles. Yes—but the tyrannical
Circumstance! A vesicle in new circumstances, a vesicle
lodged in darkness, Oken thought, became animal; in
light, a plant. Lodged in the parent animal, it suffers
changes, which end in unsheathing miraculous capability in
the unaltered vesicle, and it unlocks itself to fish, bird, or
quadruped, head and foot, eye and claw. The Circumstance
is Nature. Nature is, what you may do. There is much
you may not. We have two things—the circumstance, and
the life. Once we thought, positive power was all. Now
we learn, that negative power, or circumstance, is half.
Nature is the tyrannous circumstance, the thick skull, the
sheathed snake, the ponderous, rock-like jaw; necessitated
activity; violent direction; the conditions of a tool, like the
locomotive, strong enough on its track, but which can do
nothing but mischief off it; or skates, which are wings on
the ice, but fetters on the ground.

The book of Nature is the book of Fate. She turns the
gigantic pages—leaf after leaf—never re-turning one. One
leaf she lays down, a floor of granite; then a thousand ages,
and a bed of slate; a thousand ages, and a measure of coal;
a thousand ages, and a layer of marl and mud: vegetable
forms appear; her first misshapen animals, zoophyte, trilobium, fish, then, saurians—rude forms, in which she has only blocked her future statue, concealing under these unwieldy monsters the fine type of her coming king. The face of the planet cools and dries, the races meliorate, and man is born. But when a race has lived its term, it comes no more again.

The population of the world is a conditional population; not the best, but the best that could live now; and the scale of tribes, and the steadiness with which victory adheres to one tribe, and defeat to another, is as uniform as the superposition of strata. We know in history what weight belongs to race. We see the English, French, and Germans, planting themselves on every shore and market of America and Australia, and monopolising the commerce of these countries. We like the nervous and victorious habit of our own branch of the family. We follow the step of the Jew, of the Indian, of the Negro. We see how much will has been expended to extinguish the Jew, in vain. Look at the unpalatable conclusions of Knox, in his Fragment of Races,—a rash and unsatisfactory writer, but charged with pungent and unforgettable truths. "Nature respects race, and not hybrids." "Every race has its own habitat." "Detach a colony from the race, and it deteriorates to the crab." See the shades of the picture. The German and Irish millions, like the Negro, have a great deal of guano in their destiny. They are ferried over the Atlantic, and carted over America, to ditch and to drudge, to make corn cheap, and then to lie down prematurely to make a spot of green grass on the prairie.

One more fagot of these adamantine bandages, is, the new science of Statistics. It is a rule, that the most casual and extraordinary events—if the basis of population is broad enough—become matter of fixed calculation. It would not be safe to say when a captain like Bonaparte, a singer like Jenny Lind, or a navigator like Bowditch, would be born in Boston: but, on a population of twenty or two hundred millions, something like accuracy may be had.¹

¹ "Everything which pertains to the human species, considered as a whole, belongs to the order of physical facts. The greater the number of individuals, the more does the influence of the individual will disappear, leaving predominance to a series of general facts dependent on causes by which society exists, and is preserved."—QUETELET
The Conduct of Life

'Tis frivolous to fix pedantically the date of particular inventions. They have all been invented over and over fifty times. Man is the arch machine, of which all these shifts drawn from himself are toy models. He helps himself on each emergency by copying or duplicating his own structure, just so far as the need is. 'Tis hard to find the right Homer, Zoroaster, or Menu; harder still to find the Tubal Cain, or Vulcan, or Cadmus, or Copernicus, or Fust, or Fulton, the indisputable inventor. There are scores and centuries of them. "The air is full of men." This kind of talent so abounds, this constructive tool-making efficiency, as if it adhered to the chemic atoms, as if the air he breathes were made of Vaucansons, Franklins, and Watts.

Doubtless, in every million there will be an astronomer, a mathematician, a comic poet, a mystic. No one can read the history of astronomy, without perceiving that Copernicus, Newton, Laplace, are not new men, or a new kind of men, but that Thales, Anaximenes, Hipparchus, Empedocles, Aristotle, Pythagoras, Ænopides, had anticipated them; each had the same tense geometrical brain, apt for the same vigorous computation and logic, a mind parallel to the movement of the world. The Roman mile probably rested on a measure of a degree of the meridian. Mahometan and Chinese know what we know of leap-year, of the Gregorian calendar, and of the precession of the equinoxes. As, in every barrel of cowries, brought to New Bedford, there shall be one orangia, so there will, in a dozen millions of Malays and Mahometans, be one or two astronomical skulls. In a large city, the most casual things, and things whose beauty lies in their casualty, are produced as punctually and to order as the baker’s muffin for breakfast. Punch makes exactly one capital joke a week; and the journals contrive to furnish one good piece of news every day.

And not less work the laws of repression, the penalties of violated functions. Famine, typhus, frost, war, suicide, and effete races, must be reckoned calculable parts of the system of the world.

These are pebbles from the mountain, hints of the terms by which our life is walled up, and which show a kind of mechanical exactness, as of a loom or mill, in what we call casual or fortuitous events.

The force with which we resist these torrents of tendency
looks so ridiculously inadequate, that it amounts to little more than a criticism or a protest made by a minority of one, under compulsion of millions. I seemed, in the height of a tempest, to see men overboard struggling in the waves, and driven about here and there. They glanced intelligently at each other, but 'twas little they could do for one another; 'twas much if each could keep afloat alone. Well, they had a right to their eye-beams, and all the rest was Fate.

We cannot trifle with this reality, this cropping out in our planted gardens of the core of the world. No picture of life can have any veracity that does not admit the odious facts. A man's power is hooped in by a necessity, which, by many experiments, he touches on every side, until he learns its arc.

The element running through entire nature, which we popularly call Fate, is known to us as limitation. Whatever limits us, we call Fate. If we are brute and barbarous, the fate takes a brute and dreadful shape. As we refine, our checks become finer. If we rise to spiritual culture, the antagonism takes a spiritual form. In the Hindoo fables, Vishnu follows Maya through all her ascending changes, from insect and crawfish up to elephant; whatever form she took, he took the male form of that kind, until she became at last woman and goddess, and he a man and a god. The limitations refine as the soul purifies, but the ring of necessity is always perched at the top.

When the gods in the Norse heaven were unable to bind the Fenris Wolf with steel or with weight of mountains—the one he snapped and the other he spurned with his heel—they put round his foot a limp band softer than silk or cobweb, and this held him: the more he spurned it, the stiffer it drew. So soft and so stanch is the ring of Fate. Neither brandy, nor nectar, nor sulphuric ether, nor hell-fire, nor ichor, nor poetry, nor genius, can get rid of this limp band. For if we give it the high sense in which the poets use it, even thought itself is not above Fate: that too must act according to eternal laws, and all that is wilful and fantastic in it is in opposition to its fundamental essence.

And, last of all, high over thought, in the world of morals, Fate appears as vindicator, levelling the high, lifting the low, requiring justice in man, and always striking soon or late, when justice is not done. What is useful will last;
what is hurtful will sink. "The doer must suffer," said the Greeks: "you would soothe a Deity not to be soothed." "God himself cannot procure good for the wicked," said the Welsh triad. "God may consent, but only for a time," said the bard of Spain. The limitation is impassable by any insight of man. In its last and loftiest ascensions, insight itself, and the freedom of the will, is one of its obedient members. But we must not run into generalisations too large, but show the natural bounds or essential distinctions, and seek to do justice to the other elements as well.

Thus we trace Fate, in matter, mind, and morals—in race, in retardations of strata, and in thought and character as well. It is everywhere bound or limitation. But fate has its lord; limitation its limits; is different seen from above and from below; from within and from without. For, though Fate is immense, so is power, which is the other fact in the dual world, immense. If Fate follows and limits power, power attends and antagonises Fate. We must respect Fate as natural history, but there is more than natural history. For who and what is this criticism that pries into the matter? Man is not order of nature, sack and sack, belly and members, link in a chain, nor any ignominious baggage, but a stupendous antagonism, a dragging together of the poles of the Universe. He betrays his relation to what is below him—thick-skulled, small-brained, fishy, quadrumanous—quadruped ill-disguised, hardly escaped into biped, and has paid for the new powers by loss of some of the old ones. But the lightning which explodes and fashions planets, maker of planets and suns, is in him. On one side, elemental order, sandstone and granite, rock-ledges, peat-bog, forest, sea and shore; and, on the other part, thought, the spirit which composes and decomposes nature—here they are, side by side, god and devil, mind and matter, king and conspirator, belt and spasm, riding peacefully together in the eye and brain of every man.

Nor can he blink the freewill, To hazard the contradiction—freedom is necessary. If you please to plant yourself on the side of Fate, and say, Fate is all; then we say, a part of Fate is the freedom of man. For ever wells up the impulse of choosing and acting in the soul. Intellect annuls Fate. So far as a man thinks, he is free. And though nothing is
more disgusting than the crowing about liberty by slaves, as most men are, and the flippant mistaking for freedom of some paper preamble like a "Declaration of Independence," or the statute right to vote, by those who have never dared to think or to act, yet it is wholesome to man to look not at Fate, but the other way: the practical view is the other. His sound relation to these facts is to use and command, not to cringe to them. "Look not on nature, for her name is fatal," said the oracle. The too much contemplation of these limits induces meanness. They who talk much of destiny, their birth-star, etc., are in a lower dangerous plane, and invite the evils they fear.

I cited the instinctive and heroic races as proud believers in Destiny. They conspire with it; a loving resignation is with the event. But the dogma makes a different impression, when it is held by the weak and lazy. 'Tis weak and vicious people who cast the blame on Fate. The right use of Fate is to bring up our conduct to the loftiness of nature. Rude and invincible except by themselves are the elements. So let man be. Let him empty his breast of his windy conceits, and show his lordship by manners and deeds on the scale of nature. Let him hold his purpose as with the tug of gravitation. No power, no persuasion, no bribe shall make him give up his point. A man ought to compare advantageously with a river, an oak, or a mountain. He shall have not less the flow, the expansion, and the resistance of these.

'Tis the best use of Fate to teach a fatal courage. Go face the fire at sea, or the cholera in your friend's house, or the burglar in your own, or what danger lies in the way of duty, knowing you are guarded by the cherubim of Destiny. If you believe in Fate to your harm, believe it, at least, for your good.

For, if Fate is so prevailing, man also is part of it, and can confront fate with fate. If the Universe have these savage accidents, our atoms are as savage in resistance. We should be crushed by the atmosphere, but for the reaction of the air within the body. A tube made of a film of glass can resist the shock of the ocean, if filled with the same water. If there be omnipotence in the stroke, there is omnipotence of recoil.

1. But Fate against Fate is only parrying and defence: there are, also, the noble creative forces. The revelation of
Thought takes man out of servitude into freedom. We rightly say of ourselves, we were born, and afterward we were born again, and many times. We have successive experiences so important, that the new forgets the old, and hence the mythology of the seven or the nine heavens. The day of days, the great day of the feast of life, is that in which the inward eye opens to the Unity in things, to the omnipresence of law;—sees that what is must be, and ought to be, or is the best. This beatitude dips from on high down on us, and we see. It is not in us so much as we are in it. If the air come to our lungs, we breathe and live; if not, we die. If the light come to our eyes, we see; else not. And if truth come to our mind, we suddenly expand to its dimensions, as if we grew to worlds. We are as lawgivers; we speak for Nature; we prophesy and divine.

This insight throws us on the party and interest of the Universe, against all and sundry; against ourselves, as much as others. A man speaking from insight affirms of himself what is true of the mind: seeing its immortality, he says, I am immortal; seeing its invincibility, he says, I am strong. It is not in us, but we are in it. It is of the maker, not of what is made. All things are touched and changed by it. This uses, and is not used. It distances those who share it, from those who share it not. Those who share it not are flocks and herds. It dates from itself; not from former men or better men—gospel, or constitution, or college, or custom. Where it shines, Nature is no longer intrusive, but all things make a musical or pictorial impression. The world of men show like a comedy without laughter:—populations, interests, government, history;—'tis all toy figures in a toy house. It does not overvalue particular truths. We hear eagerly every thought and word quoted from an intellectual man. But, in his presence, our own mind is roused to activity, and we forget very fast what he says, much more interested in the new play of our own thought, than in any thought of his. 'Tis the majesty into which we have suddenly mounted, the impersonality, the scorn of egotisms, the sphere of laws, that engage us. Once we were stepping a little this way, and a little that way; now, we are as men in a balloon, and do not think so much of the point we have left, or the point we would make, as of the liberty and glory of the way.

Just as much intellect as you add, so much organic power.
He who sees through the design, presides over it, and must will that which must be. We sit and rule, and, though we sleep, our dream will come to pass. Our thought, though it were only an hour old, affirms an oldest necessity, not to be separated from thought, and not to be separated from will. They must always have co-existed. It apprises us of its sovereignty and godhead, which refuse to be severed from it. It is not mine or thine, but the will of all mind. It is poured into the souls of all men, as the soul itself which constitutes them men. I know not whether there be, as is alleged, in the upper region of our atmosphere, a permanent westerly current, which carries with it all atoms which rise to that height, but I see, that when souls reach a certain clearness of perception, they accept a knowledge and motive above selfishness. A breath of will blows eternally through the universe of souls in the direction of the Right and Necessary. It is the air which all intellects inhale and exhale, and it is the wind which blows the worlds into order and orbit.

Thought dissolves the material universe, by carrying the mind up into a sphere where all is plastic. Of two men, each obeying his own thought, he whose thought is deepest will be the strongest character. Always one man more than another represents the will of Divine Providence to the period.

2. If thought makes free, so does the moral sentiment. The mixtures of spiritual chemistry refuse to be analysed. Yet we can see that with the perception of truth is joined the desire that it shall prevail. That affection is essential to will. Moreover, when a strong will appears, it usually results from a certain unity of organisation, as if the whole energy of body and mind flowed in one direction. All great force is real and elemental. There is no manufacturing a strong will. There must be a pound to balance a pound. Where power is shown in will, it must rest on the universal force. Alaric and Bonaparte must believe they rest on a truth, or their will can be bought or bent. There is a bribe possible for any finite will. But the pure sympathy with universal ends is an infinite force, and cannot be bribed or bent. Whoever has had experience of the moral sentiment cannot choose but believe in unlimited power. Each pulse from that heart is an oath from the Most High. I know not what the word sublime means, if it be not the intimations in this infant of a terrific force. A text of heroism, a name and anecdote of courage,
are not arguments, but sallies of freedom. One of these is the verse of the Persian Hafiz, "'Tis written on the gate of Heaven, 'Woe unto him who suffers himself to be betrayed by Fate!'" Does the reading of history make us fatalists? What courage does not the opposite opinion show! A little whim of will to be free gallantly contending against the universe of chemistry.

But insight is not will, nor is affection will. Perception is cold, and goodness dies in wishes; as Voltaire said, 'tis the misfortune of worthy people that they are cowards; "un des plus grands malheurs des honnêtes gens c'est qu'ils sont des lâches." There must be a fusion of these two to generate the energy of will. There can be no driving force, except through the conversion of the man into his will, making him the will, and the will him. And one may say boldly, that no man has a right perception of any truth, who has not been reacted on by it, so as to be ready to be its martyr.

The one serious and formidable thing is nature is a will. Society is servile from want of will, and therefore the world wants saviours and religions. One way is right to go: the hero sees it, and moves on that aim, and has the world under him for root and support. He is to others as the world. His approbation is honour; his dissent, infamy. The glance of his eye has the force of sunbeams. A personal influence towers up in memory only worthy, and we gladly forget numbers, money, climate, gravitation, and the rest of Fate.

We can afford to allow the limitation, if we know it is the meter of the growing man. We stand against Fate, as children stand up against the wall in their father's house, and notch their height from year to year. But when the boy grows to man, and is master of the house, he pulls down that wall, and builds a new and bigger. 'Tis only a question of time. Every brave youth is in training to ride, and rule this dragon. His science is to make weapons and wings of these passions and retarding forces. Now whether, seeing these two things, fate and power, we are permitted to believe in unity? The bulk of mankind believe in two gods. They are under one dominion here in the house, as friend and parent, in social circles, in letters, in art, in love, in religion: but in mechanics, in dealing with steam and climate, in trade, in politics, they think they come under another; and that it
would be a practical blunder to transfer the method and way of working of one sphere into the other. What good, honest, generous men at home, will be wolves and foxes on change! What pious men in the parlour will vote for what reprobates at the polls! To a certain point, they believe themselves the care of a Providence. But in a steamboat, in an epidemic, in war, they believe a malignant energy rules.

But relation and connection are not somewhere and sometimes, but everywhere and always. The divine order does not stop where their sight stops. The friendly power works on the same rules, in the next farm and the next planet. But where they have not experience, they run against it, and hurt themselves. Fate, then, is a name for facts not yet passed under the fire of thought—for causes which are unpenetrated.

But every jet of chaos which threatens to exterminate us, is convertible by intellect into wholesome force. Fate is unpenetrated causes. The water drowns ship and sailor, like a grain of dust. But learn to swim, trim your bark, and the wave which drowned it will be cloven by it, and carry it, like its own foam, a plume and a power. The cold is inconsiderate of persons, tinges your blood, freezes a man like a dew-drop. But learn to skate, and the ice will give you a graceful, sweet, and poetical motion. The cold will brace your limbs and brain to genius, and make you foremost men of time. Cold and sea will train an imperial Saxon race, which nature cannot bear to lose, and, after cooping it up for a thousand years in yonder England, gives a hundred Englands, a hundred Mexicos. All the bloods it shall absorb and domineer: and more than Mexicos—the secrets of water and steam, the spasms of electricity, the ductility of metals, the chariot of the air, the ruddered balloon, are awaiting you.

The annual slaughter from typhus far exceeds that of war; but right drainage destroys typhus. The plague in the sea-service from scurvy is healed by lemon juice and other diets portable or procurable; the depopulation by cholera and small-pox is ended by drainage and vaccination; and every other pest is not less in the chain of cause and effect, and may be fought off. And, whilst art draws out the venom, it commonly extorts some benefits from the vanquished enemy. The mischievous torrent is taught to drudge for man: the wild beasts he makes useful for food, or dress, or labour; the
chemic explosions are controlled like his watch. These are now the steeds on which he rides. Man moves in all modes, by legs of horses, by wings of wind, by steam, by gas of balloon, by electricity, and stands on tiptoe threatening to hunt the eagle in his own element. There is nothing he will not make his carrier.

Steam was, till the other day, the devil which we dreaded. Every pot made by any human potter or brazier had a hole in its cover, to let off the enemy, lest he should lift pot and roof, and carry the house away. But the Marquis of Worcester, Watt, and Fulton bethought themselves that, where was power was not devil, but was God; that it must be availed of, and not by any means let off and wasted. Could he lift pots and roofs and houses so handily? he was the workman they were in search of. He could be used to lift away, chain, and compel other devils, far more reluctant and dangerous, namely, cubic miles of earth, mountains, weight or resistance of water, machinery, and the labours of all men in the world; and time he shall lengthen, and shorten space.

It has not fared much otherwise with higher kinds of steam. The opinion of the million was the terror of the world, and it was attempted, either to dissipate it, by amusing nations, or to pile it over with strata of society—a layer of soldiers; over that, a layer of lords; and a king on the top; with clamps and hoops of castles, garrisons, and police. But, sometimes, the religious principle would get in, and burst the hoops, and rive every mountain laid on top of it. The Fultons and Watts of politics, believing in unity, saw that it was a power, and, by satisfying it (as justice satisfies everybody), through a different disposition of society—grouping it on a level, instead of piling it into a mountain—they have contrived to make of this terror the most harmless and energetic form of a State.

Very odious, I confess, are the lessons of Fate. Who likes to have a dapper phrenologist pronouncing on his fortunes? Who likes to believe that he has hidden in his skull, spine, and pelvis, all the vices of a Saxon or Celtic race, which will be sure to pull him down—with what grandeur of hope and resolve he is fired—into a selfish, huckstering, servile, dodging animal? A learned physician tells us, the fact is invariable with the Neapolitan that, when mature, he assumes the forms
of the unmistakable scoundrel. That is a little overstated—but may pass.

But these are magazines and arsenals. A man must thank his defects, and stand in some terror of his talents. A transcendent talent draws so largely on his forces, as to lame him; a defect pays him revenues on the other side. The sufferance, which is the badge of the Jew, has made him, in these days, the ruler of the rulers of the earth. If Fate is ore and quarry, if evil is good in the making, if limitation is power that shall be, if calamities, oppositions, and weights are wings and means—we are reconciled.

Fate involves the melioration. No statement of the universe can have any soundness, which does not admit its ascending effort. The direction of the whole, and of the parts, is toward benefit, and in proportion to the health. Behind every individual closes organisation: before him opens liberty—the better, the best. The first and worst races are dead. The second and imperfect races are dying out, or remain for the maturing of higher. In the latest race, in man, every generosity, every new perception, the love and praise he extorts from his fellows, are certificates of advance out of fate into freedom. Liberation of the will from the sheaths and clogs of organisation which he has cut-grown, is the end and aim of this world. Every calamity is a spur and valuable hint; and where his endeavours do not yet fully avail, they tell as tendency. The whole circle of animal life—tooth against tooth—devouring war, war for food, a yelp of pain and a grunt of triumph, until, at last, the whole menagerie, the whole chemical mass, is mellowed and refined for higher use—pleases at a sufficient perspective.

But to see how fate slides into freedom, and freedom into fate, observe how far the roots of every creature run, or find, if you can, a point where there is no thread of connection. Our life is consentaneous and far-related. This knot of nature is so well tied, that nobody was ever cunning enough to find the two ends. Nature is intricate, overlapped, inter-weaved, and endless. Christopher Wren said of the beautiful King’s College chapel, “that, if anybody would tell him where to lay the first stone, he would build such another.” But where shall we find the first atom in this house of man, which is all consent, inosculalation, and balance of parts?

The web of relation is shown in habitat, shown in hyber-
nation. When hibernation was observed, it was found, that, whilst some animals become torpid in winter, others were torpid in summer: hibernation then was a false name. The long sleep is not an effect of cold, but is regulated by the supply of food proper to the animal. It becomes torpid when the fruit or prey it lives on is not in season, and regains its activity when its food is ready.

Eyes are found in light; ears in auricular air; feet on land; fins in water; wings in air; and each creature where it was meant to be, with a mutual fitness. Every zone has its own Fauna. There is adjustment between the animal and its food, its parasite, its enemy. Balances are kept. It is not allowed to diminish in numbers, nor to exceed. The like adjustments exist for man. His food is cooked when he arrives; his coal in the pit; the house ventilated; the mud of the deluge dried; his companions arrived at the same hour, and awaiting him with love, concert, laughter, and tears. These are coarse adjustments, but the invisible are not less. There are more belongings to every creature than his air and his food. His instincts must be met, and he has predisposing power that bends and fits what is near him to his use. He is not possible until the invisible things are right for him, as well as the visible. Of what changes, then, in sky and earth, and in finer skies and earths, does the appearance of some Dante or Columbus apprise us!

How is this effected? Nature is no spendthrift, but takes the shortest way to her ends. As the general says to his soldiers, "If you want a fort, build a fort," so nature makes every creature do its own work and get its living,—is it planet, animal, or tree. The planet makes itself. The animal cell makes itself;—then, what it wants. Every creature,—wren or dragon,—shall make its own lair. As soon as there is life, there is self-direction, and absorbing and using of material. Life is freedom,—life in the direct ratio of its amount. You may be sure, the new-born man is not inert. Life works both voluntarily and supernaturally in its neighbourhood. Do you suppose he can be estimated by his weight in pounds, or that he is contained in his skin,—this reaching, radiating, jaculating fellow? The smallest candle fills a mile with its rays, and the papillæ of a man run out to every star.

When there is something to be done the world knows how
to get it done. The vegetable eye makes leaf, pericarp, root, bark, or thorn, as the need is; the first cell converts itself into stomach, mouth, nose, or nail, according to the want; the world throws its life into a hero or a shepherd; and puts him where he is wanted. Dante and Columbus were Italians in their time: they would be Russians or Americans to-day. Things ripen, new men come. The adaptation is not capricious. The ulterior aim, the purpose beyond itself, the correlation by which planets subside and crystallise, then animate beasts and men, will not stop, but will work into finer particulars, and from finer to finest.

The secret of the world is, the tie between person and event. Person makes event and event person. The "times," "the age," what is that, but a few profound persons and a few active persons who epitomise the times? —Goethe, Hegel, Metternich, Adams, Calhoun, Guizot, Peel, Cobden, Kossuth, Rothschild, Astor, Brunel, and the rest. The same fitness must be presumed between a man and the time and event, as between the sexes, or between a race of animals and the food it eats, or the inferior races it uses. He thinks his fate alien, because the copula is hidden. But the soul contains the event that shall befall it, for the event is only the actualisation of its thoughts; and what we pray to ourselves for is always granted. The event is the print of your form. It fits you like your skin. What each does is proper to him. Events are the children of his body and mind. We learn that the soul of Fate is the soul of us, as Hafiz sings—

"Alas! till now I had not known,
My guide and fortune's guide are one."

All the toys that infatuate men, and which they play for,—houses, land, money, luxury, power, fame,—are the selfsame thing, with a new gauze or two of illusion overlaid. And of all the drums and rattles by which men are made willing to have their heads broke, and are led out solemnly every morning to parade,—the most admirable is this by which we are brought to believe that events are arbitrary, and independent of actions. At the conjuror's we detect the hair by which he moves his puppet, but we have not eyes sharp enough to descry the thread that ties cause and effect.

Nature magically suits the man to his fortunes, by making these the fruit of his character. Ducks take to the water,
The Conduct of Life

171

eagles to the sky, waders to the sea margin, hunters to the forest, clerks to counting-rooms, soldiers to the frontier. Thus events grow on the same stem with persons; are sub-persons. The pleasure of life is according to the man that lives it, and not according to the work or the place. Life is an ecstasy. We know what madness belongs to love,—what power to paint a vile object in hues of heaven. As insane persons are indifferent to their dress, diet, and other accommodations, and, as we do in dreams, with equanimity, the most absurd acts, so, a drop more of wine in our cup of life will reconcile us to strange company and work. Each creature puts forth from itself its own condition and sphere, as the slug sweats out its slimy house on the pear-leaf, and the woolly aphides on the apple perspire their own bed, and the fish its shell. In youth, we clothe ourselves with rainbows, and go as brave as the zodiac. In age, we put out another sort of perspiration,—gout, fever, rheumatism, caprice, doubt, fretting, and avarice.

A man's fortunes are the fruit of his character. A man's friends are his magnetisms. We go to Herodotus and Plutarch for examples of Fate; but we are examples. "Quisque suos patimur manes." The tendency of every man to enact all that is in his constitution is expressed in the old belief, that the efforts which we make to escape from our destiny only serve to lead us into it: and I have noticed, a man likes better to be complimented on his position, as the proof of the last or total excellence, than on his merits.

A man will see his character emitted in the events that seem to meet, but which exude from and accompany him. Events expand with the character. As once he found himself among toys, so now he plays a part in colossal systems, and his growth is declared in his ambition, his companions, and his performance. He looks like a piece of luck, but is a piece of causation;—the mosaic, angulated and ground to fit into the gap he fills. Hence in each town there is some man who is, in his brain and performance, an explanation of the tillage, production, factories, banks, churches, ways of living, and society, of that town. If you do not chance to meet him, all that you see will leave you a little puzzled: if you see him, it will become plain. We know in Massachusetts who built New Bedford, who built Lynn, Lowell, Lawrence, Clinton, Fitchburg, Holyoke, Portland, and many another noisy
mart. Each of these men, if they were transparent, would seem to you not so much men, as walking cities, and, wherever you put them, they would build one.

History is the action and reaction of these two,—Nature and Thought;—two boys pushing each other on the curb-stone of the pavement. Everything is pusher or pushed: and matter and mind are in perpetual tilt and balance so. Whilst the man is weak, the earth takes up him. He plants his brain and affections. By-and-by he will take up the earth, and have his gardens and vineyards in the beautiful order and productiveness of his thought. Every solid in the universe is ready to become fluid on the approach of the mind, and the power to flux it is the measure of the mind. If the wall remain adamant, it accuses the want of thought. To a subtler force, it will stream into new forms, expressive of the character of the mind. What is the city in which we sit here, but an aggregate of incongruous materials, which have obeyed the will of some man? The granite was reluctant, but his hands were stronger, and it came. Iron was deep in the ground, and well combined with stone, but could not hide from his fires. Wood, lime, stuffs, fruits, gums, were dispersed over the earth and sea, in vain. Here they are, within reach of every man’s day-labour,—what he wants of them. The whole world is the flux of matter over the wires of thought to the poles or points where it would build. The races of men rise out of the ground preoccupied with a thought which rules them, and divided into parties ready armed and angry to fight for this metaphysical abstraction. The quality of the thought differences the Egyptian and the Roman, the Austrian and the American. The men who come on the stage at one period are all found to be related to each other. Certain ideas are in the air. We are all impressionable, for we are made of them; all impressionable, but some more than others, and these first express them. This explains the curious contemporaneousness of inventions and discoveries. The truth is in the air, and the most impressionable brain will announce it first, but all will announce it a few minutes later. So women, as most susceptible, are the best index of the coming hour. So the great man, that is, the man most imbued with the spirit of the time, is the impressionable man,—of a fibre irritable and delicate, like iodine to light. He feels the infinitesimal
attractions. His mind is righter than others, because he yields to a current so feeble as can be felt only by a needle delicately poised.

The correlation is shown in defects. Möller, in his "Essay on Architecture," taught that the building which was fitted accurately to answer its end, would turn out to be beautiful, though beauty had not been intended. I find the like unity in human structures rather virulent and pervasive; that a crudity in the blood will appear in the argument; a hump in the shoulder will appear in the speech and handiwork. If his mind could be seen, the hump would be seen. If a man has a seesaw in his voice, it will run into his sentences, into his poem, into the structure of his fable, into his speculation, into his charity. And, as every man is hunted by his own dæmon, vexed by his own disease, this checks all his activity.

So each man, like each plant, has his parasites. A strong, astringent, bilious nature, has more truculent enemies than the slugs and moths that fret my leaves. Such an one has curculios, borers, knife-worms: a swindler ate him first, then a client, then a quack, then a smooth, plausible gentleman, bitter and selfish as Moloch.

This correlation really existing can be divined. If the threads are there, thought can follow and show them. Especially when a soul is quick and docile; as Chaucer sings—

"Or if the soul of proper kind
Be so perfect as men find,
That it wot what is to come,
And that he warneth all and some,
Of every of their aventures,
By previsions or figures;
But that our flesh hath not might
It to understand aright,
For it is warned too darkly."

Some people are made up of rhyme, coincidence, omen, periodicity, and presage: they meet the person they seek: what their companion prepares to say to them, they first say to him; and a hundred signs apprise them of what is about to befall.

Wonderful intricacy in the web, wonderful constancy in the design, this vagabond life admits. We wonder how the fly finds its mate, and yet year after year we find two men, two women, without legal or carnal tie, spend a great part of their
best time within a few feet of each other. And the moral is, that what we seek we shall find; what we flee from flees from us; as Goethe said, “what we wish for in youth, comes in heaps on us in old age,” too often cursed with the granting of our prayer: and hence the high caution, that, since we are sure of having what we wish, we beware to ask only for high things.

One key, one solution to the mysteries of human condition, one solution to the old knots of fate, freedom, and foreknowledge, exists, the propounding, namely, of the double consciousness. A man must ride alternately on the horses of his private and his public nature, as the equestrians in the circus throw themselves nimbly from horse to horse, or plant one foot on the back of one, and the other foot on the back of the other. So when a man is the victim of his fate, has sciatica in his loins, and cramp in his mind; a club-foot and a club in his wit; a sour face, and a selfish temper; a strut in his gait, and a conceit in his affection; or is ground to powder by the vice of his race; he is to rally on his relation to the universe which his ruin benefits. Leaving the daemon who suffers, he is to take sides with the Deity who secures universal benefit by his pain.

To offset the drag of temperament and race, which pulls down, learn this lesson—namely, that by the cunning co-presence of two elements, which is throughout nature, whatever lames or paralyses you, draws in with it the divinity, in some form, to repay. A good intention clothes itself with sudden power. When a god wishes to ride, any chip or pebble will bud and shoot out winged feet, and serve him for a horse.

Let us build altars to the Blessed Unity which holds nature and souls in perfect solution, and compels every atom to serve an universal end. I do not wonder at a snow-flake, a shell, a summer landscape, or the glory of the stars; but at the necessity of beauty under which the universe lies; that all is and must be pictorial; that the rainbow, and the curve of the horizon, and the arch of the blue vault, are only results from the organism of the eye. There is no need for foolish amateurs to fetch me to admire a garden of flowers, or a sun-gilt cloud, or a waterfall, when I cannot look without seeing splendour and grace. How idle to choose a random sparkle here or there, when the indwelling necessity plants the rose
of beauty on the brow of chaos, and discloses the central intention of nature to be harmony and joy.

Let us build altars to the Beautiful Necessity. If we thought men were free in the sense that in a single exception one fantastical will could prevail over the law of things, it were all one as if a child's hand could pull down the sun. If, in the least particular, one could derange the order of nature, — who would accept the gift of life?

Let us build altars to the Beautiful Necessity, which secures that all is made of one piece; that plaintiff and defendant, friend and enemy, animal and planet, food and eater, are of one kind. In astronomy is vast space, but no foreign system; in geology, vast time, but the same laws as to-day. Why should we be afraid of nature, which is no other than "philosophy and theology embodied?" Why should we fear to be crushed by savage elements, we who are made up of the same elements? Let us build to the Beautiful Necessity, which makes man brave in believing that he cannot shun a danger that is appointed, nor incur one that is not; to the Necessity which rudely or softly educates him to the perception that there are no contingencies; that Law rules throughout existence, a Law which is not intelligent but intelligence,—not personal nor impersonal,—it disdains words and passes understanding; it dissolves persons; it vivifies nature; yet solicits the pure in heart to draw on all its omnipotence.

II.—POWER

His tongue was framed to music,
And his hand was armed with skill;
His face was the mould of beauty,
And his heart the throne of will.

There is not yet any inventory of a man's faculties, any more than a bible of his opinions. Who shall set a limit to the influence of a human being? There are men, who, by their sympathetic attractions, carry nations with them, and lead the activity of the human race. And if there be such a tie, that wherever the mind of man goes, nature will accompany him, perhaps there are men whose magnetisms are of that force to draw material and elemental powers, and, where they
appear, immense instrumentalities organise around them. Life is a search after power; and this is an element with which the world is so saturated,—there is no chink or crevice in which it is not lodged,—that no honest seeking goes unrewarded. A man should prize events and possessions as the ore in which this fine mineral is found; and he can well afford to let events and possessions and the breath of the body go, if their value has been added to him in the shape of power. If he have secured the elixir, he can spare the wide gardens from which it was distilled. A cultivated man, wise to know and bold to perform, is the end to which nature works, and the education of the will is the flowering and result of all this geology and astronomy.

All successful men have agreed in one thing,—they were causationists. They believed that things went not by luck, but by law; that there was not a weak or a cracked link in the chain that joins the first and last of things. A belief in causality, or strict connection between every trifle and the principle of being, and, in consequence, belief in compensation, or, that nothing is got for nothing,—characterises all valuable minds, and must control every effort that is made by an industrious one. The most valiant men are the best believers in the tension of the laws. "All the great captains," said Bonaparte, "have performed vast achievements by conforming with the rules of the art,—by adjusting efforts to obstacles."

The key to the age may be this, or that, or the other, as the young orators describe;—the key to all ages is—Imbecility; imbecility in the vast majority of men, at all times, and, even in heroes, in all but certain eminent moments; victims of gravity, custom, and fear. This gives force to the strong,—that the multitude have no habit of self-reliance or original action.

We must reckon success a constitutional trait. Courage,—the old physicians taught (and their meaning holds, if their physiology is a little mythical),—courage, or the degree of life, is as the degree of circulation of the blood in the arteries. "During passion, anger, fury, trials of strength, wrestling, fighting, a large amount of blood is collected in the arteries, the maintenance of bodily strength requiring it, and but little is sent into the veins. This condition is constant with intrepid persons." Where the arteries hold their blood, is
courage and adventure possible. Where they pour it unrestrained into the veins, the spirit is low and feeble. For performance of great mark, it needs extraordinary health. If Eric is in robust health, and has slept well, and is at the top of his condition, and thirty years old, at his departure from Greenland, he will steer west, and his ships will reach Newfoundland. But take out Eric, and put in a stronger and bolder man,—Biorn or Thorfin,—and the ships will, with just as much ease, sail six hundred, one thousand, fifteen hundred miles further, and reach Labrador and New England. There is no chance in results. With adults, as with children, one class enter cordially into the game, and whirl with the whirling world; the others have cold hands, and remain bystanders; or are only dragged in by the humour and vivacity of those who can carry a dead weight. The first wealth is health. Sickness is poor-spirited, and cannot serve any one: it must husband its resources to live. But health or fulness answers its own ends, and has to spare, runs over and inundates the neighbourhoods and creeks of other men’s necessities.

All power is of one kind, a sharing of the nature of the world. The mind that is parallel with the laws of nature will be in the current of events, and strong with their strength. One man is made of the same stuff of which events are made; is in sympathy with the course of things; can predict it. Whatever befalls, befalls him first; so that he is equal to whatever shall happen. A man who knows men, can talk well on politics, trade, law, war, religion. For, everywhere, men are led in the same manners.

The advantage of a strong pulse is not to be supplied by any labour, art, or concert. It is like the climate, which easily rears a crop, which no glass, or irrigation, or tillage, or manures, can elsewhere rival. It is like the opportunity of a city like New York, or Constantinople, which needs no diplomacy to force capital, or genius, or labour to it. They come of themselves, as the water flows to it. So a broad, healthy, massive understanding seems to lie on the shore of unseen rivers, of unseen oceans, which are covered with barks, that, night and day, are drifted to this point. That is poured into its lap, which other men lie plotting for. It is in everybody’s secret; anticipates everybody’s discovery; and if it do not command every fact of the genius and the scholar, it is
because it is large and sluggish, and does not think them worth the exertion which you do.

This affirmative force is in one, and is not in another, as one horse has the spring in him, and another in the whip. "On the neck of the young man," said Hafiz, "sparkles no gem so gracious as enterprise." Import into any stationary district, as into an old Dutch population in New York or Pennsylvania, or among the planters of Virginia, a colony of hardy Yankees, with seething brains, heads full of steam-hammer, pulley, crank, and toothed wheel,—and everything begins to shine with values. What enhancement to all the water and land in England is the arrival of James Watt or Brunel! In every company, there is not only the active and passive sex, but in both men and women, a deeper and more important sex of mind, namely, the inventive or creative class of both men and women, and the uninnovative or accepting class. Each plus man represents his set, and, if he have the accidental advantage of personal ascendancy,—which implies neither more nor less of talent, but merely the temperamental or taming eye of a soldier or a schoolmaster (which one has, and one has not, as one has a black moustache and one a blonde), then quite easily and without envy or resistance, all his coadjutors and feeders will admit his right to absorb them. The merchant works by book-keeper and cashier; the lawyer's authorities are hunted up by clerks; the geologist reports the surveys of his subalterns; Commander Wilkes appropriates the results of all the naturalists attached to the Expedition; Thoroughwaldsen's statue is finished by stonemasons; Dumas has journeymen; and Shakespeare was theatre-manager, and used the labour of many young men, as well as the playbooks.

There is always room for a man of force, and he makes room for many. Society is a troop of thinkers, and the best heads among them take the best places. A feeble man can see the farms that are fenced and tilled, the houses that are built. The strong man sees the possible houses and farms. His eye makes estates as fast as the sun breeds clouds.

When a new boy comes into school, when a man travels, and encounters strangers every day, or, when into any old club a new-comer is domesticated, that happens which befalls when a strange ox is driven into a pen or pasture where cattle are kept; there is at once a trial of strength between the best pair of horns and the new-comer, and it is settled thenceforth
which is the leader. So now, there is a measuring of strength, very courteous, but decisive, and an acquiescence thence-forward when these two meet. Each reads his fate in the other's eyes. The weaker party finds that none of his information or wit quite fits the occasion. He thought he knew this or that: he finds that he omitted to learn the end of it. Nothing that he knows will quite hit the mark, whilst all the rival's throws are good, and well thrown. But if he knew all the facts in the encyclopædia, it would not help him: for this is an affair of presence of mind, of attitude, of aplomb: the opponent has the sun and wind, and, in every cast, the choice of weapon and mark; and, when he himself is matched with some other antagonist, his own shafts fly well and hit. 'Tis a question of stomach and constitution. The second man is as good as the first,—perhaps better; but has not stoutness or stomach, as the first has, and so his wit seems over-fine or under-fine.

Health is good,—power, life, that resists disease, poison, and all enemies, and is conservative, as well as creative. Here is question, every spring, whether to graft with wax, or whether with clay; whether to whitewash or to potash, or to prune; but the one point is the thrifty tree. A good tree, that agrees with the soil, will grow in spite of blight, or bug, or pruning, or neglect, by night and by day, in all weathers and all treatments. Vivacity, leadership, must be had, and we are not allowed to be nice in choosing. We must fetch the pump with dirty water, if clean cannot be had. If we will make bread, we must have contagion, yeast, emptyings, or what not, to induce fermentation into the dough: as the torpid artist seeks inspiration at any cost, by virtue or by vice, by friend or by fiend, by prayer or by wine. And we have a certain instinct, that where is great amount of life, though gross and peccant, it has its own checks and purifications, and will be found at last in harmony with moral laws.

We watch in children with pathetic interest the degree in which they possess recuperative force. When they are hurt by us, or by each other, or go to the bottom of the class, or miss the annual prizes, or are beaten in the game,—if they lose heart, and remember the mischance in their chamber at home, they have a serious check. But if they have the buoyancy and resistance that pre-occupies them with new
interest in the new moment,—the wounds cicatrise, and the fibre is the tougher for the hurt.

One comes to value this *plus* health, when he sees that all difficulties vanish before it. A timid man listening to the alarmists in Congress, and in the newspapers, and observing the profligacy of party,—sectional interests urged with a fury which shuts its eyes to consequences, with a mind made up to desperate extremities, ballot in one hand, and rifle in the other,—might easily believe that he and his country have seen their best days, and he hardens himself the best he can against the coming ruin. But, after this has been foretold with equal confidence fifty times, and government six per cents. have not declined a quarter of a mill, he discovers that the enormous elements of strength which are here in play make our politics unimportant. Personal power, freedom, and the resources of nature strain every faculty of every citizen. We prosper with such vigour, that, like thrifty trees, which grow in spite of ice, lice, mice, and borers, so we do not suffer from the profligate swarms that fatten on the national treasury. The huge animals nourish huge parasites, and the rancour of the disease attests the strength of the constitution. The same energy in the Greek *Demos* drew the remark, that the evils of popular government appear greater than they are; there is compensation for them in the spirit and energy it awakens. The rough and ready style which belongs to a people of sailors, foresters, farmers, and mechanics, has its advantages. Power educates the potentate. As long as our people quote English standards they dwarf their own proportions. A Western lawyer of eminence said to me, he wished it were a penal offence to bring an English law-book into a court in this country, so pernicious had he found in his experience our deference to English precedent. The very word "commerce" has only an English meaning, and is pinched to the cramp exigencies of English experience. The commerce of rivers, the commerce of railroads, and who knows but the commerce of air-balloons, must add an American extension to the pond-hole of admiralty. As long as our people quote English standards, they will miss the sovereignty of power; but let these rough-riders,—legislators in shirt-sleeves,—Hoosier, Sucker, Wolverine, Badger,—or whatever hard head Arkansas, Oregon, or Utah sends, half orator, half assassin, to represent its wrath and cupidity
at Washington,—let these drive as they may; and the disposition of territories and public lands; the necessity of the balancing and keeping at bay the snarling majorities of German, Irish, and of native millions, will bestow promptness, address, and reason at last on our buffalo-hunter, and authority and majesty of manners. The instinct of the people is right. Men expect from good whigs, put into office by the respectability of the country, much less skill to deal with Mexico, Spain, Britain, or with our own malcontent members, than from some strong transgressor, like Jefferson, or Jackson, who first conquers his own government, and then uses the same genius to conquer the foreigner. The senators who dissented from Mr. Polk's Mexican war, were not those who knew better, but those who, from political position, could afford it; not Webster, but Benton and Calhoun.

This power, to be sure, is not clothed in satin. 'Tis the power of Lynch law, of soldiers and pirates; and it bullies the peaceable and loyal. But it brings its own antidote; and here is my point,—that all kinds of power usually emerge at the same time; good energy, and bad; power of mind, with physical health; the ecstasies of devotion, with the exasperations of debauchery. The same elements are always present, only sometimes these conspicuous, and sometimes those; what was yesterday foreground, being to-day background,—what was surface, playing now a not less effective part as basis. The longer the drought lasts, the more is the atmosphere surcharged with water. The faster the ball falls to the sun, the force to fly off is by so much augmented. And, in morals, wild liberty breeds iron conscience; natures with great impulses have great resources, and return from far. In politics, the sons of democrats will be whigs; whilst red republicanism, in the father, is a spasm of nature to engender an intolerable tyrant in the next age. On the other hand, conservatism, ever more timorous and narrow, disgusts the children, and drives them for a mouthful of fresh air into radicalism.

Those who have most of this coarse energy,—the "bruisers" who have run the gauntlet of caucus and tavern through the county or the state, have their own vices, but they have the good nature of strength and courage. Fierce and unscrupulous, they are usually frank and direct, and above falsehood. Our politics fall into bad hands, and
churchmen and men of refinement, it seems agreed, are not fit persons to send to Congress. Politics is a deleterious profession, like some poisonous handicrafts. Men in power have no opinions, but may be had cheap for any opinion, for any purpose,—and if it be only a question between the most civil and the most forcible, I lean to the last. These Hoosiers and Suckers are really better than the snivelling opposition. Their wrath is at least of a bold and manly cast. They see, against the unanimous declarations of the people, how much crime the people will bear; they proceed from step to step, and they have calculated but too justly upon their Excellencies the New England governors, and upon their Honours the New England legislators. The messages of the governors and the resolutions of the legislatures, are a proverb for expressing a sham virtuous indignation, which, in the course of events, is sure to be belied.

In trade, also, this energy usually carries a trace of ferocity. Philanthropic and religious bodies do not commonly make their executive officers out of saints. The communities hitherto founded by Socialists,—the Jesuits, the Port Royalists, the American communities at New Harmony, at Brook Farm, at Zoar,—are only possible by installing Judas as steward. The rest of the offices may be filled by good burgesses. The pious and charitable proprietor has a foreman not quite so pious and charitable. The most amiable of country gentlemen has a certain pleasure in the teeth of the bull-dog which guards his orchard. Of the Shaker society, it was formerly a sort of proverb in the country, that they always sent the devil to market. And in representations of the Deity, painting, poetry, and popular religion have ever drawn the wrath from Hell. It is an esoteric doctrine of society, that a little wickedness is good to make muscle; as if conscience were not good for hands and legs, as if poor decayed formalists of law and order cannot run like wild goats, wolves, and conies; that, as there is a use in medicine for poisons, so the world cannot move without rogues: that public spirit and the ready hand are as well found among the malignants. 'Tis not very rare, the coincidence of sharp private and political practice with public spirit and good neighbourhood.

I knew a burly Boniface who for many years kept a public-house in one of our rural capitals. He was a knave whom the
town could ill spare. He was a social, vascular creature, grasping and selfish. There was no crime which he did not or could not commit. But he made good friends of the select-
men, served them with his best chop when they supped at his house, and also with his honour the Judge he was very cordial, grasping his hand. He introduced all the fiends, male and female, into the town, and united in his person the functions of bully, incendiary, swindler, barkeeper, and burglar. He girdled the trees, and cut off the horses' tails of the temper-
ance people in the night. He led the "rummies" and radicals in town-meeting with a speech. Meantime, he was civil, fat, and easy, in his house, and precisely the most public-spirited citizen. He was active in getting the roads repaired and planted with shade-trees; he subscribed for the fountains, the gas, and the telegraph; he introduced the new horse-rake, the new scraper, the baby-jumper, and what not, that Connecticut sends to the admiring citizens. He did this the easier, that the pedlar stopped at his house, and paid his keeping, by setting up his new trap on the landlord's premises.

Whilst thus the energy for originating and executing work deforms itself by excess, and so our axe chops off our own fingers,—this evil is not without remedy. All the elements whose aid man calls in, will sometimes become his masters, especially those of most subtle force. Shall he, then, ren-
ounce steam, fire, and electricity, or shall he learn to deal with them? The rule for this whole class of agencies is—all plus is good; only put it in the right place.

Men of this surcharge of arterial blood cannot live on nuts, herb-tea, and elegies; cannot read novels and play whist; cannot satisfy all their wants at the Thursday Lecture, or the Boston Athenaeum. They pine for adventure, and must go to Pike's Peak; had rather die by the hatchet of a Pawnee than sit all day and every day at a counting-room desk. They are made for war, for the sea, for mining, hunting, and clearing; for hair-breadth adventures, huge risks, and the joy of event-
ful living. Some men cannot endure an hour of calm at sea. I remember a poor Malay cook, on board a Liverpool packet, who, when the wind blew a gale, could not contain his joy. "Blow!" he cried, "me do tell you, blow!" Their friends and governors must see that some vent for their explosive complexion is provided. The roisters who are destined for infamy at home, if sent to Mexico, will "cover you with
glory," and come back heroes and generals. There are Oregon, Californias, and Exploring Expeditions enough appertaining to America, to find them in files to know, and in crocodiles to eat. The young English are fine animals, full of blood, and when they have no wars to breathe their riotous valours in, they seek for travels as dangerous as war, diving into maelstroms; swimming Hellesponts; wading up the snowy Himmaleh; hunting lion, rhinoceros, elephant, in South Africa; gipsy ing with Borrow in Spain and Algiers; riding alligators in South America with Waterton; utilising Bedouin, Sheik, and Pacha, with Layard; yachting among the icebergs of Lancaster Sound; peeping into craters on the equator; or running on the creases of Malays in Borneo.

The excess of virility has the same importance in general history as in private and industrial life. Strong race or strong individual rests at last on natural forces, which are best in the savage, who, like the beasts around him, is still in reception of the milk from the teats of nature. Cut off the connection between any of our works and this aboriginal source, and the work is shallow. The people lean on this, and the mob is not quite so bad an argument as we sometimes say, for it has this good side. "March without the people," said a French deputy from the tribune, "and you march into night: their instincts are a finger-pointing of Providence, always turned toward real benefit. But when you espouse an Orleans party, or a Bourbon, or a Montalembert party, or any other but an organic party, though you mean well, you have a personality instead of a principle, which will inevitably drag you into a corner."

The best anecdotes of this force are to be had from savage life, in explorers, soldiers, and buccaneers. But who cares for fallings-out of assassins, and fights of bears, or grindings of icebergs? Physical force has no value where there is nothing else. Snow in snow-banks, fire in volcanoes and solfataras, is cheap. The luxury of ice is in tropical countries and midsummer days. The luxury of fire is to have a little on our hearth: and of electricity, not volleys of the charged cloud, but the manageable stream on the battery wires. So of spirit, or energy; the rests or remains of it in the civil and moral man are worth all the cannibals in the Pacific.

In history, the great moment is, when the savage is just ceasing to be a savage, with all his hairy Pelasgic strength
directed on his opening sense of beauty:—and you have Pericles and Phidias,—not yet passed over into the Corinthian civility. Everything good in nature and the world is in that moment of transition, when the swarthy juices still flow plentifully from nature, but their astringency or acridity is got out by ethics and humanity.

The triumphs of peace have been in some proximity to war. Whilst the hand was still familiar with the sword-hilt, whilst the habits of the camp were still visible in the port and complexion of the gentleman, his intellectual power culminated: the compression and tension of these stern conditions is a training for the finest and softest arts, and can rarely be compensated in tranquil times, except by some analogous vigour drawn from occupations as hardy as war.

We say that success is constitutional; depends on a *plus* condition of mind and body, on power of work, on courage; that it is of main efficacy in carrying on the world, and though rarely found in the right state for an article of commerce, but oftener in the supersaturate or excess, which makes it dangerous and destructive, yet it cannot be spared, and must be had in that form, and absorbents provided to take off its edge.

The affirmative class monopolise the homage of mankind. They originate and execute all the great feats. What a force was coiled up in the skull of Napoleon! Of the sixty thousand men making his army at Eylau, it seems some thirty thousand were thieves and burglars. The men whom, in peaceful communities, we hold if we can, with iron at their legs, in prisons, under the muskets of sentinels, this man dealt with, hand to hand, dragged them to their duty, and won his victories by their bayonets.

This aboriginal might gives a surprising pleasure when it appears under conditions of supreme refinement, as in the proficients in high art. When Michael Angelo was forced to paint the Sistine Chapel in fresco, of which art he knew nothing, he went down into the Pope’s gardens behind the Vatican, and with a shovel dug out ochres, red and yellow, mixed them with glue and water with his own hands, and having, after many trials, at last suited himself, climbed his ladders, and painted away, week after week, month after month, the sibyls and prophets. He surpassed his successors in rough vigour as much as in purity of intellect and refinement. He was not crushed by his one picture left unfinished.
at last. Michael was wont to draw his figures first in skeleton, then to clothe them with flesh, and lastly to drape them. "Ah!" said a brave painter to me thinking on these things, "if a man has failed, you will find he has dreamed instead of working. There is no way to success in our art but to take off your coat, grind paint, and work like a digger on the railroad, all day and every day."

Success goes thus invariably with a certain plus or positive power: an ounce of power must balance an ounce of weight. And, though a man cannot return into his mother's womb, and be born with new amounts of vivacity, yet there are two economies which are the best succedanea which the case admits. The first is, the stopping off decisively our miscellaneous activity, and concentrating our force on one or a few points; as the gardener, by severe pruning, forces the sap of the tree into one or two vigorous limbs, instead of suffering it to spindle into a sheaf of twigs.

"Enlarge not thy destiny," said the oracle: "endeavour not to do more than is given thee in charge." The one prudence in life is concentration; the one evil is dissipation: and it makes no difference whether our dissipations are coarse or fine; property and its cares, friends, and a social habit, or politics, or music, or feasting. Everything is good which takes away one plaything and delusion more, and drives us home to add one stroke of faithful work. Friends, books, pictures, lower duties, talents, flatteries, hopes,—all are distractions which cause oscillations in our giddy balloon and make a good poise and a straight course impossible. You must elect your work; you shall take what your brain can, and drop all the rest. Only so can that amount of vital force accumulate which can make the step from knowing to doing. No matter how much faculty of idle seeing a man has, the step from knowing to doing is rarely taken. "Tis a step out of a chalk circle of imbecility into fruitfulness. Many an artist, lacking this, lacks all: he sees the masculine Angelo or Cellini with despair. He, too, is up to Nature and the First Cause in his thought. But the spasm to collect and swing his whole being into one act he has not. The poet Campbell said, that "a man accustomed to work was equal to any achievement he resolved on, and that, for himself, necessity, not inspiration, was the prompter of his muse."

Concentration is the secret of strength in politics, in war,
in trade, in short, in all management of human affairs. One of the high anecdotes of the world is the reply of Newton to the inquiry "how he had been able to achieve his discoveries?"—"By always intending my mind." Or if you will have a text from politics, take this from Plutarch: "There was in the whole city but one street in which Pericles was ever seen, the street which led to the market-place and the council-house. He declined all invitations to banquets, and all gay assemblies and company. During the whole period of his administration he never dined at the table of a friend." Or if we seek an example from trade,—"I hope," said a good man to Rothschild, "your children are not too fond of money and business: I am sure you would not wish that."—"I am sure I should wish that: I wish them to give mind, soul, heart, and body to business,—that is the way to be happy. It requires a great deal of boldness and a great deal of caution to make a great fortune, and when you have got it, it requires ten times as much wit to keep it. If I were to listen to all the projects proposed to me, I should ruin myself very soon. Stick to one business, young man. Stick to your brewery (he said this to young Buxton), and you will be the great brewer of London. Be brewer, and banker, and merchant, and manufacturer, and you will soon be in the Gazette."

Many men are knowing, many are apprehensive and tenacious, but they do not rush to a decision. But in our flowing affairs a decision must be made,—the best, if you can; but any is better than none. There are twenty ways of going to a point, and one is the shortest; but set out at once on one. A man who has that presence of mind which can bring to him on the instant all he knows, is worth for action a dozen men who know as much, but can only bring it to light slowly. The good Speaker in the House is not the man who knows the theory of parliamentary tactics, but the man who decides off-hand. The good judge is not he who does hair-splitting justice to every allegation, but who, aiming at substantial justice, rules something intelligible for the guidance of suitors. The good lawyer is not the man who has an eye to every side and angle of contingency, and qualifies all his qualifications, but who throws himself on your part so heartily, that he can get you out of a scrape. Dr. Johnson said, in one of his flowing sentences, "Miserable beyond all
names of wretchedness is that unhappy pair who are doomed to reduce beforehand to the principles of abstract reason all the details of each domestic day. There are cases where little can be said, and much must be done."

The second substitute for temperament is drill, the power of use and routine. The hack is a better roadster than the Arab barb. In chemistry, the galvanic stream, slow, but continuous, is equal in power to the electric spark, and is, in our arts, a better agent. So in human action, against the spasm of energy we offset the continuity of drill. We spread the same amount of force over much time, instead of condensing it into a moment. 'Tis the same ounce of gold here in a ball, and there in a leaf. At West Point, Colonel Buford, the chief engineer, pounded with a hammer on the trunnions of a cannon, until he broke them off. He fired a piece of ordnance some hundred times in swift succession, until it burst. Now which stroke broke the trunnion? Every stroke. Which blast burst the piece? Every blast. "Diligence passe sens," Henry VIII. was wont to say, or, great is drill. John Kemble said, that the worst provincial company of actors would go through a play better than the best amateur company. Basil Hall likes to show that the worst regular troops will beat the best volunteers. Practice is nine-tenths. A course of mobs is good practice for orators. All the great speakers were bad speakers at first. Stumping it through England for seven years made Cobden a consummate debater. Stumping it through New England for twice seven trained Wendell Phillips. The way to learn German is, to read the same dozen pages over and over a hundred times, till you know every word and particle in them, and can pronounce and repeat them by heart. No genius can recite a ballad at first reading so well as mediocrity can at the fifteenth or twentieth reading. The rule for hospitality and Irish "help," is, to have the same dinner every day throughout the year. At last, Mrs. O'Shaughnessy learns to cook it to a nicety, the host learns to carve it, and the guests are well served. A humorous friend of mine thinks, that the reason why nature is so perfect in her art, and gets up such inconceivably fine sunsets, is, that she has learnt how, at last, by dint of doing the same thing so very often. Cannot one converse better on a topic on which he has experience, than on one which is new? Men whose
opinion is valued on 'Change, are only such as have a special experience, and off that ground their opinion is not valuable. "More are made good by exercitation than by nature," said Democritus. The friction in nature is so enormous that we cannot spare any power. It is not question to express our thought, to elect our way, but to overcome resistances of the medium and material in everything we do. Hence the use of drill, and the worthlessness of amateurs to cope with practitioners. Six hours every day at the piano, only to give facility of touch; six hours a day at painting, only to give command of the odious materials, oil, ochres, and brushes. The masters say, that they know a master in music only by seeing the pose of the hands on the keys;—so difficult and vital an act is the command of the instrument. To have learned the use of the tools, by thousands of manipulations, to have learned the arts of reckoning, by endless adding and dividing, is the power of the mechanic and the clerk.

I remarked in England, in confirmation of a frequent experience at home, that, in literary circles, the men of trust and consideration, bookmakers, editors, university deans and professors, bishops, too, were by no means men of the largest literary talent, but usually of a low and ordinary intellectual, with a sort of mercantile activity and working talent. Indifferent hacks and mediocrities tower, by pushing their forces to a lucrative point, or by working power, over multitudes of superior men, in Old as in New England.

I have not forgotten that there are sublime considerations which limit the value of talent and superficial success. We can easily overpraise the vulgar hero. There are sources on which we have not drawn. I know what I abstain from. I adjourn what I have to say on this topic to the chapters on Culture and Worship. But this force or spirit, being the means relied on by nature for bringing the work of the day about,—as far as we attach importance to household life, and the prizes of the world, we must respect that. And I hold, that an economy may be applied to it; it is as much a subject of exact law and arithmetic as fluids and gases are; it may be husbanded, or wasted; every man is efficient only as he is a container or vessel of this force, and never was any signal act or achievement in history but by this expenditure. This is not gold, but the gold-maker; not the fame, but the exploit.
If these forces and this husbandry are within reach of our will, and the laws of them can be read, we infer that all success, and all conceivable benefit for man, is also, first or last, within his reach, and has its own sublime economies by which it may be attained. The world is mathematical, and has no casualty in all its vast and flowing curve. Success has no more eccentricity than the gingham and muslin we weave in our mills. I know no more affecting lesson to our busy, plotting New England brains, than to go into one of the factories with which we have lined all the watercourses in the States. A man hardly knows how much he is a machine until he begins to make telegraph, loom, press, and locomotive, in his own image. But in these, he is forced to leave out his follies and hindrances, so that when we go to the mill, the machine is more moral than we. Let a man dare go to a loom, and see if he be equal to it. Let machine confront machine, and see how they come out. The world-mill is more complex than the calico-mill, and the architect stooped less. In the gingham-mill, a broken thread or a shred spoils the web through a piece of a hundred yards, and is traced back to the girl that wove it, and lessens her wages. The stockholder, on being shown this, rubs his hands with delight. Are you so cunning, Mr. Profitloss, and do you expect to swindle your master and employer, in the web you weave? A day is a more magnificent cloth than any muslin, the mechanism that makes it is infinitely cunninger, and you shall not conceal the sleezy, fraudulent, rotten hours you have slipped into the piece, nor fear that any honest thread, or straighter steel, or more inflexible shaft, will not testify in the web.

III.—WEALTH

Who shall tell what did befall,
Far away in time, when once,
Over the lifeless ball,
Hung idle stars and suns?
What god the element obeyed?
Wings of what wind the lichen bore,
Wafting the puny seeds of power,
Which, lodged in rock, the rock abrade?
And well the primal pioneer
As soon as a stranger is introduced into any company, one of the first questions which all wish to have answered is, How does that man get his living? And with reason. He is no whole man until he knows how to earn a blameless livelihood. Society is barbarous until every industrious man can get his living without dishonest customs.

Every man is a consumer, and ought to be a producer. He fails to make his place good in the world unless he not only pays his debt, but also adds something to the common wealth. Nor can he do justice to his genius without making some larger demand on the world than a bare subsistence. He is by constitution expensive, and needs to be rich.
Wealth has its source in applications of the mind to nature, from the rudest strokes of spade and axe up to the last secrets of art. Intimate ties subsist between thought and all production; because a better order is equivalent to vast amounts of brute labour. The forces and the resistances are nature's, but the mind acts in bringing things from where they abound to where they are wanted; in wise combining; in directing the practice of the useful arts, and in the creation of finer values, by fine art, by eloquence, by song, or the reproductions of memory. Wealth is in applications of mind to nature, and the art of getting rich consists not in industry, much less in saving, but in a better order, in timeliness, in being at the right spot. One man has stronger arms, or longer legs; another sees by the course of streams, and growth of markets, where land will be wanted, makes a clearing to the river, goes to sleep, and wakes up rich. Steam is no stronger now than it was a hundred years ago; but is put to better use. A clever fellow was acquainted with the expansive force of steam; he also saw the wealth of wheat and grass rotting in Michigan. Then he cunningly screws on the steam-pipe to the wheat-crop. Puff now, O Steam! The steam puffs and expands as before, but this time it is dragging all Michigan at its back to hungry New York and hungry England. Coal lay in ledges under the ground since the Flood, until a labourer with pick and windlass brings it to the surface. We may well call it black diamonds. Every basket is power and civilisation. For coal is a portable climate. It carries the heat of the tropics to Labrador and the polar circle: and it is the means of transporting itself whithersoever it is wanted. Watt and Stephenson whispered in the ear of mankind their secret, that a half-ounce of coal will draw two tons a mile, and coal carries coal, by rail and by boat, to make Canada as warm as Calcutta, and with its comfort brings its industrial power.

When the farmer's peaches are taken from under the tree, and carried into town, they have a new look, and a hundredfold value over the fruit which grew on the same bough, and lies fulsomely on the ground. The craft of the merchant is this bringing a thing from where it abounds to where it is costly.

Wealth begins in a tight roof that keeps the rain and wind out; in a good pump that yields you plenty of sweet water;
in two suits of clothes, so to change your dress when you are wet; in dry sticks to burn; in a good double-wick lamp; and three meals; in a horse, or a locomotive, to cross the land; in a boat to cross the sea; in tools to work with; in books to read; and so, in giving, on all sides, by tools and auxiliaries, the greatest possible extension to our powers, as if it added feet, and hands, and eyes, and blood, length to the day, and knowledge, and good-will.

Wealth begins with these articles of necessity. And here we must recite the iron law which Nature thunders in these northern climates. First, she requires that each man should feed himself. If, happily, his fathers have left him no inheritance, he must go to work, and by making his wants less, or his gains more, he must draw himself out of that state of pain and insult in which she forces the beggar to lie. She gives him no rest until this is done: she starves, taunts, and torments him, takes away warmth, laughter, sleep, friends, and daylight, until he has fought his way to his own loaf. Then, less peremptorily, but still with sting enough, she urges him to the acquisition of such things as belong to him. Every warehouse and shop-window, every fruit-tree, every thought of every hour, opens a new want to him, which it concerns his power and dignity to gratify. It is of no use to argue the wants down: the philosophers have laid the greatness of man in making his wants few: but will a man content himself with a hut and a handful of dried pease? He is born to be rich. He is thoroughly related; and is tempted out by his appetites and fancies to the conquest of this and that piece of nature, until he finds his well-being in the use of his planet, and of more planets than his own. Wealth requires, besides the crust of bread and the roof,—the freedom of the city, the freedom of the earth, travelling, machinery, the benefits of science, music, and fine arts, the best culture, and the best company. He is the rich man who can avail himself of all men's faculties. He is the richest man who knows how to draw a benefit from the labours of the greatest number of men, of men in distant countries, and in past times. The same correspondence that is between thirst in the stomach, and water in the spring, exists between the whole of man and the whole of nature. The elements offer their service to him. The sea, washing the equator and the poles, offers its perilous aid, and the power and empire that follow it,—day
by day to his craft and audacity. "Beware of me," it says, "but if you can hold me, I am the key to all the lands." Fire offers, on its side, an equal power. Fire, steam, lightning, gravity, ledges of rock, mines of iron, lead, quicksilver, tin, and gold; forests of all woods; fruits of all climates; animals of all habits; the powers of tillage; the fabrics of his chemic laboratory; the webs of his loom; the masculine draught of his locomotive, the talismans of the machine-shop; all grand and subtile things, minerals, gases, ethers, passions, war, trade, government, are his natural playmates, and, according to the excellence of the machinery in each human being, is his attraction for the instruments he is to employ. The world is his tool-chest, and he is successful, or his education is carried on just so far as is the marriage of his faculties with nature, or the degree in which he takes up things into himself.

The strong race is strong on these terms. The Saxons are the merchants of the world; now, for a thousand years, the leading race, and by nothing more than their quality of personal independence, and, in its special modification, pecuniary independence. No reliance for bread and games on the government, no clanship, no patriarchal style of living by the revenues of a chief, no marrying-on,—no system of clientship suits them; but every man must pay his scot. The English are prosperous and peaceable, with their habit of considering that every man must take care of himself, and has himself to thank, if he do not maintain and improve his position in society.

The subject of economy mixes itself with morals, inasmuch as it is a peremptory point of virtue that a man's independence be secured. Poverty demoralises. A man in debt is so far a slave; and Wall Street thinks it easy for a millionaire to be a man of his word, a man of honour, but, that, in failing circumstances, no man can be relied on to keep his integrity. And when one observes in the hotels and palaces of our Atlantic capitals, the habit of expense, the riot of the senses, the absence of bonds, clanship, fellow-feeling of any kind, he feels that, when a man or a woman is driven to the wall, the chances of integrity are frightfully diminished, as if virtue were coming to be a luxury which few could afford, or, as Burke said, "at a market almost too high for humanity." He may fix his inventory of necessities and of enjoyments on
what scale he pleases, but if he wishes the power and privilege
of thought, the chalking out his own career, and having
society on his own terms, he must bring his wants within his
proper power to satisfy.

The manly part is to do with might and main what you can
do. The world is full of fops who never did anything, and
who have persuaded beauties and men of genius to wear their
fop livery, and these will deliver the fop opinion, that it is not
respectable to be seen earning a living; that it is much more
respectable to spend without earning; and this doctrine of the
snake will come also from the elect sons of light; for wise
men are not wise at all hours, and will speak five times from
their taste or their humour to once from their reason. The
brave workman, who might betray his feeling of it in his
manners, if he do not succumb in his practice, must replace
the grace or elegance forfeited by the merit of the work done.
No matter whether he make shoes, or statues, or laws. It is
the privilege of any human work which is well done to invest
the doer with a certain haughtiness. He can well afford not
to conciliate, whose faithful work will answer for him. The
mechanic at his bench carries a quiet heart and assured
manners, and deals on even terms with men of any condition.
The artist has made his picture so true, that it disconcerts
criticism. The statue is so beautiful, that it contracts no
stain from the market, but makes the market a silent gallery
for itself. The case of the young lawyer was pitiful to disgust,
—a paltry matter of buttons or tweezer-cases; but the
determined youth saw in it an aperture to insert his dangerous
wedges, made the insignificance of the thing forgotten, and
gave fame by his sense and energy to the name and affairs of
the Tittleton snuff-box factory.

Society in large towns is babyish, and wealth is made a
toy. The life of pleasure is so ostentatious, that a shallow
observer must believe that this is the agreed best use of
wealth, and whatever is pretended, it ends in cosseting.
But, if this were the main use of surplus capital, it would
bring us to barricades, burned towns, and tomahawks pre-
ently. Men of sense esteem wealth to be the assimilation
of nature to themselves, the converting of the sap and juices
of the planet to the incarnation and nutriment of their
design. Power is what they want,—not candy;—power to
execute their design, power to give legs and feet, form and
actuality, to their thought, which, to a clear-sighted man, appears the end for which the universe exists, and all its resources might be well applied. Columbus thinks that the sphere is a problem for practical navigation, as well as for closet geometry, and looks on all kings and peoples as cowardly landsmen until they dare fit him out. Few men on the planet have more truly belonged to it. But he was forced to leave much of his map blank. His successors inherited his map, and inherited his fury to complete it.

So the men of the mine, telegraph, mill, map, and survey,—the monomaniacs, who talk up their project in marts and offices, and entreat men to subscribe:—how did our factories get built? how did North America get netted with iron rails, except by the importunity of these orators, who dragged all the prudent men in? Is party the madness of many for the gain of a few? This speculative genius is the madness of few for the gain of the world. The projectors are sacrificed, but the public is the gainer. Each of these idealists, working after his thought, would make it tyrannical, if he could. He is met and antagonised by other speculators, as hot as he. The equilibrium is preserved by these counteractions, as one tree keeps down another in the forest, that it may not absorb all the sap in the ground. And the supply in nature of railroad presidents, copper-miners, grand-junctioners, smoke-burners, fire-annihilators, etc., is limited by the same law which keeps the proportion in the supply of carbon, of alum, and of hydrogen.

To be rich is to have a ticket of admission to the masterworks and chief men of each race. It is to have the sea, by voyaging; to visit the mountains, Niagara, the Nile, the desert, Rome, Paris, Constantinople; to see galleries, libraries, arsenals, manufactories. The reader of Humboldt's *Cosmos* follows the marches of a man whose eyes, ears, and mind are armed by all the science, arts, and implements which mankind have anywhere accumulated, and who is using these to add to the stock. So is it with Denon, Beckford, Belzoni, Wilkinson, Layard, Kane, Lepsius, and Livingstone. "The rich man," says Saadi, "is everywhere expected and at home." The rich take up something more of the world into man's life. They include the country as well as the town, the ocean-side, the White Hills, the Far West, and the old European homesteads of man, in their
The world is his, who has
money to go over it. He arrives at the sea-shore, and a
sumptuous ship has floored and carpeted for him the stormy
Atlantic, and made it a luxurious hotel, amid the horrors of
tempests. The Persians say, "'Tis the same to him who
wears a shoe, as if the whole earth were covered with leather."

Kings are said to have long arms, but every man should
have long arms, and should pluck his living, his instruments,
his power, and his knowing, from the sun, moon, and stars.
Is not, then, the demand to be rich legitimate? Yet I have
never seen a rich man. I have never seen a man as rich as
all men ought to be, or with an adequate command of nature.
The pulpit and the press have many common-places denounc-
ing the thirst for wealth; but if men should take these
moralists at their word, and leave off aiming to be rich, the
moralists would rush to rekindle at all hazards this love of
power in the people, lest civilisation should be undone. Men
are urged by their ideas to acquire the command over nature.
Ages derive a culture from the wealth of Roman Caesars,
Leo X.'s, magnificent Kings of France, Grand Dukes of
Tuscany, Dukes of Devonshire, Townleys, Vernons, and
Peels, in England, or whatever great proprietors. It is the
interest of all men that there should be Vaticans and Louvres
full of noble works of art; British Museums, and French
Gardens of Plants, Philadelphia Academies of Natural His-
tory, Bodleian, Ambrosian, Royal, Congressional Libraries.
It is the interest of all that there should be Exploring Expedi-
tions; Captain Cooks to voyage round the world, Rosses,
Franklins, Richardsons, and Kanes, to find the magnetic
and the geographic poles. We are all richer for the measure-
ment of a degree of latitude on the earth's surface. Our
navigation is safer for the chart. How intimately our
knowledge of the system of the universe rests on that!—and
a true economy in a state or an individual will forget its
frugality in behalf of claims like these.

Whilst it is each man's interest that not only ease and
convenience of living, but also wealth of surplus product,
should exist somewhere, it need not be in his hands. Often
it is very undesirable to him. Goethe said well, "Nobody
should be rich but those who understand it." Some men are
born to own, and can animate all their possessions. Others
cannot; their owning is not graceful; seems to be a com-
promise of their character: they seem to steal their own dividends. They should own who can administer; not they who hoard and conceal; not they who, the greater proprietors they are, are only the greater beggars, but they whose work carves out work for more, opens a path for all. For he is the rich man in whom the people are rich, and he is the poor man in whom the people are poor: and how to give all access to the masterpieces of art and nature is the problem of civilisation. The socialism of our day has done good service in setting men on thinking how certain civilising benefits, now only enjoyed by the opulent, can be enjoyed by all. For example, the providing to each man the means and apparatus of science and of the arts. There are many articles good for occasional use, which few men are able to own. Every man wishes to see the ring of Saturn, the satellites and belts of Jupiter and Mars, the mountains and craters in the moon: yet how few can buy a telescope! and of those, scarcely one would like the trouble of keeping it in order, and exhibiting it. So of electrical and chemical apparatus, and many the like things. Every man may have occasion to consult books which he does not care to possess, such as cyclopædias, dictionaries, tables, charts, maps, and public documents: pictures also of birds, beasts, fishes, shells, trees, flowers, whose names he desires to know.

There is a refining influence from the arts of Design on a prepared mind, which is as positive as that of music, and not to be supplied from any other source. But pictures, engravings, statues, and casts, beside their first cost, entail expenses, as of galleries and keepers for the exhibition; and the use which any man can make of them is rare, and their value, too, is much enhanced by the numbers of men who can share their enjoyment. In the Greek cities, it was reckoned profane that any person should pretend a property in a work of art which belonged to all who could behold it. I think sometimes,—could I only have music on my own terms;—could I live in a great city, and know where I could go whenever I wished the ablution and inundation of musical waves,—that were a bath and a medicine.

If properties of this kind were owned by states, towns, and lyceums, they would draw the bonds of neighbourhood closer. A town would exist to an intellectual purpose. In Europe, where the feudal forms secure the permanence of
wealth in certain families, those families buy and preserve these things, and lay them open to the public. But in America, where democratic institutions divide every estate into small portions, after a few years, the public should step into the place of these proprietors and provide this culture and inspiration for the citizen.

Man was born to be rich, or inevitably grows rich by the use of his faculties; by the union of thought with nature. Property is an intellectual production. The game requires coolness, right reasoning, promptness, and patience in the players. Cultivated labour drives out brute labour. An infinite number of shrewd men, in infinite years, have arrived at certain best and shortest ways of doing, and this accumulated skill in arts, cultures, harvestings, curings, manufactures, navigations, exchanges, constitutes the worth of our world to-day.

Commerce is a game of skill, which every man cannot play, which few men can play well. The right merchant is one who has the just average of faculties we call common sense; a man of a strong affinity for facts, who makes up his decision on what he has seen. He is thoroughly persuaded of the truths of arithmetic. There is always a reason in the man for his good or bad fortune, and so in making money. Men talk as if there were some magic about this, and believe in magic in all parts of life. He knows that all goes on the old road, pound for pound, cent. for cent.,—for every effect a perfect cause,—and that good luck is another name for tenacity of purpose. He insures himself in every transaction, and likes small and sure gains. Probity and closeness to the facts are the basis, but the masters of the art add a certain long arithmetic. The problem is, to combine many and remote operations with the accuracy and adherence to the facts, which is easy in near and small transactions; so to arrive at gigantic results, without any compromise of safety. Napoleon was fond of telling the story of the Marseilles banker, who said to his visitor, surprised at the contrast between the splendour of the banker's chateau and hospitality, and the meanness of the counting-room in which he had seen him,—

"Young man, you are too young to understand how masses are formed,—the true and only power,—whether composed of money, water, or men, it is all alike,—a mass is an immense centre of motion, but it must be begun, it must be kept up:"

The Conduct of Life

199
and he might have added, that the way in which it must be begun and kept up is by obedience to the law of particles.

Success consists in close appliance to the laws of the world, and, since those laws are intellectual and moral, an intellectual and moral obedience. Political economy is as good a book wherein to read the life of man, and the ascendency of laws over all private and hostile influences, as any Bible which has come down to us.

Money is representative, and follows the nature and fortunes of the owner. The coin is a delicate meter of civil, social, and moral changes. The farmer is covetous of his dollar, and with reason. It is no waif to him. He knows how many strokes of labour it represents. His bones ache with the days' work that earned it. He knows how much land it represents;—how much rain, frost, and sunshine. He knows that, in the dollar, he gives you so much discretion and patience, so much hoeing and thrashing. Try to lift his dollar; you must lift all that weight. In the city, where money follows the skit of a pen, or a lucky rise in exchange, it comes to be looked on as light. I wish the farmer held it dearer, and would spend it only for real bread, force for force.

The farmer's dollar is heavy, and the clerk's is light and nimble; leaps out of his pocket; jumps on to cards and faro-tables: but still more curious is its susceptibility to metaphysical changes. It is the finest barometer of social storms, and announces revolutions.

Every step of civil advancement makes every man's dollar worth more. In California, the country where it grew,—what would it buy? A few years since, it would buy a shanty, dysentery, hunger, bad company, and crime. There are wide countries like Siberia, where it would buy little else to-day than some petty mitigation of suffering. In Rome, it will buy beauty and magnificence. Forty years ago, a dollar would not buy much in Boston. Now it will buy a great deal more in our old town, thanks to railroads, telegraphs, steamers, and the contemporaneous growth of New York, and the whole country. Yet there are many goods appertaining to a capital city, which are not yet purchasable here, no, not with a mountain of dollars. A dollar in Florida is not worth a dollar in Massachusetts. A dollar is not value, but representative of value, and, at last, of moral values. A dollar is rated for the corn it will buy, or, to speak strictly,
not for the corn or house-room, but for Athenian corn and Roman house-room,—for the wit, probity, and power, which we eat bread and dwell in houses to share and exert. Wealth is mental; wealth is moral. The value of a dollar is, to buy just things: a dollar goes on increasing in value with all the genius and all the virtue of the world. A dollar in a university is worth more than a dollar in a jail; in a temperate, schooled, law-abiding community, than in some sink of crime, where dice, knives, and arsenic are in constant play.

The Bank-note Detector is a useful publication. But the current dollar, silver or paper, is itself the detector of the right and wrong where it circulates. Is it not instantly enhanced by the increase of equity? If a trader refuses to sell his vote, or adheres to some odious right, he makes so much more equity in Massachusetts; and every acre in the State is more worth in the hour of his action. It you take out of State Street the ten honestest merchants, and put in ten roguish persons, controlling the same amount of capital,—the rates of insurance will indicate it; the soundness of banks will show it: the highways will be less secure: the schools will feel it; the children will bring home their little dose of poison: the judge will sit less firmly on the bench, and his decisions be less upright; he has lost so much support and constraint,—which all need; and the pulpit will betray it, in a laxer rule of life. An apple-tree, if you take out every day for a number of days, a load of loam, and put in a load of sand about its roots, will find it out. An apple-tree is a stupid kind of creature, but if this treatment be pursued for a short time, I think it would begin to mistrust something. And if you should take out of the powerful class engaged in trade a hundred good men, and put in a hundred bad, or, what is just the same thing, introduce a demoralising institution, would not the dollar, which is not much stupider than an apple-tree, presently find it out? The value of a dollar is social, as it is created by society. Every man who removes into this city, with any purchasable talent or skill in him, gives to every man’s labour in the city a new worth. If a talent is anywhere born into the world, the community of nations is enriched; and, much more, with a new degree of probity. The expense of crime, one of the principal charges of every nation, is so far stopped. In Europe, crime is observed to increase or abate with the price of bread. If the
Rothschilds at Paris do not accept bills, the people at Manchester, at Paisley, at Birmingham, are forced into the highway, and landlords are shot down in Ireland. The police records attest it. The vibrations are presently felt in New York, New Orleans, and Chicago. Not much otherwise, the economical power touches the masses through the political lords. Rothschild refuses the Russian loan, and there is peace, and the harvests are saved. He takes it, and there is war, and an agitation through a large portion of mankind, with every hideous result, ending in revolution, and a new order.

Wealth brings with it its own checks and balances. The basis of political economy is non-interference. The only safe rule is found in the self-adjusting meter of demand and supply. Do not legislate. Meddle, and you snap the sinews with your sumptuary laws. Give no bounties: make equal laws: secure life and property, and you need not give alms. Open the doors of opportunity to talent and virtue, and they will do themselves justice, and property will not be in bad hands. In a free and just commonwealth, property rushes from the idle and imbecile to the industrious, brave, and persevering.

The laws of nature play through trade, as a toy-battery exhibits the effects of electricity. The level of the sea is not more surely kept, than is the equilibrium of value in society by the demand and supply: and artifice or legislation punishes itself, by reactions, gluts, and bankruptcies. The sublime laws play indifferently through atoms and galaxies. Whoever knows what happens in the getting and spending of a loaf of bread and a pint of beer; that no wishing will change the rigorous limits of pints and penny loaves; that, for all that is consumed, so much less remains in the basket and pot; but what is gone out of these is not wasted, but well spent, if it nourish his body, and enable him to finish his task; —knows all of political economy that the budgets of empires can teach him. The interest of petty economy is this symbolisation of the great economy; the way in which a house, and a private man's methods, tally with the solar system, and the laws of give and take, throughout nature; and, however wary we are of the falsehoods and petty tricks which we suicidally play off on each other, every man has a certain satisfaction, whenever his dealing touches on the inevitable
facts; when he sees that things themselves dictate the price, as they always tend to do, and, in large manufactures, are seen to do. Your paper is not fine or coarse enough,—is too heavy or too thin. The manufacturer says, he will furnish you with just that thickness or thinness you want; the pattern is quite indifferent to him; here is his schedule;—any variety of paper, as cheaper or dearer, with the prices annexed. A pound of paper costs so much, and you may have it made up in any pattern you fancy.

There is in all our dealings a self-regulation that supersedes chaffering. You will rent a house, but must have it cheap. The owner can reduce the rent, but so he incapacitates himself from making proper repairs, and the tenant gets not the house he would have, but a worse one; besides that, a relation a little injurious is established between landlord and tenant. You dismiss your labourer, saying, "Patrick, I shall send for you as soon as I cannot do without you." Patrick goes off contented, for he knows that the weeds will grow with the potatoes, the vines must be planted next week, and, however unwilling you may be, the cantaloupes, crooknecks, and cucumbers will send for him. Who but must wish that all labour and value should stand on the same simple and surly market? If it is the best of its kind it will. We must have joiner, locksmith, planter, priest, poet, doctor, cook, weaver, ostler, each in turn, through the year.

If a St. Michael’s pear sells for a shilling, it costs a shilling to raise it. If, in Boston, the best securities offer twelve per cent. for money, they have just six per cent. of insecurity. You may not see that the fine pear costs you a shilling, but it costs the community so much. The shilling represents the number of enemies the pear has, and the amount of risk in ripening it. The price of coal shows the narrowness of the coal-field, and a compulsory confinement of the miners to a certain district. All salaries are reckoned on contingent as well as on actual services. "If the wind were always south-west by west," said the skipper, "women might take ships to sea." One might say, that all things are of one price; that nothing is cheap or dear; and that the apparent disparities that strike us are only a shopman’s trick of concealing the damage in your bargain. A youth coming into the city from his native New Hampshire farm, with its hard fare still fresh in his remembrance, boards at a first class hotel, and believes
he must somehow have outwitted Dr. Franklin and Malthus, for luxuries are cheap. But he pays for the one convenience of a better dinner by the loss of some of the richest social and educational advantages. He has lost what guards! what incentives! He will perhaps find by-and-by that he left the Muses at the door of the hotel, and found the Furies inside. Money often costs too much, and power and pleasure are not cheap. The ancient poet said, "the gods sell all things at a fair price."

There is an example of the compensations in the commercial history of this country. When the European wars threw the carrying-trade of the world, from 1800 to 1812, into American bottoms, a seizure was now and then made of an American ship. Of course the loss was serious to the owner, but the country was indemnified; for we charged threepence a pound for carrying cotton, sixpence for tobacco, and so on; which paid for the risk and loss, and brought into the country an immense prosperity, early marriages, private wealth, the building of cities and of states: and, after the war was over, we received compensation over and above, by treaty, for all the seizures. Well, the Americans grew rich and great. But the pay-day comes round. Britain, France, and Germany, which our extraordinary profits had impoverished, send out, attracted by the fame of our advantages, first their thousands, then their millions, of poor people to share the crop. At first, we employ them, and increase our prosperity: but, in the artificial system of society and of protected labour, which we also have adopted and enlarged, there come presently checks and stoppages. Then we refuse to employ these poor men. But they will not so be answered. They go into the poor rates, and, though we refuse wages, we must now pay the same amount in the form of taxes. Again, it turns out that the largest proportion of crimes are committed by foreigners. The cost of the crime, and the expense of courts and of prisons, we must bear, and the standing army of preventive police we must pay. The cost of education of the posterity of this great colony I will not compute. But the gross amount of these costs will begin to pay back what we thought was a net gain from our transatlantic customers of 1800. It is vain to refuse this payment. We cannot get rid of these people, and we cannot get rid of their will to be supported. That has become an inevitable element of our
politics; and, for their votes, each of the dominant parties courts and assists them to get it executed. Moreover, we have to pay, not what would have contented them at home, but what they have learned to think necessary here; so that opinion, fancy, and all manner of moral considerations complicate the problem.

There are a few measures of economy which will bear to be named without disgust; for the subject is tender, and we may easily have too much of it; and therein resembles the hideous animalcules of which our bodies are built up,—which, offensive in the particular, yet compose valuable and effective masses. Our nature and genius force us to respect ends, whilst we use means. We must use the means, and yet, in our most accurate using, somehow screen and cloak them, as we can only give them any beauty by a reflection of the glory of the end. That is the good head, which serves the end, and commands the means. The rabble are corrupted by their means: the means are too strong for them, and they desert their end.

1. The first of these measures is that each man's expense must proceed from his character. As long as your genius buys, the investment is safe, though you spend like a monarch. Nature arms each man with some faculty which enables him to do easily some feat impossible to any other, and thus makes him necessary to society. This native determination guides his labour and his spending. He wants an equipment of means and tools proper to his talent. And to save on this point were to neutralise the special strength and helpfulness of each mind. Do your work, respecting the excellence of the work, and not its acceptableness. This is so much economy, that, rightly read, it is the sum of economy. Profligacy consists not in spending years of time or chests of money, but in spending them off the line of your career. The crime which bankrupts men and states is job-work—declining from your main design to serve a turn here or there. Nothing is beneath you, if it is in the direction of your life: nothing is great or desirable, if it is off from that. I think we are entitled here to draw a straight line, and say, that society can never prosper, but must always be bankrupt, until every man does that which he was created to do.

Spend for your expense, and retrench the expense which is
not yours. Allston, the painter, was wont to say, that he
built a plain house, and filled it with plain furniture, because
he would hold out no bribe to any to visit him who had not
similar tastes to his own. We are sympathetic, and, like
children, want everything we see. But it is a large stride to
independence, when a man, in the discovery of his proper
talent, has sunk the necessity for false expenses. As the
betrothed maiden, by one secure affection, is relieved from a
system of slaveries,—the daily inculcated necessity of pleas-
ing all,—so the man who has found what he can do can
spend on that, and leave all other spending. Montaigne said,
"When he was a younger brother, he went brave in dress
and equipage, but afterward his chateau and farms might
answer for him." Let a man who belongs to the class of
nobles—those, namely, who have found out that they can
do something—relieve himself of all vague squandering on
objects not his. Let the realist not mind appearances. Let
him delegate to others the costly courtesies and decorations
of social life. The virtues are economists, but some of the
vices are also. Thus, next to humility, I have noticed that
pride is a pretty good husband. A good pride is, as I reckon
it, worth from five hundred to fifteen hundred a year. Pride
is handsome, economical; pride eradicates so many vices,
letting none subsist but itself; that it seems as if it were a
great gain to exchange vanity for pride. Pride can go
without domestics, without fine clothes—can live in a house
with two rooms, can eat potato, purslain, beans, lyed corn—
can work on the soil, can travel afoot, can talk with poor men,
or sit silent well contented in fine saloons. But vanity costs
money, labour, horses, men, women, health, and peace, and
is still nothing at last, a long way leading nowhere—only one
drawback: proud people are intolerably selfish, and the vain
are gentle and giving.

Art is a jealous mistress, and, if a man have a genius for
painting, poetry, music, architecture, or philosophy, he makes
a bad husband, and an ill provider, and should be wise in
season, and not fetter himself with duties which will embitter
his days, and spoil him for his proper work. We had in this
region, twenty years ago, among our educated men, a sort
of Arcadian fanaticism, a passionate desire to go upon the
land, and unite farming to intellectual pursuits. Many
effected their purpose, and made the experiment, and some
became downright ploughmen; but all were cured of their faith that scholarship and practical farming (I mean with one's own hands) could be united.

With brow bent, with firm intent, the pale scholar leaves his desk to draw a freer breath, and get a juster statement of his thought in the garden walk. He stoops to pull up a purslain, or a dock, that is choking a young corn, and finds there are two: close behind the last is a third; he reaches out his hand to a fourth; behind that are four thousand and one. He is heated and untuned, and, by-and-by, wakes up from his idiot dream of chickweed and red-root, to remember his morning thought, and to find that, with his adamantine purposes, he has been duped by a dandelion. A garden is like those pernicious machineries we read of, every month, in the newspapers, which catch a man's coat-skirt or his hand, and draw in his arm, his leg, and his whole body to irresistible destruction. In an evil hour he pulled down his wall, and added a field to his homestead. No land is bad but land is worse. If a man own land, the land owns him. Now let him leave home, if he dare. Every tree and graft, every hill of melons, row of corn, or quickset hedge, all he has done and all he means to do, stand in his way, like duns, when he would go out of his gate. The devotion to these vines and trees he finds poisonous. Long free walks, a circuit of miles, free his brain, and serve his body. Long marches are no hardship to him. He believes he composes easily on the hills. But this pottering in a few square yards of garden is dispiriting and drivelling. The smell of the plants has drugged him, and robbed him of energy. He finds a cataplepsy in his bones. He grows peevish and poor-spirited. The genius of reading and of gardening are antagonistic, like resinous and vitreous electricity. One is concentrative in sparks and shocks: the other is diffuse strength; so that each disqualifies its workmen for the other's duties.

An engraver whose hands must be of an exquisite delicacy of stroke should not lay stone walls. Sir David Brewster gives exact instructions for microscopic observation:—"Lie down on your back, and hold the single lens and object over your eye," etc. etc. How much more the seeker of abstract truth, who needs periods of isolation, and rapt concentration, and almost a going out of the body to think!

2. Spend after your genius, and by system. Nature goes
by rule, not by sallies and saltations. There must be system in the economies. Saving and unexpensiveness will not keep the most pathetic family from ruin, nor will bigger incomes make free spending safe. The secret of success lies never in the amount of money, but in the relation of income to outgo; as if, after expense has been fixed at a certain point, then new and steady rills of income, though never so small, being added, wealth begins. But in ordinary, as means increase, spending increases faster, so that large incomes, in England and elsewhere, are found not to help matters;—the eating quality of debt does not relax its voracity. When the cholera is in the potato, what is the use of planting larger crops? In England, the richest country in the universe, I was assured by shrewd observers that great lords and ladies had no more guineas to give away than other people; that liberality with money is as rare, and as immediately famous a virtue, as it is here. Want is a growing giant whom the coat of Have was never large enough to cover. I remember in Warwickshire to have been shown a fair manor, still in the same name as in Shakespeare's time. The rent-roll, I was told, is some fourteen thousand pounds a year: but when the second son of the late proprietor was born, the father was perplexed how to provide for him. The eldest son must inherit the manor; what to do with this supernumerary? He was advised to breed him for the Church, and to settle him in the rectorship, which was in the gift of the family; which was done. It is a general rule in that country, that bigger incomes do not help anybody. It is commonly observed, that a sudden wealth, like a prize drawn in a lottery, or a large bequest to a poor family, does not permanently enrich. They have served no apprenticeship to wealth, and, with the rapid wealth, come rapid claims: which they do not know how to deny, and the treasure is quickly dissipated.

A system must be in every economy, or the best single expedients are of no avail. A farm is a good thing when it begins and ends with itself, and does not need a salary, or a shop, to eke it out. Thus, the cattle are a main link in the chain-ring. If the nonconformist or aesthetic farmer leaves out the cattle, and does not also leave out the want which the cattle must supply, he must fill the gap by begging or stealing. When men now alive were born, the farm yielded everything
that was consumed on it. The farm yielded no money, and the farmer got on without. If he fell sick, his neighbours came in to his aid: each gave a day's work; or a half day; or lent his yoke of oxen, or his horse, and kept his work even; hoed his potatoes, mowed his hay, reaped his rye—well knowing that no man could afford to hire labour without selling his land. In autumn, a farmer could sell an ox or a hog, and get a little money to pay taxes withal. Now, the farmer buys almost all he consumes,—tin-ware, cloth, sugar, tea, coffee, fish, coal, railroad tickets, and newspapers.

A master in each art is required, because the practice is never with still or dead subjects, but they change in your hands. You think farm-buildings and broad acres a solid property: but its value is flowing like water. It requires as much watching as if you were decanting wine from a cask. The farmer knows what to do with it, stops every leak, turns all the streamlets to one reservoir, and decants wine: but a blunderhead comes out of Cornhill, tries his hand, and it all leaks away. So is it with granite streets or timber towns- ships as with fruit or flowers. Nor is any investment so permanent, that it can be allowed to remain without incessant watching, as the history of each attempt to lock up an inheritance through two generations for an unborn inheritor may show.

When Mr. Cockayne takes a cottage in the country, and will keep his cow, he thinks a cow is a creature that is fed on hay, and gives a pail of milk twice a day. But the cow that he buys gives milk for three months; then her bag dries up. What to do with a dry cow? who will buy her? Perhaps he bought also a yoke of oxen to do his work; but they get blown and lame. What to do with blown and lame oxen? The farmer fats his, after the spring-work is done, and kills them in the fall. But how can Cockayne, who has no pastures, and leaves his cottage daily in the cars, at business hours, be pothered with fatting and killing oxen? He plants trees; but there must be crops, to keep the trees in ploughed land. What shall be the crops? He will have nothing to do with trees, but will have grass. After a year or two, the grass must be turned up and ploughed: now what crops? Credulous Cockayne!

3. Help comes in the custom of the country, and the rule of *Impera parendo*. The rule is not to dictate, nor to insist
on carrying out each of your schemes by ignorant wilfulness, but to learn practically the secret spoken from all nature, that things themselves refuse to be mismanaged, and will show to the watchful their own law. Nobody need stir hand or foot. The custom of the country will do it all. I know not how to build or to plant; neither how to buy wood, nor what to do with the house-lot, the field, or the wood-lot, when bought. Never fear: it is all settled how it shall be, long beforehand, in the custom of the country, whether to sand or whether to clay it, when to plough and how to dress, whether to grass or to corn; and you cannot help or hinder it. Nature has her own best mode of doing each thing, and she has somewhere told it plainly, if we will keep our eyes and ears open. If not, she will not be slow in undeceiving us, when we prefer our own way to hers. How often we must remember the art of the surgeon, which, in replacing the broken bone, contents itself with releasing the parts from false position; they fly into place by the action of the muscles. On this art of nature all our arts rely.

Of the two eminent engineers in the recent construction of railways in England, Mr. Brunel went straight from terminus to terminus, through mountains, over streams, crossing highways, cutting ducal estates in two, and shooting through this man’s cellar, and that man’s attic window, and so arriving at his end, at great pleasure to geometers, but with cost to his company. Mr. Stephenson, on the contrary, believing that the river knows the way, followed his valley, as implicitly as our Western Railroad follows the Westfield River, and turned out to be the safest and cheapest engineer. We say the cows laid out Boston. Well, there are worse surveyors. Every pedestrian in our pastures has frequent occasion to thank the cows for cutting the best path through the thicket, and over the hills: and travellers and Indians know the value of a buffalo-trail, which is sure to be the easiest possible pass through the ridge.

When a citizen, fresh from Dock Square, or Milk Street, comes out and buys land in the country, his first thought is to a fine outlook from his windows: his library must command a western view: a sunset every day, bathing the shoulder of Blue Hills, Wachusett, and the peaks of Monadnoc and Uncanoonuc. What, thirty acres, and all this magnificence for fifteen hundred dollars! It would be cheap at fifty
thousand. He proceeds at once, his eyes dim with tears of joy, to fix the spot for his corner-stone. But the man who is to level the ground thinks it will take many hundred loads of gravel to fill the hollow to the road. The stonemason who should build the well thinks he shall have to dig forty feet: the baker doubts he shall never like to drive up to the door: the practical neighbour cavils at the position of the barn; and the citizen comes to know that his predecessor the farmer built the house in the right spot for the sun and wind, the spring, and water-drainage, and the convenience to the pasture, the garden, the field, and the road. So Dock Square yields the point, and things have their own way. Use has made the farmer wise, and the foolish citizen learns to take his counsel. From step to step he comes at last to surrender at discretion. The farmer affects to take his orders; but the citizen says, You may ask me as often as you will, and in what ingenious forms, for an opinion concerning the mode of building my wall, or sinking my well, or laying out my acre, but the ball will rebound to you. These are matters on which I neither know, nor need to know anything. These are questions which you and not I shall answer.

Not less, within doors, a system settles itself paramount and tyrannical over master and mistress, servant and child, cousin and acquaintance. 'Tis in vain that genius or virtue or energy of character strive and cry against it. This is fate. And 'tis very well that the poor husband reads in a book of a new way of living, and resolves to adopt it at home: let him go home and try it, if he dare.

4. Another point of economy is to look for seed of the same kind as you sow: and not to hope to buy one kind with another kind. Friendship buys friendship; justice, justice; military merit, military success. Good husbandry finds wife, children, and household. The good merchant large gains, ships, stocks, and money. The good poet fame, and literary credit; but not either the other. Yet there is commonly a confusion of expectations on these points. Hotspur lives for the moment; praises himself for it; and despises Furlong, that he does not. Hotspur, of course, is poor; and Furlong a good provider. The odd circumstance is, that Hotspur thinks it a superiority in himself, this improvidence, which ought to be rewarded with Furlong's lands.

I have not at all completed my design. But we must not
leave the topic, without casting one glance into the interior recesses. It is a doctrine of philosophy, that man is a being of degrees; that there is nothing in the world, which is not repeated in his body; his body being a sort of miniature or summary of the world: then that there is nothing in his body which is not repeated as in a celestial sphere in his mind: then, there is nothing in his brain which is not repeated in a higher sphere in his moral system.

5. Now these things are so in nature. All things ascend, and the royal rule of economy is, that it should ascend also, or, whatever we do must always have a higher aim. Thus it is a maxim, that money is another kind of blood. Pecunia alter sanguis; or, the estate of a man is only a larger kind of body, and admits of regimen analogous to his bodily circulations. So there is no maxim of the merchant, e.g., "Best use of money is to pay debts;" "Every business by itself;" "Best time is present time;" "The right investment is in tools of your trade;" or the like, which does not admit of an extended sense. The counting-room maxims liberally expounded are laws of the universe. The merchant's economy is a coarse symbol of the soul's economy. It is, to spend for power, and not for pleasure. It is to invest income; that is to say, to take up particulars into generals; days into integral eras,—literary, emotive, practical, of its life, and still to ascend in its investment. The merchant has but one rule, absorb and invest: he is to be capitalist: the scraps and filings must be gathered back into the crucible; the gas and smoke must be burned, and earnings must not go to increase expense, but to capital again. Well, the man must be capitalist. Will he spend his income, or will he invest? His body and every organ is under the same law. His body is a jar, in which the liquor of life is stored. Will he spend for pleasure? The way to ruin is short and facile. Will he not spend, but hoard for power? It passes through the sacred fermentations, by that law of Nature whereby everything climbs to higher platforms, and bodily vigour becomes mental and moral vigour. The bread he eats is first strength and animal spirits: it becomes, in higher laboratories, imagery and thought; and in still higher results courage and endurance. This is the right compound interest; this is capital doubled, quadrupled, centupled; man raised to his highest power.

The true thrift is always to spend on the higher plane; to
invest and invest, with keener avarice, that he may spend in spiritual creation, and not in augmenting animal existence. Nor is the man enriched in repeating the old experiments of animal sensation, nor unless through new powers and ascending pleasures he knows himself by the actual experience of higher good, to be already on the way to the highest.

IV.—CULTURE

The word of ambition at the present day is Culture. Whilst all the world is in pursuit of power, and of wealth as a means of power, culture corrects the theory of success. A man is the prisoner of his power. A topical memory makes him an almanac; a talent for debate, a disputant; skill to get money makes him a miser, that is, a beggar. Culture reduces these inflammations by invoking the aid of other powers against the dominant talent, and by appealing to the rank of powers. It watches success. For performance, Nature has no mercy, and sacrifices the performer to get it done; makes a dropsy or a tympany of him. If she wants a thumb, she makes one at the cost of arms and legs, and any excess of power in one part is usually paid for at once by some defect in a contiguous part.

Our efficiency depends so much on our concentration, that Nature usually in the instances where a marked man is sent into the world, overloads him with bias, sacrificing his symmetry to his working powers. It is said, no man can write but one book; and if a man have a defect, it is apt to leave its impression on all his performances. If she creates a policeman like Fouché, he is made up of suspicions and of plots to circumvent them. "The air," said Fouché, "is full of
poniards.” The physician Sanctorius spent his life in a pair of scales, weighing his food. Lord Coke valued Chaucer highly, because the Canon Yeman’s Tale illustrates the statute *Hen. V. Chap. 4*, against alchemy. I saw a man who believed the principal mischiefs in the English state were derived from the devotion to musical concerts. A freemason, not long since, set out to explain to this country that the principal cause of the success of General Washington was the aid he derived from the freemasons.

But worse than the harping on one string, Nature has secured individualism by giving the private person a high conceit of his weight in the system. The pest of society is egotists. There are dull and bright, sacred and profane, coarse and fine egotists. 'Tis a disease that, like influenza, falls on all constitutions. In the distemper known to physicians as chorea, the patient sometimes turns round, and continues to spin slowly on one spot. Is egotism a metaphysical varioloid of this malady? The man runs round a ring formed by his own talent, falls into an admiration of it, and loses relation to the world. It is a tendency in all minds. One of its annoying forms is a craving for sympathy. The sufferers parade their miseries, tear the lint from their bruises, reveal their indictable crimes, that you may pity them. They like sickness, because physical pain will extort some show of interest from the bystanders, as we have seen children, who, finding themselves of no account when grown people come in, will cough till they choke, to draw attention.

This distemper is the scourge of talent, of artists, inventors, and philosophers. Eminent spiritualists shall have an incapacity of putting their act or word aloof from them, and seeing it bravely for the nothing it is. Beware of the man who says, “I am on the eve of a revelation.” It is speedily punished, inasmuch as this habit invites men to humour it, and by treating the patient tenderly, to shut him up in a narrower selfism, and exclude him from the great world of God’s cheerful fallible men and women. Let us rather be insulted, whilst we are insuitable. Religious literature has eminent examples, and if we run over our private list of poets, critics, philanthropists, and philosophers, we shall find them infected with this dropsy and elephantiasis, which we ought to have tapped.

This goitre of egotism is so frequent among notable persons
that we must infer some strong necessity in Nature which it subserves; such as we see in the sexual attraction. The preservation of the species was a point of such necessity, that Nature has secured it at all hazards by immensely overloading the passion, at the risk of perpetual crime and disorder. So egotism has its root in the cardinal necessity by which each individual persists to be what he is.

This individuality is not only not inconsistent with culture, but is the basis of it. Every valuable nature is there in its own right, and the student we speak to must have a mother-wit invincible by his culture, which uses all books, arts, facilities, and elegances of intercourse, but is never subdued and lost in them. He only is a well-made man who has a good determination. And the end of culture is not to destroy this, God forbid! but to train away all impediment and mixture, and leave nothing but pure power. Our student must have a style and determination, and be a master of his own specialty. But, having this, he must put it behind him. He must have a catholicity, a power to see with a free and disengaged look every object. Yet is this private interest and self so over-charged, that, if a man seeks a companion who can look at objects for their own sake, and without affection or self-reference, he will find the fewest who will give him that satisfaction; whilst most men are afflicted with a coldness, an incuriosity, as soon as any object does not connect with their self-love. Though they talk of the object before them, they are thinking of themselves, and their vanity is laying little traps for your admiration.

But after a man has discovered that there are limits to the interest which his private history has for mankind, he still converses with his family, or a few companions,—perhaps with half a dozen personalities that are famous in his neighbourhood. In Boston, the question of life is the names of some eight or ten men. Have you seen Mr. Allston, Doctor Channing, Mr. Adams, Mr. Webster, Mr. Greenough? Have you heard Everett, Garrison, Father Taylor, Theodore Parker? Have you talked with Messieurs Turbinewheel, Summitlevel, and Lecofrupees? Then you may as well die. In New York, the question is of some other eight, or ten, or twenty. Have you seen a few lawyers, merchants, and brokers,—two or three scholars, two or three capitalists, two or three editors of newspapers? New York is a sucked
orange. All conversation is at an end, when we have dis-
charged ourselves of a dozen personalities, domestic or im-
ported, which make up our American existence. Nor do
we expect anybody to be other than a faint copy of these
heroes.

Life is very narrow. Bring any club or company of intelli-
gent men together again after ten years, and if the presence
of some penetrating and calming genius could dispose them
to frankness, what a confession of insanities would come up!
The "causes" to which we have sacrificed, Tariff or Demo-
cracy, Whiggism or Abolition, Temperance or Socialism,
would show like roots of bitterness and dragon of wrath;
and our talents are as mischievous as if each had been seized
upon by some bird of prey, which had whisked him away from
fortune, from truth, from the dear society of the poets, some
zeal, some bias, and only when he was now gry and nerve-
less was it relaxing its claws, and he awaking to sober percep-
tions.

Culture is the suggestion from certain best thoughts, that
a man has a range of affinities, through which he can modulate
the violence of any master-tones that have a droning pre-
ponderance in his scale, and succour him against himself.
Culture redresses his balance, puts him among his equals and
superiors, revives the delicious sense of sympathy, and warns
him of the dangers of solitude and repulsion.

'Tis not a compliment but a disparagement to consult a
man only on horses, or on steam, or on theatres, or on eating,
or on books, and, whenever he appears, considerately to turn
the conversation to the bantling he is known to fondle. In
the Norse heaven of our forefathers, Thors house had five
hundred and forty floors; and man's house has five hundred
and forty floors. His excellence is facility of adaptation and
of transition through many related points, to wide contrasts
and extremes. Culture kills his exaggeration, his conceit of
his village or his city. We must leave our ets at home, when
we go into the street, and meet men on braced grounds of good
meaning and good sense. No performance is worth loss of
geniality. 'Tis a cruel price we pay for certain fancy goods
called fine arts and philosophy. In the Norse legend, Allfadir
did not get a drink of Mimir's spring (the fountain of wisdom)
until he left his eye in pledge. And he is a pedant that
cannot unfold his wrinkles, nor conceal his wrath at interrup-

tion by the best, if their conversation do not fit his impertinency,—here is he to afflict us with his personalities. 'Tis incident to scholars, that each of them fancies he is pointedly odious in his community. Draw him out of this limbo of irritability. Cleanse with healthy blood his parchment skin. You restore to him his eyes which he left in pledge at Mimir's spring. If you are a victim of your doing, who cares what you do? We can spare your opera, your gazetteer, your chemic analysis, your history, your syllogisms. Your man of genius pays dear for his distinction. His head runs up into a spire, and instead of a healthy man, merry and wise, he is some mad dominie. Nature is reckless of the individual. When she has points to carry, she carries them. To wade in marches and sea-margins is the destiny of certain birds, and they are so accurately made for this, that they are imprisoned in those places. Each animal out of its habitat would starve. To the physician, each man, each woman, is an amplification of one organ. A soldier, a locksmith, a bank-clerk, and a dancer, could not exchange functions. And thus we are victims of adaptation.

The antidotes against this organic egotism are, the range and variety of attractions, as gained by acquaintance with the world, with men of merit, with classes of society, with travel, with eminent persons, and with the high resources of philosophy, art, and religion: books, travel, society, solitude. The hardest sceptic who has seen a horse broken, a pointer trained, or who has visited a menagerie, or the exhibition of the Industrious Fleas, will not deny the validity of education. "A boy," says Plato, "is the most vicious of all wild beasts;" and, in the same spirit, the old English poet, Gascoigne, says, "a boy is better unborn than untaught." The city breeds one kind of speech and manners; the back-country a different style; the sea another; the army a fourth. We know that an army which can be confided in, may be formed by discipline; that by systematic discipline all men may be made heroes: Marshal Lannes said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid." A great part of courage is the courage of having done the thing before. And, in all human action, those faculties will be strong which are used. Robert Owen said, "Give me a tiger, and I will educate him." 'Tis inhuman to want faith in the power of education, since to meliorate is
the law of nature; and men are valued precisely as they exert onward or meliorating force. On the other hand, poltroonery is the acknowledging an inferiority to be incurable.

Incacity of melioration is the only mortal distemper. There are people who can never understand a trope, or any second or expanded sense given to your words, or any humour; but remain literalists, after hearing the music, and poetry, and rhetoric, and wit, of seventy or eighty years. They are past the help of surgeon or clergy. But even these can understand pitchforks and the cry of fire; and I have noticed in some of this class a marked dislike of earthquakes.

Let us make our education brave and preventive. Politics is an after-work, a poor patching. We are always a little late. The evil is done, the law is passed, and we begin the up-hill agitation for repeal of that of which we ought to have prevented the enacting. We shall one day learn to supersede politics by education. What we call our root-and-branch reforms of slavery, war, gambling, intemperance, is only medicating the symptoms. We must begin higher up, namely, in Education.

Our arts and tools give to him who can handle them much the same advantage over the novice as if you extended his life ten, fifty, or a hundred years. And I think it the part of good sense to provide every fine soul with such culture, that it shall not, at thirty or forty years, have to say, "This which I might do is made hopeless through my want of weapons."

But it is conceded that much of our training fails of effect; that all success is hazardous and rare; that a large part of our cost and pains is thrown away. Nature takes the matter into her own hands, and, though we must not omit any jot of our system, we can seldom be sure that it has availed much, or that as much good would not have accrued from a different system.

Books, as containing the finest records of human wit, must always enter into our notion of culture. The best heads that ever existed, Pericles, Plato, Julius Cæsar, Shakespeare, Goethe, Milton, were well-read, universally educated men, and quite too wise to undervalue letters. Their opinion has weight, because they had means of knowing the opposite opinion. We look that a great man should be a good reader, or, in proportion to the spontaneous power should be the assimilating power. Good criticism is very rare, and always
precious. I am always happy to meet persons who perceive the transcendent superiority of Shakespeare over all other writers. I like people who like Plato. Because this love does not consist with self-conceit.

But books are good only as far as a boy is ready for them. He sometimes gets ready very slowly. You send your child to the schoolmaster, but 'tis the schoolboys who educate him. You send him to the Latin class, but much of his tuition comes, on his way to school, from the shop-windows. You like the strict rules and the long terms; and he finds his best leading in a by-way of his own, and refuses any companions but of his choosing. He hates the grammer and Gradus, and loves guns, fishing-rods, horses, and boats. Well, the boy is right; and you are not fit to direct his bringing up if your theory leaves out his gymnastic training. Archery, cricket, gun and fishing-rod, horse and boat, are all educators, liberalisers; and so are dancing, dress, and the street-talk; and,—provided only the boy has resources, and is of a noble and ingenuous strain,—these will not serve him less than the books. He learns chess, whist, dancing, and theatricals. The father observes that another boy has learned algebra and geometry in the same time. But the first boy has acquired much more than these poor games along with them. He is infatuated for weeks with whist and chess; but presently will find out, as you did, that when he rises from the game too long played he is vacant and forlorn, and despises himself. Thenceforward it takes place with other things, and has its due weight in his experience. These minor skills and accomplishments—for example, dancing—are tickets of admission to the dress-circle of mankind, and the being master of them enables the youth to judge intelligently of much on which, otherwise, he would give a pedantic squint. Landor said, "I have suffered more from my bad dancing than from all the misfortunes and miseries of my life put together." Provided always the boy is teachable (for we are not proposing to make a statue out of punk), football, cricket, archery, swimming, skating, climbing, fencing, riding, are lessons in the art of power, which it is his main business to learn;—riding, specially, of which Lord Herbert of Cherbury said, "A good rider on a good horse is as much above himself and others as the world can make him." Besides, the gun, fishing-rod, boat,
and horse, constitute, among all who use them, secret free-masonries. They are as if they belonged to one club.

There is also a negative value in these arts. Their chief use to the youth is, not amusement, but to be known for what they are, and not to remain to him occasions of heartburn. We are full of superstitions. Each class fixes its eyes on the advantages it has not; the refined, on rude strength; the democrat, on birth and breeding. One of the benefits of a college education is, to show the boy its little avail. I knew a leading man in a leading city, who, having set his heart on an education at the university, and missed it, could never quite feel himself the equal of his own brothers who had gone thither. His easy superiority to multitudes of professional men could never quite countervail to him this imaginary defect. Balls, riding, wine-parties, and billiards, pass to a poor boy for something fine and romantic, which they are not; and a free admission to them on an equal footing, if it were possible, only once or twice, would be worth ten times its cost, by undeceiving him.

I am not much an advocate for travelling, and I observe that men run away to other countries because they are not good in their own, and run back to their own because they pass for nothing in the new places. For the most part, only the light characters travel. Who are you that have no task to keep you at home? I have been quoted as saying captious things about travel; but I mean to do justice. I think there is a restlessness in our people, which argues want of character. All educated Americans, first or last, go to Europe;—perhaps because it is their mental home, as the invalid habits of this country might suggest. An eminent teacher of girls said, "The idea of a girl's education is, whatever qualifies them for going to Europe." Can we never extract this tape-worm of Europe from the brain of our countrymen? One sees very well what their fate must be. He that does not fill a place at home, cannot abroad. He only goes there to hide his insignificance in a larger crowd. You do not think you will find anything there which you have not seen at home? The stuff of all countries is just the same. Do you suppose there is any country where they do not scald milkpans, and swaddle the infants, and burn the brushwood, and broil the fish? What is true anywhere is true everywhere. And let him go
where he will, he can only find so much beauty or worth as he carries.

Of course, for some men, travel may be useful. Naturalists, discoverers, and sailors are born. Some men are made for couriers, exchangers, envoys, missionaries, bearers of despatches, as others are for farmers and working men. And if the man is of a light and social turn, and nature has aimed to make a legged and winged creature, framed for locomotion, we must follow her hint, and furnish him with that breeding which gives currency, as sedulously as with that which gives worth. But let us not be pedantic, but allow to travel its full effect. The boy grown up on the farm, which he has never left, is said in the country to have had no chance, and boys and men of that condition look upon work on a railroad, or drudgery in a city, as opportunity. Poor country boys of Vermont and Connecticut formerly owed what knowledge they had to their peddling trips to the Southern States. California and the Pacific coast is now the university of this class, as Virginia was in old times. "To have some chance" is their word. And the phrase, "to know the world," or to travel, is synonymous with all men's ideas of advantage and superiority. No doubt, to a man of sense, travel offers advantages. As many languages as he has, as many friends, as many arts and trades, so many times is he a man. A foreign country is a point of comparison wherefrom to judge his own. One use of travel is, to recommend the books and works of home [we go to Europe to be Americanised], and another, to find men. For, as nature has put fruits apart in latitudes, a new fruit in every degree, so knowledge and fine moral quality she lodges in distant men. And thus, of the six or seven teachers whom each man wants among his contemporaries, it often happens that one or two of them live on the other side of the world.

Moreover, there is in every constitution a certain solstice, when the stars stand still in our inward firmament, and when there is required some foreign force, some diversion or alternative to prevent stagnation. And, as a medical remedy, travel seems one of the best. Just as a man witnessing the admirable effect of ether to lull pain, and meditating on the contingencies of wounds, cancers, lockjaws, rejoices in Dr. Jackson's benign discovery, so a man who looks at Paris, at Naples, or at London, says, "If I should be driven from my
own home, here, at least, my thoughts can be consoled by
the most prodigal amusement and occupation which the
human races in ages could contrive and accumulate.”

Akin to the benefit of foreign travel, the aesthetic value of
railroads is to unite the advantages of town and country life,
neither of which we can spare. A man should live in or near
a large town, because, let his own genius be what it may, it
will repel quite as much of agreeable and valuable talent as it
draws, and, in a city, the total attraction of all the citizens is
sure to conquer, first or last, every repulsion, and drag the
most improbable hermit within its walls some day in the year.
In town, he can find the swimming-school, the gymnasium,
the dancing-master, the shooting-gallery, opera, theatre, and
panorama; the chemist’s shop, the museum of natural history;
the gallery of fine arts; the national orators, in their turn;
foreign travellers, the libraries, and his club. In the country
he can find solitude and reading, manly labour, cheap living,
and his old shoes; moors for game, hills for geology, and
groves for devotion. Aubrey writes. “I have heard Thomas
Hobbes say, that, in the Earl of Devon’s house, in Derbyshire,
there was a good library and books enough for him, and his
lordship stored the library with what books he thought fit to
be bought. But the want of good conversation was a very
great inconvenience, and, though he conceived he could order
his thinking as well as another, yet he found a great defect.
In the country, in long time, for want of good conversation,
one’s understanding and invention contract a moss on them,
like an old paling in an orchard.”

Cities give us collision. ’Tis said London and New York
take the nonsense collision out of a man. A great part of our educa-
tion is sympathetic and social. Boys and girls who have
been brought up with well-informed and superior people,
show in their manners an inestimable grace. Fuller says that
“William, Earl of Nassau, won a subject from the King of
Spain every time he put off his hat.” You cannot have one
well-bred man without a whole society of such. They keep
each other up to any high point. Especially women;—it
requires a great many cultivated women,—saloons of bright,
elegant, reading women, accustomed to ease and refinement,
to spectacles, pictures, sculpture, poetry, and to elegant
society, in order that you should have one Madame de Staël.
The head of the commercial house, or a leading lawyer or
The politician, is brought into daily contact with troops of men from all parts of the country, and those too the driving-wheels, the business men of each section, and one can hardly suggest for an apprehensive man a more searching culture. Besides, we must remember the high social possibilities of a million of men. The best bribe which London offers to-day to the imagination is that, in such a vast variety of people and conditions, one can believe there is room for persons of romantic character to exist, and that the poet, the mystic, and the hero may hope to confront their counterparts.

I wish cities could teach their best lesson,—of quiet manners. It is the foible especially of American youth,—pretension. The mark of the man of the world is absence of pretension. He does not make a speech; he takes a low business-tone, avoids all brag, is nobody, dresses plainly, promises not at all, performs much, speaks in monosyllables, hugs his fact. He calls his employment by its lowest name, and so takes from evil tongues their sharpest weapon. His conversation clings to the weather and the news, yet he allows himself to be surprised into thought, and the unlocking of his learning and philosophy. How the imagination is piqued by anecdotes of some great man passing incognito, as a king in grey clothes; of Napoleon affecting a plain suit at his glittering levee; of Burns, or Scott, or Beethoven, or Wellington, or Goethe, or any container of transcendent power, passing for nobody; of Epaminondas, "who never says anything, but will listen eternally;" of Goethe, who preferred trifling subjects and common expressions in intercourse with strangers, worse rather than better clothes, and to appear a little more capricious than he was. There are advantages in the old hat and box-coat. I have heard that throughout this country a certain respect is paid to good broadcloth; but dress makes a little restraint: men will not commit themselves. But the box-coat is like wine; it unlocks the tongue, and men say what they think. An old poet says:

"Go far and go sparing,
For you'll find it certain,
The poorer and baser you appear
The more you'll look through still." ¹

Not much otherwise Milnes writes, in the Lay of the Humble:

"To me men are what they are,
They wear no masks with me."

¹ Beaumont and Fletcher: The Tamer Tamed.
'Tis odd that our people should have—not water on the brain—but a little gas there. A shrewd foreigner said of the Americans, that, "Whatever they say has a little the air of a speech." Yet one of the traits down in the books as distinguishing the Anglo-Saxon, is, a trick of self-disparagement. To be sure, in old, dense countries, among a million of good coats, a fine coat comes to be no distinction, and you find humorists. In an English party, a man with no marked manners or features, with a face like red dough, unexpectedly discloses wit, learning, a wide range of topics, and personal familiarity with good men in all parts of the world, until you think you have fallen upon some illustrious personage. Can it be that the American forest has refreshed some weeds of old Pictish barbarism just ready to die out,—the love of the scarlet feather, of beads, and tinsel? The Italians are fond of red clothes, peacock plumes, and embroidery; and I remember one rainy morning in the city of Palermo, the street was in a blaze with scarlet umbrellas. The English have a plain taste. The equipages of the grandees are plain. A gorgeous livery indicates new and awkward city wealth. Mr. Pitt, like Mr. Pym, thought the title of Mister good against any king in Europe. They have piqued themselves on governing the whole world in the poor, plain, dark Committee-room which the House of Commons sat in before the fire.

Whilst we want cities as the centres where the best things are found, cities degrade us by magnifying trifles. The countryman finds the town a chop-house, a barber's shop. He has lost the lines of grandeur of the horizon, hills and plains, and with them sobriety and elevation. He has come among a supple, glib-tongued tribe, who live for show, servile to public opinion. Life is dragged down to a fracas of pitiful cares and disasters. You say the gods ought to respect a life whose objects are their own; but in cities they have betrayed you to a cloud of insignificant annoyances:

"Mirmidons, race féconde,
Mirmidons,
Enfin nous commandons;
Jupiter livre le monde
Aux mirmidons, aux mirmidons." ¹

¹ Béranger.
"'Tis heavy odds
Against the gods,
When they will match with myrmidons.
We spawning, spawning myrmidons,
Our turn to day! we take command,
Jove gives the globe into the hand
Of myrmidons, of myrmidons."

What is odious but noise, and people who scream and bewail? people whose vane points always east, who live to dine, who send for the doctor, who coddle themselves, who toast their feet on the register, who intrigue to secure a padded chair, and a corner out of the draught? Suffer them once to begin the enumeration of their infirmities, and the sun will go down on the unfinished tale. Let these triflers put us out of conceit with petty comforts. To a man at work, the frost is but a colour: the rain, the wind, he forgot them when he came in. Let us learn to live coarsely, dress plainly, and lie hard. The least habit of dominion over the palate has certain good effects not easily estimated. Neither will we be driven into a quiddling abstemiousness. 'Tis a superstition to insist on a special diet. All is made at last of the same chemical atoms.

A man in pursuit of greatness feels no little wants. How can you mend diet, bed, dress, or salutes or compliments, or the figure you make in company, or wealth, or even the bringing things to pass, when you think how paltry are the machinery and the workers? Wordsworth was praised to me, in Westmoreland, for having afforded to his country neighbours an example of a modest household where comfort and culture were secured, without display. And a tender boy who wears his rusty cap and out-grown coat, that he may secure the coveted place in college, and the right in the library, is educated to some purpose. There is a great deal of self-denial and manliness in poor and middle-class houses, in town, and country, that has not got into literature, and never will, but that keeps the earth sweet; that saves on superfluities, and spends on essentials; that goes rusty, and educates the boy; that sells the horse, but builds the school; works early and late, takes two looms in the factory, three looms, six looms, but pays off the mortgage on the paternal farm, and then goes back cheerfully to work again.

We can ill spare the commanding social benefits of cities; they must be used; yet cautiously, and haughtily,—and
will yield their best values to him who best can do without them. Keep the town for occasions, but the habits should be formed to retirement. Solitude, the safeguard of mediocrity, is to genius the stern friend, the cold, obscure shelter where moults the wings which will bear it farther than suns and stars. He who should inspire and lead his race must be defended from travelling with the souls of other men, from living, breathing, reading, and writing in the daily, time-worn yoke of their opinions. "In the morning, solitude," said Pythagoras; that nature may speak to the imagination, as she does never in company, and that her favourite may make acquaintance with those divine strengths which disclose themselves to serious and abstracted thought. 'Tis very certain that Plato, Plotinus, Archimedes, Hermes, Newton, Milton, Wordsworth, did not live in a crowd, but descended into it from time to time as benefactors: and the wise instructor will press this point of securing to the young soul in the disposition of time and the arrangements of living, periods and habits of solitude. The high advantage of university-life is often the mere mechanical one, I may call it, of a separate chamber and fire,—which parents will allow the boy without hesitation at Cambridge, but do not think needful at home. We say solitude, to mark the character of the tone of thought; but if it can be shared between two or more than two, it is happier, and not less noble. "We four," wrote Neander to his sacred friends, "will enjoy at Halle the inward blessedness of a civitas Dei, whose foundations are for ever friendship. The more I know of you, the more I dissatisfy and must dissatisfy all my wonted companions. Their very presence stupefies me. The common understanding withdraws itself from the one centre of all existence."

Solitude takes off the pressure of present importunities that more catholic and humane relations may appear. The saint and poet seek privacy to ends the most public and universal: and it is the secret of culture to interest the man more in his public than in his private quality. Here is a new poem, which elicits a good many comments in the journals, and in conversation. From these it is easy, at last, to eliminate the verdict which readers passed upon it; and that is, in the main, unfavourable. The poet, as a craftsman, is only interested in the praise accorded to him, and not in the censure, though it be just. And the poor little poet hearkens
only to that, and rejects the censure, as proving incapacity in the critic. But the poet *cultivated* becomes a stockholder in both companies,—say Mr. Curfew,—in the Curfew stock, and in the *humanity* stock; and, in the last, exults as much in the demonstration of the unsoundness of Curfew, as his interest in the former gives him pleasure in the currency of Curfew. For, the depreciation of his Curfew stock only shows the immense values of the humanity stock. As soon as he sides with his critic against himself, with joy, he is a cultivated man.

We must have an intellectual quality in all property and in all action, or they are nought. I must have children, I must have events, I must have a social state and history, or my thinking and speaking want body or basis. But to give these accessories any value, I must know them as contingent and rather showy possessions, which pass for more to the people than to me. We see this abstraction in scholars as a matter of course: but what a charm it adds when observed in practical men. Bonaparte, like Cæsar, was intellectual, and could look at every object for itself, without affection. Though an egotist *à l'outrance*, he could criticise a play, a building, a character, on universal grounds, and give a just opinion. A man known to us only as a celebrity in politics or in trade, gains largely in our esteem if we discover that he has some intellectual taste or skill; as when we learn of Lord Fairfax, the Long Parliament's general, his passion for antiquarian studies; or of the French regicide Carnot, his sublime genius in mathematics; or of a living banker, his success in poetry; or of a partisan journalist, his devotion to ornithology. So, if in travelling in the dreary wilderness of Arkansas or Texas, we should observe on the next seat a man reading Horace, or Martial, or Calderon, we should wish to hug him. In callings that require roughest energy, soldiers, sea-captains, and civil engineers sometimes betray a fine insight, if only through a certain gentleness when off duty: a good-natured admission that there are illusions, and who shall say that he is not their sport? We only vary the phrase, not the doctrine, when we say, that culture opens the sense of beauty. A man is a beggar who only lives to the useful, and, however he may serve as a pin or rivet in the social machine, cannot be said to have arrived at self-possession. I suffer, every day, from the want of perception of beauty in people. They
do not know the charm with which all moments and objects can be embellished, the charm of manners, of self-command, of benevolence. Repose and cheerfulness are the badge of the gentleman,—repose in energy. The Greek battle-pieces are calm; the heroes, in whatever violent actions engaged, retain a serene aspect; as we say of Niagara, that it falls without speed. A cheerful, intelligent face is the end of culture, and success enough. For it indicates the purpose of nature and wisdom attained.

When our higher faculties are in activity, we are domesticated, and awkwardness and discomfort give place to natural and agreeable movements. It is noticed, that the consideration of the great periods and spaces of astronomy induces a dignity of mind, and an indifference to death. The influence of fine scenery, the presence of mountains, appeases our irritations and elevates our friendships. Even a high dome, and the expansive exterior of a cathedral, have a sensible effect on manners. I have heard that stiff people lose something of their awkwardness under high ceilings, and in spacious halls. I think sculpture and painting have an effect to teach us manners and abolish hurry.

But, over all, culture must reinforce from higher influx the empirical skills of eloquence, or of politics, or of trade, and the useful arts. There is a certain loftiness of thought and power to marshal and adjust particulars, which can only come from an insight of their whole connection. The orator who has once seen things in their divine order, will never quite lose sight of this, and will come to affairs as from a higher ground, and, though he will say nothing of philosophy, he will have a certain mastery in dealing with them, and an incapableness of being dazzled or frightened, which will distinguish his handling from that of attorneys and factors. A man who stands on a good footing with the heads of parties at Washington, reads the rumours of the newspapers, and the guesses of provincial politicians with a key to the right and wrong in each statement, and sees well enough where all this will end. Archimedes will look through your Connecticut machine, at a glance, and judge of its fitness. And much more, a wise man who knows not only what Plato, but what Saint John, can show him, can easily raise the affair he deals with to a certain majesty. Plato says, Pericles owed this elevation to the lessons of Anaxagoras. Burke descended
from a higher sphere when he would influence human affairs. Franklin, Adams, Jefferson, Washington, stood on a fine humanity, before which the brawls of modern senates are but pot-house politics.

But there are higher secrets of culture, which are not for the apprentices, but for proficients. These are lessons only for the brave. We must know our friends under ugly masks. The calamities are our friends. Ben Jonson specifies in his address to the Muse:

Get him the time's long grudge, the court's ill-will.
And, reconciled, keep him suspected still,
Make him lose all his friends, and, what is worse,
Almost all ways to any better course;
With me thou leav'st a better Muse than thee,
And which thou brought'st me, blessed Poverty."

We wish to learn philosophy by rote, and play at heroism. But the wiser God says, Take the shame, the poverty, and the penal solitude, that belong to truth-speaking. Try the rough water as well as the smooth. Rough water can teach lessons worth knowing. When the state is unquiet, personal qualities are more than ever decisive. Fear not a revolution which will constrain you to live five years in one. Don't be so tender at making an enemy now and then. Be willing to go to Coventry sometimes, and let the populace bestow on you their coldest contempts. The finished man of the world must eat of every apple once. He must hold his hatreds also at arm's length, and not remember spite. He has neither friends nor enemies, but values men only as channels of power.

He who aims high, must dread an easy home and popular manners. Heaven sometimes hedges a rare character about with ungainliness and odium, as the burr that protects the fruit. If there is any great and good thing in store for you, it will not come at the first or the second call, nor in the shape of fashion, ease, and city drawing-rooms. Popularity is for dolls. "Steep and craggy," said Porphyry, "is the path of the gods." Open your Marcus Antoninus. In the opinion of the ancients, he was the great man who scorned to shine, and who contested the frowns of fortune. They preferred the noble vessel too late for the tide, contending with winds and waves, dismantled and unrigged, to her companion borne into harbour with colours flying and guns firing. There is none of the social goods that may not be purchased too dear,
and mere amiableness must not take rank with high aims and self-subsistency.

Bettine replies to Goethe's mother, who chides her disregard of dress,—"If I cannot do as I have a mind, in our poor Frankfort, I shall not carry things far." And the youth must rate at its true mark the inconceivable levity of local opinion. The longer we live, the more we must endure the elementary existence of men and women; and every brave heart must treat society as a child, and never allow it to dictate.

"All that class of the severe and restrictive virtues," said Burke, "are almost too costly for humanity." Who wishes to be severe? Who wishes to resist the eminent and polite, in behalf of the poor, and low, and impolite? and who that dares do it can keep his temper sweet, his frolic spirits? The high virtues are not debonair, but have their redress in being illustrious at last. What forests of laurel we bring, and the tears of mankind, to those who stood firm against the opinion of their contemporaries! The measure of a master is his success in bringing all men round to his opinion twenty years later.

Let me say here, that culture cannot begin too early. In talking with scholars, I observe that they lost on ruder companions those years of boyhood which alone could give imaginative literature a religious and infinite quality in their esteem. I find, too, that the chance for appreciation is much increased by being the son of an appreciator, and that these boys who now grow up are caught not only years too late, but two or three births too late, to make the best scholars of. And I think it a presentable motive to a scholar that as, in an old community, a well-born proprietor is usually found, after the first heats of youth, to be a careful husband, and to feel a habitual desire that the estate shall suffer no harm by his administration, but shall be delivered down to the next heir in as good condition as he received it;—so, a considerate man will reckon himself a subject of that secular melioration by which mankind is mollified, cured, and refined, and will shun every expenditure of his forces on pleasure or gain, which will jeopardise this social and secular accumulation.

The fossil strata show us that nature began with rudimental forms, and rose to the more complex, as fast as the earth was fit for their dwelling-place; and that the lower
perish, as the higher appear. Very few of our race can be said to be yet finished men. We still carry sticking to us some remains of the preceding inferior quadruped organisation. We call these millions men; but they are not yet men. Half-engaged in the soil, pawing to get free, man needs all the music that can be brought to disengage him. If Love, red Love, with tears and joy; if Want with his scourge; if War with his cannonade; if Christianity with its charity; if Trade with its money; if Art with its portfolios; if Science with her telegraphs through the deeps of space and time—can set his dull nerves throbbing, and, by loud taps on the tough chrysalis, can break its walls, and let the new creature emerge erect and free,—make way, and sing paean! The age of the quadruped is to go out,—the age of the brain and of the heart is to come in. The time will come when the evil forms we have known can no more be organised. Man's culture can spare nothing, wants all the material. He is to convert all impediments into instruments, all enemies into power. The formidable mischief will only make the more useful slave. And if one shall read the future of the race hinted in the organic effort of nature to mount and meliorate, and the corresponding impulse to the better in the human being, we shall dare affirm that there is nothing he will not overcome and convert, until at last culture shall absorb the chaos and gehenna. He will convert the Furies into Muses, and the hells into benefit.
V.—BEHAVIOUR

Grace, Beauty, and Caprice
Build this golden portal;
Graceful women, chosen men,
Dazzle every mortal:
Their sweet and lofty countenance
His enchanting food;
He need not go to them, their forms
Beset his solitude.
He looketh seldom in their face,
His eyes explore the ground,
The green grass is a looking-glass
Whereon their traits are found.
Little he says to them,
So dances his heart in his breast,
Their tranquil mien bereaveth him
Of wit, of words, of rest.
Too weak to win, too fond to shun
The tyrants of his doom,
The much-deceived Endymion
Slips behind a tomb.

The soul which animates nature is not less significantly published in the figure, movement, and gesture of animated bodies, than in its last vehicle of articulate speech. This silent and subtile language is Manners; not what, but how. Life expresses. A statue has no tongue, and needs none. Good tableaux do not need declamation. Nature tells every secret once. Yes, but in man she tells it all the time, by form, attitude, gesture, mien, face, and parts of the face, and by the whole action of the machine. The visible carriage or action of the individual, as resulting from his organisation and his will combined, we call manners. What are they but thought entering the hands and feet, controlling the movements of the body, the speech and behaviour?

There is always a best way of doing everything, if it be to boil an egg. Manners are the happy ways of doing things; each once a stroke of genius or of love,—now repeated and hardened into usage. They form at last a rich varnish, with which the routine of life is washed, and its details adorned. If they are superficial, so are the dew-drops which give such a depth to the morning meadows. Manners are very communicable: men catch them from each other. Consuelo, in the romance, boasts of the lessons she had given the nobles in
manners, on the stage: and, in real life, Talma taught Napoléon the arts of behaviour. Genius invents fine manners, which the baron and the baroness copy very fast, and, by the advantage of a palace, better the instruction. They stereotype the lesson they have learned into a mode.

The power of manners is incessant,—an element as unceaseable as fire. The nobility cannot in any country be disguised, and no more in a republic or a democracy than in a kingdom. No man can resist their influence. There are certain manners which are learned in good society, of that force, that, if a person have them, he or she must be considered, and is everywhere welcome, though without beauty, or wealth, or genius. Give a boy address and accomplishments, and you give him the mastery of palaces and fortunes where he goes. He has not the trouble of earning or owning them; they solicit him to enter and possess. We send girls of a timid, retreating disposition to the boarding-school, to the riding-school, to the ballroom, or wheresoever they can come into acquaintance and nearness of leading persons of their own sex; where they might learn address, and see it near at hand. The power of a woman of fashion to lead, and also to daunt and repel, derives from their belief that she knows resources and behaviours not known to them; but when these have mastered her secret, they learn to confront her, and recover their self-possession.

Every day bears witness to their gentle rule. People who would obtrude, now do not obtrude. The mediocre circle learns to demand that which belongs to a high state of nature or of culture. Your manners are always under examination, and by committees little suspected,—a police in citizens' clothes,—but are awarding or denying you very high prizes when you least think of it.

We talk much of utilities,—but 'tis our manners that associate us. In hours of business, we go to him who knows, or has, or does this or that which we want, and we do not let our taste or feeling stand in the way. But this activity over, we return to the indolent state, and wish for those we can be at ease with; those who will go where we go, whose manners do not offend us, whose social tone chimes with ours. When we reflect on their persuasive and cheering force; how they recommend, prepare, and draw people together; how, in all clubs, manners make the members; how manners make the
fortune of the ambitious youth; that, for the most part, his
manners marry him, and, for the most part, he marries
manners; when we think what keys they are, and to what
secrets; what high lessons and inspiring tokens of character
they convey; and what divination is required in us, for the
reading of this fine telegraph, we see what range the subject
has, and what relations to convenience, power, and beauty.

Their first service is very low,—when they are the minor
morals: but 'tis the beginning of civility,—to make us, I
mean, endurable to each other. We prize them for their
rough-plastic, abestergent force; to get people out of the
quadruped state; to get them washed, clothed, and set up
on end; to slough their animal husks and habits; compel
them to be clean; overawe their spite and meanness, teach
them to stifle the base, and choose the generous expression,
and make them know how much happier the generous
behaviours are.

Bad behaviour the laws cannot reach. Society is invested
with rude, cynical, restless, and frivolous persons who prey
upon the rest, and whom a public opinion concentrated into
good manners, forms accepted by the sense of all, can reach;
—the contradicators and railers at public and private tables,
who are like terriers, who conceive it the duty of a dog of
honour to growl at any passer-by, and do the honours of the
house by barking him out of sight:—I have seen men who
neigh like a horse when you contradict them, or say something
which they do not understand:—then the overbold, who
make their own invitation to your hearth; the persevering
talker, who gives you his society in large, saturating doses;
the pitiers of themselves,—a perilous class; the frivolous
Asmodeus, who relies on you to find him in ropes of sand to
twist; the monotones; in short, every stripe of absurdity;—
these are social inflictions which the magistrate cannot cure
or defend you from, and which must be intrusted to the
restraining force of custom, and proverbs, and familiar rules
of behaviour impressed on young people in their school-days.

In the hotels on the banks of the Mississippi, they print, or
used to print, among the rules of the house, that "No gentle-
man can be permitted to come to the public table without his
coat;" and in the same country, in the pews of the churches,
little placards plead with the worshipper against the fury of
expectoration. Charles Dickens self-sacrificingly undertook
the reformation of our American manners in unspeakable particulars. I think the lesson was not quite lost; that it held bad manners up, so that the churls could see the deformity. Unhappily, the book had its own deformities. It ought not to need to print in a reading room a caution to strangers not to speak loud; nor to persons who look over fine engravings, that they should be handled like cobwebs and butterflies’ wings; nor to persons who look at marble statues, that they shall not smite them with canes. But, even in the perfect civilisation of this city, such cautions are not quite needless in the Athenæum and City Library.

Manners are factitious, and grow out of circumstances as well as out of character. If you look at the pictures of patri- cians and of peasants, of different periods and countries, you will see how well they match the same classes in our towns. The modern aristocrat not only is well drawn in Titian’s Venetian doges, and in Roman coins and statues, but also in the pictures which Commodore Perry brought home of dignitaries in Japan. Broad lands and great interests not only arrive to such heads as can manage them, but form manners of power. A keen eye, too, will see nice gradations of rank, or see in the manners the degree of homage the party is wont to receive. A prince who is accustomed every day to be courted and deferred to by the highest grandees, acquires a corresponding expectation, and a becoming mode of receiving and replying to this homage.

There are always exceptional people and modes. English grandees affect to be farmers. Claverhouse is a fop, and, under the finish of dress, and levity of behaviour, hides the terror of his war. But Nature and Destiny are honest, and never fail to leave their mark, to hang out a sign for each and for every quality. It is much to conquer one’s face, and perhaps the ambitious youth thinks he has got the whole secret when he has learned that disengaged manners are commanding. Don’t be deceived by a facile exterior. Tender men sometimes have strong wills. We had, in Massachusetts, an old statesman, who had sat all his life in courts and in chairs of state, without overcoming an extreme irritability of face, voice, and bearing: when he spoke, his voice would not serve him; it cracked, it broke, it wheezed, it piped;—little cared he; he knew that it had got to pipe, or wheeze, or screech his argument and his indignation.
When he sat down, after speaking, he seemed in a sort of fit, and held on to his chair with both hands: but underneath all this irritability was a puissant will, firm and advancing, and a memory in which lay in order and method, like geologic strata, every fact of his history, and under the control of his will.

Manners are partly factitious, but, mainly, there must be capacity for culture in the blood. Else all culture is vain. The obstinate prejudice in favour of blood, which lies at the base of the feudal and monarchical fabrics of the old world, has some reason in common experience. Every man,—mathematician, artist, soldier, or merchant,—looks with confidence for some traits and talents in his own child, which he would not dare to presume in the child of a stranger. The Orientalists are very orthodox on this point. "Take a thorn-bush," said the emir Abdel-Kader, "and sprinkle it for a whole year with water, it will yield nothing but thorns. Take a date-tree, leave it without culture, and it will always produce dates. Nobility is the date-tree, and the Arab populace is a bush of thorns."

A main fact in the history of manners is the wonderful expressiveness of the human body. If it were made of glass, or of air, and the thoughts were written on steel tablets within, it could not publish more truly its meaning than now. Wise men read very sharply all your private history in your look and gait and behaviour. The whole economy of nature is bent on expression. The tell-tale body is all tongues. Men are like Geneva watches with crystal faces which expose the whole movement. They carry the liquor of life flowing up and down in these beautiful bottles, and announcing to the curious how it is with them. The face and eyes reveal what the spirit is doing, how old it is, what aims it has. The eyes indicate the antiquity of the soul, or through how many forms it has already ascended. It almost violates the proprieties, if we say above the breath here what the confessing eyes do not hesitate to utter to every street passenger.

Man cannot fix his eye on the sun, and so far seems imperfect. In Siberia, a late traveller found men who could see the satellites of Jupiter with their unarmed eye. In some respects the animals excel us. The birds have a longer sight, beside the advantage by their wings of a higher observatory. A cow can bid her calf, by secret signal, prob-
ably of the eye, to run away, or to lie down and hide itself. The jockeys say of certain horses, that "they look over the whole ground." The out-door life, and hunting, and labour, give equal vigour to the human eye. A farmer looks out at you as strong as the horse; his eye-beam is like the stroke of a staff. An eye can threaten like a loaded and levelled gun, or can insult like hissing or kicking; or, in its altered mood, by beams of kindness, it can make the heart dance with joy.

The eye obeys exactly the action of the mind. When a thought strikes us, the eyes fix, and remain gazing at a distance; in enumerating the names of persons or of countries, as France, Germany, Spain, Turkey, the eyes wink at each new name. There is no nicety of learning sought by the mind, which the eyes do not vie in acquiring. "An artist," said Michael Angelo, "must have his measuring tools not in the hand, but in the eye;" and there is no end to the catalogue of its performances, whether in indolent vision (that of health and beauty) or in strained vision (that of art and labour).

Eyes are bold as lions,—roving, running, leaping, here and there, far and near. They speak all languages. They wait for no introduction; they are no Englishmen; ask no leave of age or rank; they respect neither poverty nor riches, neither learning nor power, nor virtue, nor sex, but intrude, and come again, and go through and through you, in a moment of time. What inundation of life and thought is discharged from one soul into another through them! The glance is natural magic. The mysterious communication established across a house between two entire strangers moves all the springs of wonder. The communication by the glance is in the greatest part not subject to the control of the will. It is the bodily symbol of identity of nature. We look into the eyes to know if this other form is another self, and the eyes will not lie, but make a faithful confession what inhabitant is there. The revelations are sometimes terrific. The confession of a low, usurping devil is there made, and the observer shall seem to feel the stirring of owls, and bats, and horned hoofs, where he looked for innocence and simplicity. 'Tis remarkable, too, that the spirit that appears at the windows of the house does at once invest himself in a new form of his own to the mind of the beholder.
The eyes of men converse as much as their tongues, with the advantage, that the ocular dialect needs no dictionary, but is understood all the world over. When the eyes say one thing, and the tongue another, a practised man relies on the language of the first. If the man is off his centre, the eyes show it. You can read in the eyes of your companion, whether your argument hits him, though his tongue will not confess it. There is a look by which a man shows he is going to say a good thing, and a look when he has said it. Vain and forgotten are all the fine offers and offices of hospitality, if there is no holiday in the eye. How many furtive inclinations avowed by the eye, though dissembled by the lips! One comes away from a company, in which, it may easily happen, he has said nothing, and no important remark has been addressed to him, and yet, if in sympathy with the society he shall not have a sense of this fact, such a stream of life has been flowing into him, and out from him, through the eyes. There are eyes, to be sure, that give no more admission into the man than blue-berries. Others are liquid and deep,—wells that a man might fall into;—others are aggressive and devouring, seem to call out the police, take all too much notice, and require crowded Broadways, and the security of millions, to protect individuals against them. The military eye I meet, now darkly sparkling under clerical, now under rustic brows. 'Tis the city of Lacedæmon; 'tis a stack of bayonets. There are asking eyes, asserting eyes, prowling eyes; and eyes full of fate,—some of good, and some of sinister omen. The alleged power to charm down insanity, or ferocity in beasts, is a power behind the eye. It must be a victory achieved in the will before it can be signified in the eye. 'Tis very certain that each man carries in his eye the exact indication of his rank in the immense scale of men, and we are always learning to read it. A complete man should need no auxiliaries to his personal presence. Whoever looked on him would consent to his will, being certified that his aims were generous and universal. The reason why men do not obey us, is because they see the mud at the bottom of our eye.

If the organ of sight is such a vehicle of power, the other features have their own. A man finds room in the few square inches of the face for the traits of all his ancestors; for the expression of all his history, and his wants. The sculptor,
and Winckelmann, and Lavater, will tell you how significant a feature is the nose; how its forms express strength or weakness of will, and good or bad temper. The nose of Julius Cæsar, of Dante, and of Pitt, suggest "the terrors of the beak." What refinement, and what limitations, the teeth betray! "Beware you don't laugh," said the wise mother, "for then you show all your faults."

Balzac left in manuscript a chapter, which he called "Théorie de la démarche," in which he says: "The look, the voice, the respiration, and the attitude or walk, are identical. But, as it has not been given to man, the power to stand guard, at once, over these four different simultaneous expressions of his thought, watch that one which speaks out the truth, and you will know the whole man."

Palaces interest us mainly in the exhibition of manners, which, in the idle and expensive society dwelling in them, are raised to a high art. The maxim of courts is, that manner is power. A calm and resolute bearing, a polished speech, an embellishment of trifles, and the art of hiding all uncomfortable feeling, are essential to the courtier: and Saint Simon, and Cardinal de Retz, and Rœderer, and an encyclopædia of Mémoires, will instruct you, if you wish, in those potent secrets. Thus, it is a point of pride with kings to remember faces and names. It is reported of one prince, that his head had the air of leaning downwards, in order not to humble the crowd. There are people who come in ever like a child with a piece of good news. It was said of the late Lord Holland, that he always came down to breakfast with the air of a man who had just met with some signal good-fortune. In Notre Dame, the grandee took his place on the dais, with the look of one who is thinking of something else. But we must not peep and eavesdrop at palace-doors.

Fine manners need the support of fine manners in others. A scholar may be a well-bred man, or he may not. The enthusiast is introduced to polished scholars in society, and is chilled and silenced by finding himself not in their element. They all have somewhat which he has not, and, it seems, ought to have. But if he finds the scholar apart from his companions, it is then the enthusiast's turn, and the scholar has no defence, but must deal on his terms. Now they must fight the battle out on their private strengths. What is the-
talent of that character so common,—the successful man of the world,—in all marts, senates, and drawing-rooms? Manners: manners of power; sense to see his advantage, and manners up to it. See him approach his man. He knows that troops behave as they are handled at first;—that is his cheap secret; just what happens to every two persons who meet on any affair,—one instantly perceives that he has the key of the situation, that his will comprehends the other's will, as the cat does the mouse; and he has only to use courtesy, and furnish good-natured reasons to his victim to cover up the chain, lest he be shamed into resistance.

The theatre in which this science of manners has a formal importance is not with us a court, but dress-circles, wherein, after the close of the day's business, men and women meet at leisure, for mutual entertainment, in ornamented drawing-rooms. Of course, it has every variety of attraction and merit; but, to earnest persons, to youths or maidens who have great objects at heart, we cannot extol it highly. A well-dressed, talkative company, where each is bent to amuse the other,—yet the high-born Turk who came hither fancied that every woman seemed to be suffering for a chair; that all the talkers were brained and exhausted by the deoxygenated air: it spoiled the best persons: it put all on stilts. Yet here are the secret biographies written and read. The aspect of that man is repulsive; I do not wish to deal with him. The other is irritable, shy, and on his guard. The youth looks humble and manly: I choose him. Look on this woman. There is not beauty, nor brilliant sayings, nor distinguished power, to serve you; but all see her gladly; her whole air and impression are healthful. Here come the sentimentalists, and the invalids. Here is Elise, who caught cold in coming into the world, and has always increased it since. Here are creep-mouse manners, and thievish manners. "Look at Northcote," said Fuseli; "he looks like a rat that has seen a cat." In the shallow company, easily excited, easily tired, here is the columnar Bernard: the Alleghanies do not express more repose than his behaviour. Here are the sweet following eyes of Cecile: it seemed always that she demanded the heart. Nothing can be more excellent in kind than the Corinthian grace of Gertrude's manners, and yet Blanche, who has no manners, has better manners than she; for the movements of Blanche are the sallies of a spirit which is sufficient for the
moment, and she can afford to express every thought by instant action.

Manners have been somewhat cynically defined to be a con-
trivance of wise men to keep fools at a distance. Fashion is
shrewd to detect those who do not belong to her train, and
seldom wastes her attentions. Society is very swift in its
instincts, and, if you do not belong to it, resists and sneers
at you; or quietly drops you. The first weapon enrages the
party attacked; the second is still more effective, but is not
to be resisted, as the date of the transaction is not easily
found. People grow up and grow old under this infliction,
and never suspect the truth, ascribing the solitude which acts
on them very injuriously to any cause but the right one.

The basis of good manners is self-reliance. Necessity is the
law of all who are not self-possessed. Those who are not
self-possessed, obtrude, and pain us. Some men appear to
feel that they belong to a Pariah caste. They fear to offend,
they bend and apologise, and walk through life with a timid
step. As we sometimes dream that we are in a well-dressed
company without any coat, so Godfrey acts ever as if he
suffered from some mortifying circumstance. The hero
should find himself at home, wherever he is; should impart
comfort by his own security and good-nature to all beholders.
The hero is suffered to be himself. A person of strong mind
comes to perceive that for him an immunity is secured so long
as he renders to society that service which is native and proper
to him,—an immunity from all the observances, yea, and
duties, which society so tyrannically imposes on the rank and
file of its members. "Euripides," says Aspasia, "has not
the fine manners of Sophocles; but,"—she adds good-
humouredly, "the movers and masters of our souls have
surely a right to throw out their limbs as carelessly as they
please on the world that belongs to them, and before the
creatures they have animated." 1

Manners require time, as nothing is more vulgar than haste.
Friendship should be surrounded with ceremonies and re-
spects, and not crushed into corners. Friendship requires
more time than poor busy men can usually command. Here
comes to me Roland, with a delicacy of sentiment leading and
inwrapping him like a divine cloud or holy ghost. 'Tis a
great destitution to both that this should not be entertained

1 Landor: Pericles and Aspasia.
with large leisures, but, contrariwise, should be balked by importunate affairs.

But through this lustrous varnish the reality is ever shining. 'Tis hard to keep the what from breaking through this pretty painting of the how. The core will come to the surface. Strong will and keen perception overpower old manners, and create new; and the thought of the present moment has a greater value than all the past. In persons of character, we do not remark manners, because of their instantaneousness. We are surprised by the thing done, out of all power to watch the way of it. Yet nothing is more charming than to recognize the great style which runs through the actions of such. People masquerade before us in their fortunes, titles, offices, and connections, as academic or civil presidents, or senators, or professors, or great lawyers, and impose on the frivolous, and a good deal on each other, by these fames. At least, it is a point of prudent good manners to treat these reputations tenderly, as if they were merited. But the sad realist knows these fellows at a glance, and they know him; as when in Paris the chief of the police enters a ballroom, so many diamonded pretenders shrink and make themselves as inconspicuous as they can, or give him a supplicating look as they pass. "I had received," said a sybil, "I had received at birth the fatal gift of penetration:"—and these Cassandras are always born.

Manners impress as they indicate real power. A man who is sure of his point, carries a broad and contented expression, which everybody reads. And you cannot rightly train one to an air and manner, except by making him the kind of man of whom that manner is the natural expression. Nature for ever puts a premium on reality. What is done for effect, is seen to be done for effect; what is done for love, is felt to be done for love. A man inspires affection and honour, because he was not lying in wait for these. The things of a man for which we visit him, were done in the dark and the cold. A little integrity is better than any career. So deep are the sources of this surface-action, that even the size of your companion seems to vary with his freedom of thought. Not only is he larger, when at ease, and his thoughts generous, but everything around him becomes variable with expression. No carpenter's rule, no rod and chain, will measure the dimensions of any house or house-lot: go into the house:
if the proprietor is constrained and deferring, 'tis of no importance how large his house, how beautiful his grounds,—you quickly come to the end of all; but if the man is self-possessed, happy, and at home, his house is deep-founded, indefinitely large and interesting, the roof and dome buoyant as the sky. Under the humblest roof, the commonest person in plain clothes sits there massive, cheerful, yet formidable, like the Egyptian colossi.

Neither Aristotle, nor Leibnitz, nor Junius, nor Cham-pollion has set down the grammar-rules of this dialect, older than Sanscrit; but they who cannot yet read English, can read this. Men take each other's measure when they meet for the first time,—and every time they meet. How do they get this rapid knowledge, even before they speak, of each other's power and dispositions? One would say, that the persuasion of their speech is not in what they say,—or, that men do not convince by their argument,—but by their personality, by who they are, and what they said and did heretofore. A man already strong is listened to, and everything he says is applauded. Another opposes him with sound argument, but the argument is scouted, until by-and-by it gets into the mind of some weighty person; then it begins to tell on the community.

Self-reliance is the basis of behaviour, as it is the guaranty that the powers are not squandered in too much demonstration. In this country, where school education is universal, we have a superficial culture, and a profusion of reading and writing and expression. We parade our nobilities in poems and orations, instead of working them up into happiness. There is a whisper out of the ages to him who can understand it,—"Whatever is known to thyself alone, has always very great value." There is some reason to believe, that, when a man does not write his poetry, it escapes by other vents through him, instead of the one vent of writing; clings to his form and manners, whilst poets have often nothing poetical about them except their verses. Jacobi said that, "when a man has fully expressed his thought, he has somewhat less possession of it." One would say, the rule is,—What a man is irresistibly urged to say, helps him and us. In explaining his thought to others, he explains it to himself: but when he opens it for show, it corrupts him.

Society is the stage on which manners are shown; novels
are their literature. Novels are the journal or record of manners; and the new importance of these books derives from the fact, that the novelist begins to penetrate the surface, and treats this part of life more worthily. The novels used to be all alike, and had a quite vulgar tone. The novels used to lead us on to a foolish interest in the fortunes of the boy and girl they described. The boy was to be raised from a humble to a high position. He was in want of a wife and a castle, and the object of the story was to supply him with one or both. We watched sympathetically, step by step, his climbing, until, at last, the point is gained, the wedding day is fixed, and we follow the gala procession home to the castle, when the doors are slammed in our face, and the poor reader is left outside in the cold, not enriched by so much as an idea, or a virtuous impulse.

But the victories of character are instant, and victories for all. Its greatness enlarges all. We are fortified by every heroic anecdote. The novels are as useful as Bibles, if they teach you the secret, that the best of life is conversation, and the greatest success is confidence, or perfect understanding between sincere people. 'Tis a French definition of friendship, rien que s'entendre, good understanding. The highest compact we can make with our fellow is,—"Let there be truth between us two for evermore." That is the charm in all good novels, as it is the charm in all good histories, that the heroes mutually understand, from the first, and deal loyally, and with a profound trust in each other. It is sublime to feel and say of another, I need never meet, or speak, or write to him: we need not reinforce ourselves, or send tokens of remembrance: I rely on him as on myself: if he did thus or thus, I know it was right.

In all the superior people I have met, I notice directness, truth spoken more truly, as if everything of obstruction, of malformation, had been trained away. What have they to conceal? What have they to exhibit? Between simple and noble persons, there is always a quick intelligence: they recognise at sight, and meet on a better ground than the talents and skills they may chance to possess, namely, on sincerity and uprightness. For, it is not what talents or genius a man has, but how he is to his talents, that constitutes friendship and character. The man that stands by himself, the universe stands by him also. It is related of the
monk Basle, that, being excommunicated by the Pope, he was, at his death, sent in charge of an angel to find a fit place of suffering in hell; but, such was the eloquence and good-humour of the monk, that, wherever he went, he was received gladly, and civilly treated, even by the most uncivil angels: and, when he came to discourse with them, instead of contradicting or forcing him, they took his part, and adopted his manners: and even good angels came from far to see him, and take up their abode with him. The angel that was sent to find a place of torment for him, attempted to remove him to a worse pit, but with no better success; for such was the contented spirit of the monk, that he found something to praise in every place and company, though in hell, and made a kind of heaven of it. At last the escorting angel returned with his prisoner to them that sent him, saying, that no phlegethon could be found that would burn him; for that, in whatever condition, Basle remained incorrigibly Basle. The legend says, his sentence was remitted, and he was allowed to go into heaven, and was canonised as a saint.

There is a stroke of magnanimity in the correspondence of Bonaparte with his brother Joseph, when the latter was King of Spain, and complained that he missed in Napoleon's letters the affectionate tone which had marked their childish correspondence. "I am sorry," replies Napoleon, "you think you shall find your brother again only in the Elysian Fields. It is natural that at forty he should not feel towards you as he did at twelve. But his feelings towards you have greater truth and strength. His friendship has the features of his mind."

How much we forgive to those who yield us the rare spectacle of heroic manners! We will pardon them the want of books, of arts, and even of the gentler virtues. How tenaciously we remember them! Here is a lesson which I brought along with me in boyhood from the Latin School, and which ranks with the best of Roman anecdotes. Marcus Scaurus was accused by Quintus Varius Hispanus, that he had excited the allies to take arms against the Republic. But he, full of firmness and gravity, defended himself in this manner: "Quintus Varius Hispanus alleges that Marcus Scaurus, President of the Senate, excited the allies to arms: Marcus Scaurus, President of the Senate, denies it. There is no witness. Which do you believe, Romans?" "Utri
When he had said these words, he was absolved by the assembly of the people.

I have seen manners that make a similar impression with personal beauty; that give the like exhilaration, and refine us like that; and, in memorable experiences, they are suddenly better than beauty, and make that superfluous and ugly. But they must be marked by fine perception, the acquaintance with real beauty. They must always show self-control: you shall not be facile, apologetic, or leaky, but king over your word; and every gesture and action shall indicate power at rest. Then they must be inspired by the good heart. There is no beautifier of complexion, or form, or behaviour, like the wish to scatter joy and not pain around us. 'Tis good to give a stranger a meal, or a night's lodging. 'Tis better to be hospitable to his good meaning and thought, and give courage to a companion. We must be as courteous to a man as we are to a picture, which we are willing to give the advantage of a good light. Special precepts are not to be thought of: the talent of well-doing contains them all. Every hour will show a duty as paramount as that of my whim just now; and yet I will write it,—that there is one topic peremptorily forbidden to all well-bred, to all rational mortals, namely, their distempers. If you have not slept, or if you have slept, or if you have headache, or sciatica, or leprosy, or thunder-stroke, I beseech you, by all angels, to hold your peace, and not pollute the morning, to which all the housemates bring serene and pleasant thoughts, by corruption and groans. Come out in the azure. Love the day. Do not leave the sky out of your landscape. The oldest and the most deserving person should come very modestly into any newly awaked company, respecting the divine communications, out of which all must be presumed to have newly come. An old man who added an elevating culture to a large experience of life, said to me, "When you come into the room, I think I will study how to make humanity beautiful to you."

As respects the delicate question of culture, I do not think that any other than negative rules can be laid down. For positive rules, for suggestion, nature alone inspires it. Who dare assume to guide a youth, a maid, to perfect manners?—the golden mean is so delicate, difficult,—say frankly unattainable. What finest hands would not be clumsy to
sketch the genial precepts of the young girl’s demeanour? The chances seem infinite against success; and yet success is continually attained. There must not be secondariness, and ’tis a thousand to one that her air and manner will at once betray that she is not primary, but that there is some other one or many of her class, to whom she habitually postpones herself. But nature lifts her easily, and without knowing it, over these impossibilities, and we are continually surprised with graces and felicities not only unteachable, but undescribable.

VI.—WORSHIP

This is he, who, felled by foes,
Sprung harmless up, refreshed by blows;
He to captivity was sold,
But him no prison-bars would hold:
Though they sealed him in a rock,
Mountain chains he can unlock:
Thrown to lions for their meat,
The crouching lion kissed his feet:
Bound to the stake, no flames appalled,
But arched o’er him an honouring vault.
This is he men miscall Fate,
Threading dark ways, arriving late,
But ever coming in time to crown
The truth, and hurl wrongdoers down.
He is the oldest, and best known,
More near than aught thou call’st thy own,
Yet, greeted in another’s eyes,
Disconcerts with glad surprise—
This is Jove, who, deaf to prayers,
Floods with blessings unawares.
Draw, if thou canst, the mystic line,
Severing rightly his from thine,
Which is human, which divine.

Some of my friends have complained, when the preceding papers were read, that we discussed Fate, Power, and Wealth on too low a platform; gave too much line to the evil spirit of the times; too many cakes to Cerberus; that we ran Cudworth’s risk of making, by excess of candour, the argument of atheism so strong, that he could not answer it. I have no fears of being forced in my own despite to play, as we say, the devil’s attorney. I have no infirmity of faith; no belief that it is of much importance what I or any man may say: I am sure that a certain truth will be said through me, though
I should be dumb, or though I should try to say the reverse. Nor do I fear scepticism for any good soul. A just thinker will allow full swing to his scepticism. I dip my pen in the blackest ink, because I am not afraid of falling into my inkpot. I have no sympathy with a poor man I knew, who, when suicides abounded, told me he dared not look at his razor. We are of different opinions at different hours, but we always may be said to be at heart on the side of truth.

I see not why we should give ourselves such sanctified airs. If the Divine Providence has hid from men neither disease, nor deformity, nor corrupt society, but has stated itself out in passions, in war, in trade, in the love of power and pleasure, in hunger and need, in tyrannies, literatures, and arts,—let us not be so nice that we cannot write these facts down coarsely as they stand, or doubt but there is a counter-statement as ponderous, which we can arrive at, and which, being put, will make all square. The solar system has no anxiety about its reputation, and the credit of truth and honesty is as safe; nor have I any fear that a sceptical bias can be given by leaning hard on the sides of fate, of practical power, or of trade, which the doctrine of Faith cannot down-weigh. The strength of that principle is not measured in ounces and pounds: it tyrannises at the centre of Nature. We may well give scepticism as much line as we can. The spirit will return, and fill us. It drives the drivers. It counterbalances any accumulations of power.

"Heaven kindly gave our blood a moral flow."

We are born loyal. The whole creation is made of hooks and eyes, of bitumen, of sticking-plaster, and whether your community is made in Jerusalem or in California, of saints or of wreckers, it coheres in a perfect ball. Men as naturally make a state, or a church, as caterpillars a web. If they were more refined, it would be less formal, it would be nervous, like that of the Shakers, who, from long habit of thinking and feeling together, it is said, are affected in the same way, at the same time, to work and to play, and as they go with perfect sympathy to their tasks in the field or shop, so are they inclined for a ride or a journey at the same instant, and the horses come up with the family carriage unbespoken to the door.

We are born believing. A man bears beliefs, as a tree bears apples. A self-poise belongs to every particle; and a
rectitude to every mind, and is the Nemesis and protector of
every society. I and my neighbours have been bred in the
notion, that, unless we came soon to some good church,—
Calvinism, or Behmenism, or Romanism, or Mormonism,—
there would be a universal thaw and dissolution. No Isaiah
or Jeremy has arrived. Nothing can exceed the anarchy
that has followed in our skies. The stern old faiths have
all pulverised. 'Tis a whole population of gentlemen and
ladies out in search of religions. 'Tis as flat anarchy in our
ecclesiastic realms, as that which existed in Massachusetts in
the Revolution, or which prevails now on the slope of the
Rocky Mountains or Pike's Peak. Yet we make shift to
live. Men are loyal. Nature has self-poise in all her works;
certain proportions in which oxygen and azote combine, and,
not less a harmony in faculties, a fitness in the spring and
the regulator.

The decline of the influence of Calvin, or Fenélon, or
Wesley, or Channing, need give us no uneasiness. The
builder of heaven has not so ill constructed his creature as
that the religion, that is, the public nature, should fall out:
the public and the private element, like north and south,
like inside and outside, like centrifugal and centripetal, ad-
here to every soul, and cannot be subdued, except the soul
is dissipated. God builds his temple in the heart on the
ruins of churches and religions.

In the last chapters, we treated some particulars of the
question of culture. But the whole state of man is a state
of culture; and its flowering and completion may be de-
scribed as religion, or worship. There is always some
religion, some hope and fear extended into the invisible,—
from the blind boding which nails a horseshoe to the mast or
the threshold, up to the song of the Elders in the Apocalypse.
But the religion cannot rise above the state of the votary.
Heaven always bears some proportion to earth. The god
of the cannibals will be a cannibal, of the crusaders a crusader,
and of the merchants a merchant. In all ages, souls out of
time, extraordinary, prophetic, are born, who are rather
related to the system of the world than to their particular
age and locality. These announce absolute truths, which,
with whatever reverence received, are speedily dragged down
into a savage interpretation. The interior tribes of our
Indians, and some of the Pacific islanders, flog their gods
when things take an unfavourable turn. The Greek poets did not hesitate to let loose their petulant wit on their deities also. Laomedon, in his anger at Neptune and Apollo, who had built Troy for him, and demanded their price, does not hesitate to menace them that he will cut their ears off. Among our Norse forefathers, King Olaf's mode of converting Eyvind to Christianity was to put a pan of glowing coals on his belly, which burst asunder. "Wilt thou now, Eyvind, believe in Christ?" asks Olaf, in excellent faith. Another argument was an adder put into the mouth of the reluctant disciple Rand, who refused to believe.

Christianity, in the romantic ages, signified European culture,—the grafted or meliorated tree in a crab forest. And to marry a pagan wife or husband, was to marry Beast, and voluntarily to take a step backwards towards the baboon.

"Hengist had verament
A daughter both fair and gent,
But she was heathen Sarazine,
And Vortigern for love fine
Her took to fere and to wife,
And was cursed in all his life;
For he let Christian wed heathen,
And mixed our blood as flesh and mathehn." 2

What Gothic mixtures the Christian creed drew from the pagan sources, Richard of Devizes's chronicle of Richard I.'s crusade, in the twelfth century, may show. King Richard taunts God with forsaking him: "O fie! O how unwilling should I be to forsake thee, in so forlorn and dreadful a position, were I thy lord and advocate, as thou art mine. In sooth, my standards will in future be despised, not through my fault, but through thine: in sooth, not through any cowardice of my warfare, art thou thyself, my king and my God conquered, this day, and not Richard thy vassal." The religion of the early English poets is anomalous, so devout and so blasphemous, in the same breath. Such is Chaucer's extraordinary confusion of heaven and earth in the picture of Dido:

"She was so fair,
So young, so lusty, with her eyen glad,
That if that God that heaven and earthe made
Would have a love for beauty and goodness,
And womanhede, truth, and seemliness,
Whom should he loven but this lady sweet?
There n' is no woman to him half so meet."

1 Iliad, Book xxi. l. 455. 2 Moths or worms.
With these grossnesses, we complacently compare our own taste and decorum. We think and speak with more temperance and gradation,—but is not indifferentism as bad as superstition?

We live in a transition period, when the old faiths which comforted nations, and not only so, but made nations, seem to have spent their force. I do not find the religions of men at this moment very creditable to them, but either childish and insignificant, or unmanly and effeminating. The fatal trait is the divorce between religion and morality. Here are know-nothing religions or churches that proscribe intellect; scortatory religions; slave-holding and slave-trading religions; and, even in the decent populations, idolatries wherein the whiteness of the ritual covers scarlet indulgence. The lover of the old religion complains that our contemporaries, scholars as well as merchants, succumb to a great despair,—have corrupted into a timorous conservatism, and believe in nothing. In our large cities, the population is godless, materialised,—no bond, no fellow-feeling, no enthusiasm. These are not men, but hungers, thirsts, fevers, and appetites walking. How is it people manage to live on,—so aimless as they are? After their peppercorn aims are gained, it seems as if the lime in their bones alone held them together, and not any worthy purpose. There is no faith in the intellectual, none in the moral universe. There is faith in chemistry, in meat and wine, in wealth, in machinery, in the steam-engine, galvanic battery, turbine-wheels, sewing machines, and in public opinion, but not in divine causes. A silent revolution has loosed the tension of the old religious sects, and, in place of the gravity and permanence of those societies of opinion, they run into freak and extravagance. In creeds never was such levity; witness the heathenisms in Christianity, the periodic "revivals," the Millenium mathematics, the peacock ritualism, the retrogression to Popery, the maundering of Mormons, the squalor of Mesmerism, the deliration of rappings, the rat and mouse revelation, thumps in table-drawers, and black art. The architecture, the music, the prayer, partake of the madness; the arts sink into shift and make-believe. Not knowing what to do, we ape our ancestors; the churches stagger backward to the mummeries of the dark ages. By the irresistible maturing of the general mind, the Christian traditions have lost their hold. The dogma of
the mystic offices of Christ being dropped, and he standing on his genius as a moral teacher, 'tis impossible to maintain the whole emphasis of his personality; and it recedes, as all persons must, before the sublimity of the moral laws. From this change, and in the momentary absence of any religious genius that could offset the immense material activity, there is a feeling that religion is gone. When Paul Leroux offered his article "Dieu" to the conductor of a leading French journal, he replied, "La question de Dieu manque d'actualité." In Italy, Mr. Gladstone said of the late King of Naples, "it has been a proverb, that he has erected the negation of God into a system of government." In this country, the like stupefaction was in the air, and the phrase "higher law" became a political jibe. What proof of infidelity like the toleration and propagandism of slavery? What like the direction of education? What like the facility of conversion? What like the externality of churches that once sucked the roots of right and wrong, and now have perished away till they are a speck of whitewash on the wall? What proof of scepticism like the base rate at which the highest mental and moral gifts are held? Let a man attain the highest and broadest culture that any American has possessed, then let him die by sea-storm, railroad collision, or other accident, and all America will acquiesce that the best thing has happened to him; that, after the education has gone far, such is the expensiveness of America, that the best use to put a fine person to is, to drown him to save his board.

Another scar of this scepticism is the distrust in human virtue. It is believed by well-dressed proprietors that there is no more virtue than they possess; that the solid portion of society exists for the arts of comfort; that life is an affair to put somewhat between the upper and lower mandibles. How prompt the suggestion of a low motive! Certain patriots in England devoted themselves for years to creating a public opinion that should break down the corn-laws and establish free trade. "Well," says the man in the street, "Cobden got a stipend out of it." Kossuth fled hither across the ocean to try if he could rouse the New World to a sympathy with European liberty. "Aye," says New York, "he made a handsome thing of it—enough to make him comfortable for life."

See what allowance vice finds in the respectable and well-
conditioned class. If a pickpocket intrude into the society of gentlemen, they exert what moral force they have, and he finds himself uncomfortable, and glad to get away. But if an adventurer go through all the forms, procure himself to be elected to a post of trust, as of senator, or president,—though by the same arts as we detest in the house-thief,—the same gentlemen who agree to discountenance the private rogue will be forward to show civilities and marks of respect to the public one: and no amount of evidence of his crimes will prevent them giving him ovations, complimentary dinners, opening their own houses to him, and priding themselves on his acquaintance. We were not deceived by the professions of the private adventurer,—the louder he talked of his honour the faster we counted our spoons; but we appeal to the sanctified preamble of the messages and proclamations of the public sinner, as the proof of sincerity. It must be that they who pay this homage have said to themselves, On the whole, we don’t know about this that you call honesty; a bird in the hand is better.

Even well-disposed, good sort of people are touched with the same infidelity, and for brave, straightforward action use half-measures and compromises. Forgetful that a little measure is a great error, forgetful that a wise mechanic uses a sharp tool, they go on choosing the dead men of routine. But the official men can in nowise help you in any question of to-day, they deriving entirely from the old dead things. Only those can help in counsel or conduct who did not make a party pledge to defend this or that, but who were appointed by God Almighty, before they came into the world, to stand for this which they uphold.

It has been charged that a want of sincerity in the leading men is a vice general throughout American society. But the multitude of the sick shall not make us deny the existence of health. In spite of our imbecility and terrors, and "universal decay of religion," etc. etc., the moral sense reappears to-day with the same morning newness that has been from of old the fountain of beauty and strength. You say, there is no religion now. 'Tis like saying in rainy weather, there is no sun, when at that moment we are witnessing one of his superlative effects. The religion of the cultivated class now, to be sure, consists in an avoidance of acts and engagements which it was once their religion to assume. But this
avoidance will yield spontaneous forms in their due hour. There is a principle which is the basis of things, which all speech aims to say, and all action to evolve, a simple, quiet, undescribed, undescribable presence, dwelling very peacefully in us, our rightful lord: we are not to do, but to let do; not to work, but to be worked upon; and to this homage there is a consent of all thoughtful and just men in all ages and conditions. To this sentiment belong vast and sudden enlargements of power. 'Tis remarkable that our faith in ecstasy consists with total inexperience of it. It is the order of the world to educate with accuracy the senses and the understanding; and the enginery at work to draw out these powers in priority, no doubt, has its office. But we are never without a hint that these powers are mediate and servile, and that we are one day to deal with real being,—essences with essences. Even the fury of material activity has some results friendly to moral health. The energetic action of the times develops individualism, and the religious appear isolated. I esteem this a step in the right direction. Heaven deals with us on no representative system. Souls are not saved in bundles. The Spirit saith to the man, "How is it with thee? thee personally? is it well? is it ill?" For a great nature, it is a happiness to escape a religious training,—religion of character is so apt to be invaded. Religion must always be a crab fruit; it cannot be grafted and keep its wild beauty. "I have seen," said a traveller who had known the extremes of society, "I have seen human nature in all its forms; it is everywhere the same; but the wilder it is, the more virtuous."

We say, the old forms of religion decay, and that a scepticism devastates the community. I do not think it can be cured or stayed by any modification of theologic creeds, much less by theologic discipline. The cure for false theology is mother-wit. Forget your books and traditions, and obey your moral perceptions at this hour. That which is signified by the words "moral" and "spiritual," is a lasting essence, and, with whatever illusions we have loaded them, will certainly bring back the words, age after age, to their ancient meaning. I know no words that mean so much. In our definitions, we grope after the spiritual by describing it as invisible. The true meaning of spiritual is real; that law which executes itself, which works without means, and which
cannot be conceived as not existing. Men talk of "mere morality,"—which is much as if one should say, "Poor God, with nobody to help him." I find the omnipresence and the almightiness in the reaction of every atom in nature. I can best indicate by examples those reactions by which every part of nature replies to the purpose of the actor beneficently to the good, penally to the bad. Let us replace sentimentalism by realism, and dare to uncover those simple and terrible laws which, be they seen or unseen, pervade and govern.

Every man takes care that his neighbour shall not cheat him. But a day comes when he begins to care that he do not cheat his neighbour. Then all goes well. He has changed his market-cart into a chariot of the sun. What a day dawns, when we have taken to heart the doctrine of faith! to prefer, as a better investment, being to doing; being to seeming; logic to rhythm and to display; the year to the day; the life to the year; character to performance; —and have come to know that justice will be done us; and, if our genius is slow, the term will be long.

'Tis certain that worship stands in some commanding relation to the health of man, and to his highest powers, so as to be, in some manner, the source of intellect. All the great ages have been ages of belief. I mean, when there was any extraordinary power of performance, when great national movements began, when arts appeared, when heroes existed, when poems were made, the human soul was in earnest, and hand fixed his thoughts on spiritual verities, with as strict a grasp as that of the hands on the sword, or the pencil, or the trowel. It is true that genius takes its rise out of the mountains of rectitude; that all beauty and power which men covet, are somehow born out of that Alpine district; that any extraordinary degree of beauty in man or woman involves a moral charm. Thus, I think, we very slowly admit in another man a higher degree of moral sentiment than our own,—a finer conscience, more impressionable, or, which marks minuter degrees; an ear to hear acuter notes of right and wrong than we can. I think we listen suspiciously and very slowly to any evidence to that point. But, once satisfied of such superiority, we set no limit to our expectation of his genius. For such persons are nearer to the secret of God than others; are bathed by
Emerson's Essays

sweeter waters; they hear notices, they see visions, where others are vacant. We believe that holiness confers a certain insight, because not by our private, but by our public force, can we share and know the nature of things.

There is an intimate interdependence of intellect and morals. Given the equality of two intellects,—which will form the most reliable judgments, the good or the bad hearted? "The heart has its arguments, with which the understanding is not acquainted." For the heart is at once aware of the state of health or disease, which is the controlling state, that is, of sanity or of insanity, prior, of course, to all question of the ingenuity of arguments, the amount of facts or the elegance of rhetoric. So intimate is this alliance of mind and heart that talent uniformly sinks with character. The bias of errors of principle carries away men into perilous courses, as soon as their will does not control their passion or talent. Hence the extraordinary blunders, and final wrong head, into which men spoiled by ambition usually fall. Hence the remedy for all blunders, the cure of blindness, the cure of crime, is love. "As much love, so much mind," said the Latin proverb. The superiority that has no superior; the redeemer and instructor of souls, as it is their primal essence, is love.

The moral must be the measure of health. If your eye is on the eternal, your intellect will grow, and your opinions and actions will have a beauty which no learning or combined advantages of other men can rival. The moment of your loss of faith, and acceptance of the lucrative standard, will be marked in the pause, or solstice of genius, the sequent retrogression, and the inevitable loss of attraction to other minds. The vulgar are sensible of the change in you, and of your descent, though they clap you on the back, and congratulate you on your increased common sense.

Our recent culture has been in natural science. We have learned the manners of the sun and of the moon, of the rivers and the rains, of the mineral and elemental kingdoms, of plants and animals. Man has learned to weigh the sun, and its weight neither loses nor gains. The path of a star, the moment of an eclipse, can be determined to the fraction of a second. Well, to him the book of history, the book of love, the lures of passion, and the commandments of duty are opened: and the next lesson taught is, the continuation of
the inflexible law of matter into the subtle kingdom of will, and of thought; that if, in sidereal ages, gravity and projection keep their craft, and the ball never loses its way in its wild path through space,—a secreter gravitation, a secreter projection, rule not less tyrannically in human history, and keep the balance of power from age to age unbroken. For, though the new element of freedom and an individual has been admitted, yet the primordial atoms are prefigured and predetermined to moral issues, are in search of justice, and ultimate right is done. Religion or worship is the attitude of those who see this unity, intimacy, and sincerity; who see that, against all appearances, the nature of things works for truth and right for ever.

'Tis a short sight to limit our faith in laws to those of gravity, of chemistry, of botany, and so forth. Those laws do not stop where our eyes lose them, but push the same geometry and chemistry up into the invisible plane of social and rational life, so that, look where we will, in a boy's game, or in the strifes of races, a perfect reaction, a perpetual judgment keeps watch and ward. And this appears in a class of facts which concerns all men, within and above their creeds. Shallow men believe in luck, believe in circumstances: It was somebody's name, or he happened to be there at the time, or, it was so then, and another day it would have been otherwise. Strong men believe in cause and effect. The man was born to do it, and his father was born to be the father of him and of this deed, and by looking narrowly, you shall see there was no luck in the matter, but it was all a problem in arithmetic, or an experiment in chemistry. The curve of the flight of the moth is pre-ordained, and all things go by number, rule, and weight.

Scepticism is unbelief in cause and effect. A man does not see that, as he eats, so he thinks: as he deals, so he is, and so he appears; he does not see that his son is the son of his thoughts and of his actions; that fortunes are not exceptions but fruits; that relation and connection are not somewhere and sometimes, but everywhere and always; no miscellany, no exemption, no anomaly,—but method and an even web; and what comes out, that was put in. As we are, so we do; and as we do, so is it done to us; we are the builders of our fortunes; cant and lying and the attempt to secure a good which does not belong to us, are once for all balked and vain.
But, in the human mind, this tie of fate is made alive. The law is the basis of the human mind. In us, it is inspiration; out there in nature, we see its fatal strength. We call it the moral sentiment.

We owe to the Hindoo Scriptures a definition of Law, which compares well with any in our Western books. "Law it is, which is without name, or colour, or hands, or feet; which is smallest of the least, and largest of the large: all, and knowing all things; which hears without ears, sees without eyes, moves without feet, and seizes without hands."

If any reader tax me with using vague and traditional phrases, let me suggest to him, by a few examples, what kind of a trust this is, and how real. Let me show him that the dice are loaded; that the colours are fast, because they are the native colours of the fleece; that the globe is a battery, because every atom is a magnet; and that the police and sincerity of the universe are secured by God's delegating his divinity to every particle; that there is no room for hypocrisy, no margin for choice.

The countryman leaving his native village, for the first time, and going abroad, finds all his habits broken up. In a new nation and language, his sect, as Quaker, or Lutheran, is lost. What! it is not then necessary to the order and existence of society? He misses this, and the commanding eye of his neighbourhood, which held him to decorum. This is the peril of New York, of New Orleans, of London, of Paris, to young men. But after a little experience, he makes the discovery that there are no large cities,—none large enough to hide in; that the censors of action are as numerous and as near in Paris, as in Littleton or Portland; that the gossip is as prompt and vengeful. There is no concealment, and, for each offence, a several vengeance; that reaction, or nothing for nothing, or things are as broad as they are long, is not a rule for Littleton or Portland, but for the universe.

We cannot spare the coarsest muniment of virtue. We are disgusted by gossip; yet it is of importance to keep the angels in their proprieties. The smallest fly will draw blood, and gossip is a weapon impossible to exclude from the privatest, highest, selectest. Nature created a police of many ranks. God has delegated himself to a million deputies. From these low external penalties the scale ascends. Next come the resentments, the fears, which injustice calls out; then the false relations in which the offender is put to other
men; and the reaction of his fault on himself, in the solitude and devastation of his mind.

You cannot hide any secret. If the artist succour his flagging spirits by opium or wine, his work will characterise itself as the effect of opium or wine. If you make a picture or a statue, it sets the beholder in that state of mind you had when you made it. If you spend for show, on building or gardening, or on pictures, or on equipages, it will so appear. We are all physiognomists and penetrators of character, and things themselves are detective. If you follow the suburban fashion in building a sumptuous-looking house for a little money, it will appear to all eyes as a cheap dear house. There is no privacy that cannot be penetrated. No secret can be kept in the civilised world. Society is a masked ball, where every one hides his real character, and reveals it by hiding. If a man wish to conceal anything he carries, those whom he meets know that he conceals somewhat, and usually know what he conceals. Is it otherwise if there be some belief or some purpose he would bury in his breast? 'Tis as hard to hide as fire. He is a strong man who can hold down his opinion. A man cannot utter two or three sentences without disclosing to intelligent ears precisely where he stands in life and thought, namely, whether in the kingdom of the senses and the understanding, or in that of ideas and imagination, in the realm of intuitions and duty. People seem not to see that their opinion of the world is also a confession of character. We can only see what we are, and if we misbehave we suspect others. The fame of Shakespeare or of Voltaire, of Thomas à Kempis or of Bonaparte, characterises those who give it. As gas-light is found to be the best nocturnal police, so the universe protects itself by pitiless publicity.

Each must be armed—not necessarily with musket and pike. Happy, if, seeing these, he can feel that he has better muskets and pikes in his energy and constancy. To every creature is his own weapon, however skilfully concealed from himself a good while. His work is sword and shield. Let him accuse none, let him injure none. The way to mend the bad world is to create the right world. Here is a low political economy plotting to cut the throat of foreign competition, and establish our own;—excluding others by force, or making war on them; or, by cunning tariffs, giving preference to worse wares of ours. But the real and lasting victories are those of peace, and not of war. The way to conquer the
foreign artisan, is, not to kill him, but to beat his work. And the Crystal Palaces and World Fairs, with their committees and prizes on all kinds of industry, are the result of this feeling. The American workman who strikes ten blows with his hammer, whilst the foreign workman only strikes one, is as really vanquishing that foreigner as if the blows were aimed at and told on his person. I look on that man as happy, who, when there is question of success, looks into his work for a reply, not into the market, not into opinion, not into patronage. In every variety of human employment, in the mechanical and in the fine arts, in navigation, in farming, in legislating, there are among the numbers who do their task perfunctorily, as we say, or just to pass, and as badly as they dare,—there are the working men, on whom the burden of the business falls,—those who love work, and love to see it rightly done, who finish their task for its own sake; and the state and the world is happy that has the most of such finishers. The world will always do justice at last to such finishers: it cannot otherwise. He who has acquired the ability, may wait securely the occasion of making it felt and appreciated, and know that it will not loiter. Men talk as if victory were something fortunate. Work is victory. Wherever work is done, victory is obtained. There is no chance, and no blanks. You want but one verdict: if you have your own, you are secure of the rest. And yet, if witnesses are wanted, witnesses are near. There was never a man born so wise or good, but one or more companions came into the world with him, who delight in his faculty and report it. I cannot see without awe, that no man thinks alone, and no man acts alone, but the divine assessors who came up with him into life,—now under one disguise, now under another,—like a police in citizens’ clothes, walk with him, step for step through all the kingdom of time.

This reaction, this sincerity, is the property of all things. To make our word or act sublime, we must make it real. It is our system that counts, not the single word or unsupported action. Use what language you will, you can never say anything but what you are. What I am, and what I think, is conveyed to you, in spite of my efforts to hold it back. What I am has been secretly conveyed from me to another, whilst I was vainly making up my mind to tell him it. He has heard from me what I never spoke.

As men get on in life, they acquire a love for sincerity, and
somewhat less solicitude to be lulled or amused. In the progress of the character, there is an increasing faith in the moral sentiment, and a decreasing faith in propositions. Young people admire talents, and particular excellences. As we grow older, we value total powers and effects, as the spirit, or quality of the man. We have another sight, and a new standard; an insight which disregards what is done for the eye, and pierces to the doer; an ear which hears not what men say, but hears what they do not say.

There was a wise devout man, who is called, in the Catholic Church, St. Philip Neri, of whom many anecdotes touching his discernment and benevolence are told at Naples and Rome. Among the nuns in a convent not far from Rome, one had appeared, who laid claim to certain rare gifts of inspiration and prophecy, and the abbess advised the Holy Father, at Rome, of the wonderful powers shown by her novice. The Pope did not well know what to make of these new claims, and Philip coming in from a journey one day, he consulted him. Philip undertook to visit the nun, and ascertain her character. He threw himself on his mule, all travel-soiled as he was, and hastened through the mud and mire to the distant convent. He told the abbess the wishes of his Holiness, and begged her to summon the nun without delay. The nun was sent for, and, as soon as she came into the apartment, Philip stretched out his leg all bespattered with mud, and desired her to draw off his boots. The young nun, who had become the object of much attention and respect, drew back with anger, and refused the office. Philip ran out of doors, mounted his mule, and returned instantly to the Pope: "Give yourself no uneasiness, Holy Father, any longer: here is no miracle, for here is no humility."

We need not much mind what people please to say, but what they must say; what their natures say, though their busy, artful, Yankee understandings try to hold back, and choke that word, and to articulate something different. If we will sit quietly,—what they ought to say is said, with their will, or against their will. We do not care for you, let us pretend what we will;—we are always looking through you to the dim dictator behind you. Whilst your habit or whim chatters, we civilly and impatiently wait until that wise superior shall speak again. Even children are not deceived by the false reasons which their parents give in answer to their questions, whether touching natural facts, or religion,
or persons. When the parent, instead of thinking how it really is, puts them off with a traditional or a hypocritical answer, the children perceive that it is traditional or hypocritical. To a sound constitution the defect of another is at once manifest: and the marks of it are only concealed from us by our own dislocation. An anatomical observer remarks, that the sympathies of the chest, abdomen, and pelvis, tell at last on the face, and on all its features. Not only does our beauty waste, but it leaves word how it went to waste. Physiognomy and phrenology are not new sciences, but declarations of the soul that it is aware of certain new sources of information. And now sciences of broader scope are starting up behind these. And so for ourselves, it is really of little importance what blunders in statement we make, so only we make no wilful departures from the truth. How a man’s truth comes to mind, long after we have forgotten all his words! How it comes to us in silent hours, that truth is our only armour in all passages of life and death! Wit is cheap, and anger is cheap; but if you cannot argue or explain yourself to the other party, cleave to the truth against me, against thee, and you gain a station from which you cannot be dislodged. The other party will forget the words that you spoke, but the part you took continues to plead for you.

Why should I hasten to solve every riddle which life offers me? I am well assured that the Questioner, who brings me so many problems, will bring the answers also in due time. Very rich, very potent, very cheerful Giver that he is, he shall have it all his own way, for me. Why should I give up my thought, because I cannot answer an objection to it? Consider only, whether it remains in my life the same it was. That only which we have within, can we see without. If we meet no gods, it is because we harbour none. If there is grandeur in you, you will find grandeur in porters and sweeps. He only is rightly immortal, to whom all things are immortal. I have read somewhere, that none is accomplished, so long as any are incomplete; that the happiness of one cannot consist with the misery of any other.

The Buddhists say, "No seed will die:" every seed will grow. Where is the service which can escape its remuneration? What is vulgar, and the essence of all vulgarity, but the avarice of reward? 'Tis the difference of artisan and artist, of talent and genius, of sinner and saint. The man
whose eyes are nailed not on the nature of his act, but on the wages, whether it be money, or office, or fame,—is almost equally low. He is great, whose eyes are opened to see that the reward of actions cannot be escaped, because he is transformed into his action, and taketh its nature, which bears its own fruit, like every other tree. A great man cannot be hindered of the effect of his act, because it is immediate. The genius of life is friendly to the noble, and in the dark brings them friends from far. Fear God, and where you go men shall think they walk in hallowed cathedrals.

And so I look on those sentiments which make the glory of the human being, love, humility, faith, as being also the intimacy of Divinity in the atoms; and that, as soon as the man is right, assurances and previsions emanate from the interior of his body and his mind; as, when flowers reach their ripeness, incense exhales from them, and as a beautiful atmosphere is generated from the planet by the averaged emanations from all its rocks and soils.

Thus man is made equal to every event. He can face danger for the right. A poor, tender, painful body, he can run into flame or bullets or pestilence, with duty for his guide. He feels the insurance of a just employment. I am not afraid of accident, as long as I am in my place. It is strange that superior persons should not feel that they have some better resistance against cholera, than avoiding green peas and salads. Life is hardly respectable,—is it? if it has no generous, guaranteeing task, no duties or affections, that constitute a necessity of existing. Every man's task is his life-preserver. The conviction that his work is dear to God and cannot be spared, defends him. The lightning-rod that disarms the cloud of its threat is his body in its duty. A high aim reacts on the means, on the days, on the organs of the body. A high aim is curative, as well as Arnica. "Napoleon," says Goethe, "visited those sick of the plague, in order to prove that the man who could vanquish fear, could vanquish the plague also; and he was right. 'Tis incredible what force the will has in such cases: it penetrates the body, and puts it in a state of activity, which repels all hurtful influences; whilst fear invites them."

It is related of William of Orange, that, whilst he was besieging a town on the continent, a gentleman sent to him on public business came to his camp, and, learning that the King was before the walls, he ventured to go where he was. He
found him directing the operation of his gunners, and having explained his errand, and received his answer, the King said, "Do you not know, sir, that every moment you spend here is at the risk of your life?" "I run no more risk," replied the gentleman, "than your Majesty." "Yes," said the King, "but my duty brings me here, and yours does not." In a few minutes, a cannon-ball fell on the spot, and the gentleman was killed.

Thus can the faithful student reverse all the warnings of his early instinct, under the guidance of a deeper instinct. He learns to welcome misfortune, learns that adversity is the prosperity of the great. He learns the greatness of humility. He shall work in the dark, work against failure, pain, and ill-will. If he is insulted, he can be insulted; all his affair is not to insult. Hafiz writes:

"At the last day, men shall wear
On their heads the dust,
As ensign and as ornament
Of their lowly trust."

The moral equalises all; enriches, empowers all. It is the coin which buys all, and which all find in their pocket. Under the whip of the driver, the slave shall feel his equality with saints and heroes. In the greatest destitution and calamity, it surprises man with a feeling of elasticity which makes nothing of loss.

I recall some traits of a remarkable person whose life and discourse betrayed many inspirations of this sentiment. Benedict was always great in the present time. He had hoarded nothing from the past, neither in his cabinets, neither in his memory. He had no designs on the future, neither for what he should do to men, nor for what men should do for him. He said, "I am never beaten until I know that I am beaten. I meet powerful brutal people to whom I have no skill to reply. They think they have defeated me. It is so published in society, in the journals; I am defeated in this fashion, in all men's sight, perhaps on a dozen different lines. My ledger may show that I am in debt, cannot yet make my ends meet, and vanquish the enemy so. My race may not be prospering: we are sick, ugly, obscure, unpopular. My children may be worsted. I seem to fail in my friends and clients, too. That is to say, in all the encounters that have yet chanced, I have not been weaponed for that particular occasion, and have been historically beaten; and yet, I
know, all the time, that I have never been beaten; have never yet fought, shall certainly fight, when my hour comes, and shall beat." "A man," says the Vishnu Sarma, "who having well compared his own strength or weakness with that of others, after all doth not know the difference, is easily overcome by his enemies."

"I spent," he said, "ten months in the country. Thick-starred Orion was my only companion. Wherever a squirrel or a bee can go with security, I can go. I ate whatever was set before me; I touched ivy and dogwood. When I went abroad I kept company with every man on the road, for I knew that my evil and my good did not come from these, but from the Spirit, whose servant I was. For I could not stoop to be a circumstance, as they did, who put their life into their fortune and their company. I would not degrade myself by casting about in my memory for a thought, nor by waiting for one. If the thought come, I would give it entertainment. It should, as it ought, go into my hands and feet; but if it come not spontaneously, it comes not rightly at all. If it can spare me, I am sure I can spare it. It shall be the same with my friends. I will never woo the loveliest. I will not ask any friendship or favour. When I come to my own, we shall both know it. Nothing will be to be asked or to be granted." Benedict went out to seek his friend, and met him on the way; but he expressed no surprise at any coincidences. On the other hand, if he called at the door of his friend, and he was not at home, he did not go again; concluding that he had misinterpreted the intimations.

He had the whim not to make an apology to the same individual whom he had wronged. For this, he said, was a piece of personal vanity; but he would correct his conduct in that respect in which he had faulted, to the next person he should meet. Thus, he said, universal justice was satisfied.

Mira came to ask what she should do with the poor Genesee woman who had hired herself to work for her, at a shilling a day, and, now sickening, was like to be bedridden on her hands. Should she keep her, or should she dismiss her? But Benedict said, "Why ask? One thing will clear itself as the thing to be done, and not another, when the hour comes. Is it a question, whether to put her into the street? Just as much whether to thrust the little Jenny on your arm
into the street. The milk and meal you give the beggar will fatten Jenny. Thrust the woman out, and you thrust your babe out of doors, whether it so seem to you or not."

In the Shakers, so called, I find one piece of belief, in the doctrine which they faithfully hold, that encourages them to open their doors to every wayfaring man who proposes to come among them; for, they say, the Spirit will presently manifest to the man himself, and to the society, what manner of person he is, and whether he belongs among them. They do not receive him, they do not reject him. And not in vain have they worn their clay coat, and drudged in their fields, and shuffled in their Bruin dance, from year to year, if they have truly learned thus much wisdom.

Honour him whose life is perpetual victory; him, who, by sympathy with the invisible and real, finds support in labour, instead of praise; who does not shine, and would rather not. With eyes open, he makes the choice of virtue, which outrages the virtuous; of religion, which churches stop their discords to burn and exterminate; for the highest virtue is always against the law.

Miracle comes to the miraculous, not to the arithmetician. Talent and success interest me but moderately. The great class, they who affect our imagination, the men who could not make their hands meet around their objects, the rapt, the lost, the fools of ideas,—they suggest what they cannot execute. They speak to the ages, and are heard from afar. The Spirit does not love cripples and malformations. If there ever was a good man, be certain, there was another, and will be more.

And so in relation to that future hour, that spectre clothed with beauty at our curtain by night, at our table by day,—the apprehension, the assurance of a coming change. The race of mankind have always offered at least this implied thanks for the gift of existence,—namely, the terror of its being taken away; the insatiable curiosity and appetite for its continuation. The whole revelation that is vouchsafed us, is, the gentle trust, which, in our experience we find, will cover also with flowers the slopes of this chasm.

Of immortality, the soul, when well employed, is incurious. It is so well, that it is sure it will be well. It asks no questions of the Supreme Power. The son of Antiochus asked his father when he would join battle? "Dost thou fear," replied the King, "that thou only in all the army wilt not hear the
'Tis a higher thing to confide, that, if it is best we should live, we shall live,—'tis higher to have this conviction than to have the lease of indefinite centuries and aeons. Higher than the question of our duration is the question of our deserving. Immortality will come to such as are fit for it, and he who would be a great soul in future must be a great soul now. It is a doctrine too great to rest on any legend, that is, on any man's experience but our own. It must be proved, if at all, from our own activity and designs, which imply an interminable future for their play.

What is called religion effeminates and demoralises. Such as you are, the gods themselves could not help you. Men are too often unfit to live, from their obvious inequality to their own necessities, or they suffer from politics, or bad neighbours, or from sickness, and they would gladly know that they were to be dismissed from the duties of life. But the wise instinct asks, "How will death help them?" These are not dismissed when they die. You shall not wish for death out of pusillanimity. The weight of the universe is pressed down on the shoulders of each moral agent to hold him to his task. The only path of escape known in all the worlds of God is performance. You must do your work before you shall be released. And as far as it is a question of fact respecting the government of the universe, Marcus Antoninus summed the whole in a word, "It is pleasant to die, if there be gods; and sad to live, if there be none."

And so I think that the last lesson of life, the choral song which rises from all elements and all angels, is, a voluntary obedience, a necessitated freedom. Man is made of the same atoms as the world is, he shares the same impressions, predispositions, and destiny. When his mind is illuminated, when his heart is kind, he throws himself joyfully into the sublime order, and does, with knowledge, what the stones do by structure.

The religion which is to guide and fulfil the present and coming ages, whatever else it be, must be intellectual. The scientific mind must have a faith, which is science. "There are two things," said Mahomet, "which I abhor, the learned in his infidelities, and the fool in his devotions." Our times are impatient of both, and specially of the last. Let us have nothing now which is not its own evidence. There is surely enough for the heart and imagination in the religion itself.
Let us not be pestered with assertions and half-truths, with emotions and snuffle.

There will be a new church founded on moral science, at first cold and naked, a babe in a manger again, the algebra and mathematics of ethical law, the church of men to come, without shawms, or psaltery, or sackbut; but it will have heaven and earth for its beams and rafters; science for symbol and illustration; it will fast enough gather beauty, music, picture, poetry. Was never stoicism so stern and exigent as this shall be? It shall send man home to his central solitude, shame these social, supplicating manners, and make him know that much of the time he must have himself to his friend. He shall expect no co-operation, he shall walk with no companion. The nameless Thought, the nameless Power, the superpersonal Heart,—he shall repose alone on that. He needs only his own verdict. No good fame can help, no bad fame can hurt him. The Laws are his consolers, the good Laws themselves are alive, they know if he have kept them, they animate him with the leading of great duty, and an endless horizon. Honour and fortune exist to him who always recognises the neighbourhood of the great, always feels himself in the presence of high causes.

VII.—CONSIDERATIONS BY THE WAY

Hear what British Merlin sung,
Of keenest eye and truest tongue.
Say not, the chiefs who first arrive
Usurp the seats for which all strive,
The forefathers this land who found
Failed to plant the vantage-ground;
Ever from one who comes to-morrow
Men wait their good and truth to borrow.
But wilt thou measure all thy road,
See thou lift the lightest load.
Who has little, to him who has less, can spare,
And thou, Cyndyllan’s son! beware
Ponderous gold and stuffs to bear,
To falter ere thou thy task fulfil,—
Only the light-armed climb the hill.
The richest of all lords is Use,
And ruddy Health the loftiest Muse.
Live in the sunshine, swim the sea,
Drink the wild air’s salubrity;
Where the star Canope shines in May,
Shepherds are thankful, and nations gay.
The music that can deepest reach,
And cure all ill, is cordial speech:
Mask thy wisdom with delight,
Toy with the bow, yet hit the white.
Of all wit's uses, the main one
Is to live well with who has none.
Cleave to thine acre; the round year
Will fetch all fruits and virtues here.
Fool and foe may harmless roam,
Loved and lovers bide at home.
A day for toil, an hour for sport,
But for a friend is life too short.

Although this garrulity of advising is born with us, I confess that life is rather a subject of wonder, than of didactics. So much fate, so much irresistible dictation from temperament and unknown inspiration enters into it, that we doubt we can say anything out of our own experience whereby to help each other. All the professions are timid and expectant agencies. The priest is glad if his prayers or his sermon meet the condition of any soul; if of two, if of ten, 'tis a signal success. But he walked to the church without any assurance that he knew the distemper, or could heal it. The physician prescribes hesitatingly out of his few resources, the same tonic or sedative to this new and peculiar constitution, which he has applied with various success to a hundred men before. If the patient mends he is glad and surprised. If the lawyer advises the client, and tells his story to the jury, and leaves it with them, and is as gay and as much relieved as the client if it turns out that he has a verdict. The judge weighs the arguments, and puts a brave face on the matter, and, since there must be a decision, decides as he can, and hopes he has done justice, and given satisfaction to the community; but he is only an advocate after all. And so is all life a timid and unskilful spectator. We do what we must, and call it by the best names. We like very well to be praised for our action, but our conscience says, "Not unto us." 'Tis little we can do for each other. We accompany the youth with sympathy, and manifold old sayings of the wise, to the gate of the arena, but 'tis certain that not by strength of ours, or of the old sayings, but only on strength of his own, unknown to us or to any, he must stand or fall. That by which a man conquers in any passage, is a profound secret to every other being in the world, and it is only as he turns his back on us and on all men, and draws on this most private wisdom, that any good can come to him. What we have, therefore, to say of life, is rather description, or, if you please, celebration, than available rules.
Yet vigour is contagious, and whatever makes us either think or feel strongly, adds to our power, and enlarges our field of action. We have a debt to every great heart, to every fine genius; to those who have put life and fortune on the cast of an act of justice; to those who have added new sciences; to those who have refined life by elegant pursuits. 'Tis the fine souls who serve us, and not what is called fine society. Fine society is only a self-protection against the vulgarities of the street and the tavern. Fine society, in the common acceptation, has neither ideas nor aims. It renders the service of a perfumery, or a laundry, not of a farm or factory. 'Tis an exclusion and a precinct. Sydney Smith said, "A few yards in London cement or dissolve friendship." It is an unprincipled decorum; an affair of clean linen and coaches, of gloves, cards, and elegance in trifles. There are other measures of self-respect for a man, than the number of clean shirts he puts on every day. Society wishes to be amused. I do not wish to be amused. I wish that life should not be cheap, but sacred. I wish the days to be as centuries, loaded, fragrant. Now we reckon them as bank-days, by some debt which is to be paid us, or which we are to pay, or some pleasure we are to taste. Is all we have to do to draw the breath in, and blow it out again? Porphyry's definition is better: "Life is that which holds matter together." The babe in arms is a channel through which the energies we call fate, love, and reason, visibly stream. See what a cometary train of auxiliaries man carries with him, of animals, plants, stones, gases, and imponderable elements. Let us infer his ends from this pomp of means. Mirabeau said, "Why should we feel ourselves to be men, unless it be to succeed in everything, everywhere. You must say of nothing, That is beneath me, nor feel that anything can be out of your power. Nothing is impossible to the man who can will. Is that necessary? That shall be:—this is the only law of success." Whoever said it, this is in the right key. But this is not the tone and genius of the men in the street. In the streets we grow cynical. The men we meet are coarse and torpid. The finest wits have their sediment. What quantities of fribbles, paupers, invalids, epicures, antiquaries, politicians, thieves, and triflers of both sexes, might be advantageously spared! Mankind divides itself into two classes,—benefactors and malefactors. The second class is vast, the first a handful. A person seldom
falls sick, but the bystanders are animated with a faint hope that he will die:—quantities of poor lives; of distressing invalids; of cases for a gun. Franklin said, "Mankind are very superficial and dastardly: they begin upon a thing, but, meeting with a difficulty, they fly from it discouraged: but they have capacities, if they would employ them." Shall we then judge a country by the majority, or by the minority? By the minority, surely. 'Tis pedantry to estimate nations by the census, or by square miles of land, or other than by their importance to the mind of the time.

Leave this hypocritical prating about the masses. Masses are rude, lame, unmade, pernicious in their demands and influence, and need not to be flattered but to be schooled. I wish not to concede anything to them, but to tame, drill, divide, and break them up, and draw individuals out of them. The worst of charity is, that the lives you are asked to preserve are not worth preserving. Masses! the calamity is the masses. I do not wish any mass at all, but honest men only, lovely, sweet, accomplished women only, and no shovel-handed, narrow-brained, gin-drinking million stockingers or lazzaroni at all. If government knew how, I should like to see it check, not multiply, the population. When it reaches its true law of action, every man that is born will be hailed as essential. Away with this hurrah of masses, and let us have the considerate vote of single men spoken on their honour and their conscience. In old Egypt, it was established law, that the vote of a prophet be reckoned equal to a hundred hands. I think it was much under-estimated. "Clay and clay differ in dignity" as we discover by our preferences every day. What a vicious practice is this of our politicians at Washington pairing off! as if one man who votes wrong, going away, could excuse you, who mean to vote right, for going away; or, as if your presence did not tell in more ways than in your vote. Suppose the three hundred heroes at Thermopylae had paired off with three hundred Persians: would it have been all the same to Greece, and to history? Napoleon was called by his men Cent Mille. Add honesty to him, and they might have called him Hundred Million.

Nature makes fifty poor melons for one that is good, and shakes down a tree full of gnarled, wormy, unripe crabs, before you can find a dozen dessert apples; and she scatters nations of naked Indians, and nations of clothed Christians, with two or three good heads among them. Nature works.
very hard, and only hits the white once in a million throws. In mankind, she is contented if she yields one master in a century. The more difficulty there is in creating good men, the more they are used when they come. I once counted in a little neighbourhood, and found that every able-bodied man had, say, from twelve to fifteen persons dependent on him for material aid,—to whom he is to be for spoon and jug, for backer and sponsor, for nursery and hospital, and many functions beside: nor does it seem to make much difference whether he is bachelor or patriarch; if he do not violently decline the duties that fall to him, this amount of helpfulness will in one way or another be brought home to him. This is the tax which his abilities pay. The good men are employed for private centres of use, and for larger influence. All revelations, whether of mechanical or intellectual or moral science, are made not to communities, but to single persons. All the marked events of our day, all the cities, all the colonisations, may be traced back to their origin in a private brain. All the feats which make our civility were the thoughts of a few good heads.

Meantime, this spawning productivity is not noxious or needless. You would say, this rabble of nations might be spared. But no, they are all counted and depended on. Fate keeps everything alive so long as the smallest thread of public necessity holds it on to the tree. The coxcomb and bully and thief class are allowed as proletaries, every one of their vices being the excess or acridity of a virtue. The mass are animal, in pupillage, and near chimpanzee. But the units, whereof this mass is composed, are neuters, every one of which may be grown to a queen-bee. The rule is, we are used as brute atoms, until we think: then, we use all the rest. Nature turns all malfaisance to good. Nature provided for real needs. No sane man at last distrusts himself. His existence is a perfect answer to all sentimental cavils. If he is, he is wanted, and has the precise properties that are required. That we are here, is proof we ought to be here. We have as good right, and the same sort of right to be here, as Cape Cod or Sandy Hook have to be there.

To say, then, the majority are wicked, means no malice, no bad heart in the observer, but, simply, that the majority are unripe, and have not yet come to themselves, do not yet know their opinion. That, if they knew it, is an oracle for them and for all. But in the passing moment, the quadruped
interest is very prone to prevail: and this beast-force, whilst it makes the discipline of the world, the school of heroes, the glory of martyrs, has provoked, in every age, the satire of wits, and the tears of good men. They find the journals, the clubs, the governments, the churches, to be in the interest and the pay of the devil. And wise men have met this obstruction in their times, like Socrates, with his famous irony; like Bacon, with life-long dissimulation; like Erasmus, with his book The Praise of Folly; like Rabelais, with his satire rending the nations. "They were the fools who cried against me, you will say," wrote the Chevalier de Boufflers to Grimm; "aye, but the fools have the advantage of numbers, and 'tis that which decides. 'Tis of no use for us to make war with them; we shall not weaken them; they will always be the masters. There will not be a practice or a usage introduced of which they are not the authors."

In front of these sinister facts, the first lesson of history is the good of evil. Good is a good doctor, but Bad is sometimes a better. 'Tis the oppressions of William the Norman, savage forest-laws, and crushing despotism, that made possible the inspirations of the Magna Charta under John. Edward I. wanted money, armies, castles, and as much as he could get. It was necessary to call the people together by shorter, swifter ways,—and the House of Commons arose. To obtain subsidies, he paid in privileges. In the twenty-fourth year of his reign, he decreed, "that no tax should be levied without consent of Lords and Commons;"—which is the basis of the English Constitution. Plutarch affirms that the cruel wars which followed the march of Alexander, introduced the civility, language, and arts of Greece into the savage East; introduced marriage; built seventy cities; and united hostile nations under one government. The barbarians who broke up the Roman empire did not arrive a day too soon. Schiller says, the Thirty Years' War made Germany a nation. Rough, selfish despots serve men immensely, as Henry VIII. in the contest with the Pope; as the infatuations no less than the wisdom of Cromwell; as the ferocity of the Russian czars; as the fanaticism of the French regicides of 1789. The frost which kills the harvest of a year, saves the harvests of a century, by destroying the weevil or the locust. Wars, fires, plagues, break up immoveable routine, clear the ground of rotten races and dens of distemper, and open a fair field to new men. There is a
tendency in things to right themselves, and the war or revolution or bankruptcy that shatters a rotten system, allows things to take a new and natural order. The sharpest evils are bent into that periodicity which makes the errors of planets, and the fevers and distempers of men, self-limiting. Nature is upheld by antagonism. Passions, resistance, danger, are educators. We acquire the strength we have overcome. Without war, no soldier; without enemies, no hero. The sun were insipid, if the universe were not opaque. And the glory of character is in affronting the horrors of depravity, to draw thence new nobilities of power: as Art lives and thrills in new use and combining of contrasts, and mining into the dark evermore for blacker pits of night. What would painter do, or what would poet or saint, but for crucifixions and hells? And evermore in the world is this marvellous balance of beauty and disgust, magnificence and rats. Not Antoninus, but a poor washerwoman, said, "The more trouble, the more lion; that's my principle."

I do not think very respectfully of the designs or the doings of the people who went to California, in 1849. It was a rush and a scramble of needy adventurers, and, in the western country, a general jail-delivery of all the rowdies of the rivers. Some of them went with honest purposes, some with very bad ones, and all of them with the very commonplace wish to find a short way to wealth. But nature watches over all, and turns this malfaisance to good. California gets peopled and subdued,—civilised in this immoral way,—and, on this fiction, a real prosperity is rooted and grown. 'Tis a decoy-duck; 'tis tubs thrown to amuse the whale: but real ducks, and whales that yield oil, are caught. And out of Sabine rapes, and out of robbers' forays, real Romes and their heroisms come in fulness of time.

In America, the geography is sublime, but the men are not: the inventions are excellent, but the inventors one is sometimes ashamed of. The agencies by which events so grand as the opening of California, of Texas, of Oregon, and the junction of the two oceans are effected, are paltry,—coarse selfishness, fraud, and conspiracy: and most of the great results of history are brought about by discreditable means.

The benefaction derived in Illinois, and the great West, from railroads, is inestimable, and vastly exceeding any intentional philanthropy on record. What is the benefit done
by a good King Alfred, or by a Howard, or Pestalozzi, or Elizabeth Fry, or Florence Nightingale, or any lover, less or larger, compared with the involuntary blessing wrought on nations by the selfish capitalists who built the Illinois, Michigan, and the network of the Mississippi valley roads, which have evoked not only all the wealth of the soil, but the energy of millions of men. 'Tis a sentence of ancient wisdom, "that God hangs the greatest weights on the smallest wires."

What happens thus to nations, befalls every day in private houses. When the friends of a gentleman brought to his notice the follies of his sons, with many hints of their danger, he replied, that he knew so much mischief when he was a boy, and had turned out on the whole so successfully, that he was not alarmed by the dissipation of boys; 'twas dangerous water, but, he thought, they would soon touch bottom, and then swim to the top. This is bold practice, and there are many failures to a good escape. Yet one would say, that a good understanding would suffice as well as moral sensibility to keep one erect; the gratifications of the passions are so quickly seen to be damaging, and,—what men like least,—seriously lowering them in social rank. Then all talent sinks with character.

"Croyez moi, l'erreur aussi à son mérite," said Voltaire. We see those who surmount, by dint of some egotism or infatuation, obstacles from which the prudent recoil. The right partisan is a heady narrow man, who, because he does not see many things, sees some one thing with heat and exaggeration, and, if he falls among other narrow men, or on objects which have a brief importance, as some trade or politics of the hour, he prefers it to the universe, and seems inspired, and a godsend to those who wish to magnify the matter, and carry a point. Better, certainly, if we could secure the strength and fire which rude, passionate men bring into society, quite clear of their vices. But who dares draw out the linchpin from the wagon-wheel? 'Tis so manifest, that there is no moral deformity, but is a good passion out of place; that there is no man who is not indebted to his foibles; that, according to the old oracle, "the Furies are the bonds of men;" that the poisons are our principal medicines, which kill the disease, and save the life. In the high prophetic phrase, He causes the wrath of man to praise him, and twists and wrenches our evil to our good. Shakespeare wrote—

"'Tis said, best men are moulded of their faults"—
and great educators and lawgivers, and especially generals, and leaders of colonies, mainly rely on this stuff, and esteem men of irregular and passionall force the best timber. A man of sense and energy, the late head of the Farm School in Boston harbour, said to me, "I want none of your good boys,—give me the bad ones." And this is the reason, I suppose, why, as soon as the children are good, the mothers are scared, and think they are going to die. Mirabeau said, "There are none but men of strong passions capable of going to greatness; none but such capable of meriting the public gratitude." Passion, though a bad regulator, is a powerful spring. Any absorbing passion has the effect to deliver from the little coils and cares of every day: 'tis the heat which sets our human atoms spinning, overcomes the friction of crossing thresholds, and first addresses in society, and gives us a good start and speed, easy to continue when once it is begun. In short, there is no man who is not at some time indebted to his vices, as no plant that is not fed from manures. We only insist that the man meliorate, and that the plant grow upward, and convert the base into the better nature.

The wise workman will not regret the poverty or the solitude which brought out his working talents. The youth is charmed with the fine air and accomplishments of the children of fortune. But all great men come out of the middle classes. 'Tis better for the head; 'tis better for the heart. Marcus Antoninus says, that Fronto told him, "that the so-called high-born are for the most part heartless;" whilst nothing is so indicative of deepest culture as a tender consideration of the ignorant. Charles James Fox said of England, "The history of this country proves, that we are not to expect from men in affluent circumstances the vigilance, energy, and exertion without which the House of Commons would lose its greatest force and weight. Human nature is prone to indulgence, and the most meritorious public services have always been performed by persons in a condition of life removed from opulence." And yet what we ask daily, is to be conventional. Supply, most kind gods! this defect in my address, in my form, in my fortunes, which puts me a little out of the ring: supply it, and let me be like the rest whom I admire, and on good terms with them. But the wise gods say, No, we have better things for thee. By humiliations, by defeats, by loss of sympathy, by gulfs of disparity, learn a wider truth and humanity than that of a
fine gentleman. A Fifth-Avenue landlord, a West-end householder, is not the highest style of man: and, though good hearts and sound minds are of no condition, yet he who is to be wise for many, must not be protected. He must know the huts where poor men lie, and the chores which poor men do. The first-class minds, Æsop, Socrates, Cervantes, Shakespeare, Franklin, had the poor man’s feeling and mortification. A rich man was never insulted in his life: but this man must be stung. A rich man was never in danger from cold, or hunger, or war, or ruffians, and you can see he was not, from the moderation of his ideas. ’Tis a fatal disadvantage to be cockered, and to eat too much cake. What tests of manhood could he stand? Take him out of his protections. He is a good book-keeper; or he is a shrewd adviser in the insurance office: perhaps he could pass a college examination, and take his degrees: perhaps he can give wise counsel in a court of law. Now plant him down among farmers, firemen, Indians, and emigrants. Set a dog on him: set a highwayman on him: try him with a course of mobs, send him to Kansas, to Pike’s Peak, to Oregon: and, if he have true faculty, this may be the element he wants, and he will come out of it with broader wisdom and manly power. Æsop, Saadi, Cervantes, Regnard, have been taken by corsairs, left for dead, sold for slaves, and know the realities of human life.

Bad times have a scientific value. These are occasions a good learner would not miss. As we go gladly to Faneuil Hall, to be played upon by the stormy winds and strong fingers of enraged partiotism, so is a fanatical persecution, civil war, national bankruptcy, or revolution, more rich in the central tones than languid years of prosperity. What had been, ever since our memory, solid continent, yawns apart, and discloses its composition and genesis. We learn geology the morning after the earthquake, on ghastly diagrams of cloven mountains, upheaved plains, and the dry bed of the sea.

In our life and culture, everything is worked up, and comes in use.—passion, war, revolt, bankruptcy, and not less, folly and blunders, insult, ennui, and bad company. Nature is a rag merchant, who works up every shred and ort and end into new creations; like a good chemist, whom I found, the other day, in his laboratory, converting his old shirts into pure white sugar. Life is a boundless privilege, and when you pay
for your ticket, and get into the car, you have no guess what good company you shall find there. You buy much that is not rendered in the bill. Men achieve a certain greatness unawares, when working to another aim.

If now in this connection of discourse, we should venture on laying down the first obvious rules of life, I will not here repeat the first rule of economy, already propounded once and again, that every man shall maintain himself,—but I will say, get health. No labour, pains, temperance, poverty, nor exercise, that can gain it, must be grudged. For sickness is a cannibal which eats up all the life and youth it can lay hold of, and absorbs its own sons and daughters. I figure it as a pale, wailing, distracted phantom, absolutely selfish, heedless of what is good and great, attentive to its sensations, losing its soul, and afflicting other souls with meanness and mopings, and with ministration to its voracity of trifles. Dr. Johnson said severely, "Every man is a rascal as soon as he is sick." Drop the cant, and treat it sanely. In dealing with the drunken, we do not affect to be drunk. We must treat the sick with the same firmness, giving them, of course, every aid,—but withholding ourselves. I once asked a clergyman in a retired town who were his companions? what men of ability he saw? He replied, that he spent his time with the sick and the dying. I said, he seemed to me to need quite other company, and all the more that he had this: for if people were sick and dying to any purpose, we would leave all, and go to them, but, as far as I had observed, they were as frivolous as the rest, and sometimes much more frivolous. Let us engage our companions not to spare us. I knew a wise woman who said to her friends, "When I am old, rule me." And the best part of health is fine disposition. It is more essential than talent, even in the works of talent. Nothing will supply the want of sunshine to peaches, and, to make knowledge valuable, you must have the cheerfulness of wisdom. Whenever you are sincerely pleased, you are nourished. The joy of the spirit indicates its strength. All healthy things are sweet-tempered. Genius works in sport, and goodness smiles to the last; and for the reason, that whoever sees the law which distributes things does not despond, but is animated to great desires and endeavours. He who desponds betrays that he has not seen it.

'Tis a Dutch proverb, that "paint costs nothing," such are its preserving qualities in damp climates. Well, sunshine
costs less, yet is finer pigment. And so of cheerfulness, or a good temper—the more it is spent, the more of it remains. The latent heat of an ounce of wood or stone is inexhaustible. You may rub the same chip of pine to the point of kindling, a hundred times; and the power of happiness of any soul is not to be computed or drained. It is observed that a depression of spirits develops the germs of a plague in individuals and nations.

It is an old commendation of right behaviour, "Aliis laetus, sapiens sibi," which our English proverb translates, "Be merry and wise." I know how easy it is to men of the world to look grave and sneer at your sanguine youth, and its glittering dreams. But I find the gayest castles in the air that were ever piled far better, for comfort and for use, than the dungeons in the air that are daily dug and caverned out by grumbling, discontented people. I know those miserable fellows, and I hate them, who see a black star always riding through the light and coloured clouds in the sky overhead: waves of light pass over and hide it for a moment, but the black star keeps fast in the zenith. But power dwells with cheerfulness; hope puts us in a working mood, whilst despair is no muse, and untunes the active powers. A man should make life and nature happier to us, or he had better never been born. When the political economist reckons up the unproductive classes, he should put at the head this class of pitiers of themselves, cravers of sympathy, bewailing imaginary disasters. An old French verse runs, in my translation:

"Some of your griefs you have cured,  
And the sharpest you still have survived;  
But what torments of pain you endured  
From evils that never arrived!"

There are three wants which never can be satisfied: that of the rich, who wants something more; that of the sick, who wants something different; and that of the traveller, who says, "Anywhere but here." The Turkish cadi said to Layard, "After the fashion of thy people, thou hast wandered from one place to another, until thou art happy and content in none." My countrymen are not less infatuated with the rococo toy of Italy. All America seems on the point of embarking for Europe. But we shall not always traverse seas and lands with light purposes, and for pleasure, as we say. One day we shall cast out the passion for Europe, by the
passion for America. Culture will give gravity and domestic rest to those who now travel only as not knowing how else to spend money. Already, who provoke pity like that excellent family party just arriving in their well-appointed carriage, as far from home and any honest end as ever? Each nation has asked successively, "What are they here for?" until at last the party are shamefaced, and anticipate the question at the gates of each town.

Genial manners are good, and power of accommodation to any circumstance, but the high prize of life, the crowning fortune of a man, is to be born with a bias to some pursuit, which finds him in employment and happiness,—whether it be to make caskets, or broadswords, or canals, or statues, or songs. I doubt not this was the meaning of Socrates, when he pronounced artists the only truly wise, as being actually, not apparently so.

In childhood, we fancied ourselves walled in by the horizon, as by a glass bell, and doubted not, by distant travel, we should reach the baths of the descending sun and stars. On experiment, the horizon flies before us, and leaves us on an endless common, sheltered by no glass bell. Yet 'tis strange how tenaciously we cling to that bell-astronomy of a protecting domestic horizon. I find the same illusion in the search after happiness, which I observe, every summer, recommenced in this neighbourhood, soon after the pairing of the birds. The young people do not like the town, do not like the sea-shore, they will go inland; find a dear cottage deep in the mountains, secret as their hearts. They set forth on their travels in search of a home: they reach Berkshire; they reach Vermont; they look at the farms;—good farms, high mountain-sides: but where is the seclusion? The farm is near this; 'tis near that; they have got far from Boston, but 'tis near Albany, or near Burlington, or near Montreal. They explore a farm, but the house is small, old, thin; discontented people lived there, and are gone:—there's too much sky, too much out-doors; too public. The youth aches for solitude. When he comes to the house, he passes through the house. That does not make the deep recess he sought. "Ah! now, I perceive," he says, "it must be deep with persons; friends only can give depth." Yes, but there is a great dearth, this year, of friends; hard to find, and hard to have when found: they are just going away: they too are in the whirl of the flitting world, and have engagements
and necessities. They are just starting for Wisconsin; have letters from Bremen:—see you again, soon. Slow, slow to learn the lesson, that there is but one depth, but one interior, and that is—his purpose. When joy or calamity or genius shall show him it, then woods, then farms, then city shopmen and cab-drivers, indifferently with prophet or friend, will mirror back to him its unfathomable heaven, its populous solitude.

The uses of travel are occasional, and short; but the best fruit it finds, when it finds it, is conversation; and this is a main function of life. What a difference in the hospitality of minds! Inestimable is he to whom we can say what we cannot say to ourselves. Others are involuntarily hurtful to us, and bereave us of the power of thought, impound and imprison us. As, when there is sympathy, there needs but one wise man in a company, and all are wise,—so, a block-head makes a blockhead of his companion. Wonderful power to benumb possesses this brother. When he comes into the office or public room, the society dissolves; one after another slips out, and the apartment is at his disposal. What is incurable but a frivolous habit? A fly is as untamable as a hyena. Yet folly in the sense of fun, fooling, or dawdling, can easily be borne; as Talleyrand said, "I find nonsense singularly refreshing;" but a virulent, aggressive fool taints the reason of a household. I have seen a whole family of quiet, sensible people unhinged and beside themselves, victims of such a rogue. For the steady wrongheadedness of one perverse person irritates the best; since we must withstand absurdity. But resistance only exasperates the acrid fool, who believes that nature and gravitation are quite wrong, and he only is right. Hence all the dozen inmates are soon perverted, with whatever virtues and industries they have, into contradictors, accusers, explainers, and repairers of this one malefactor; like a boat about to be overset, or a carriage run away with,—not only the foolish pilot or driver, but everybody on board, is forced to assume strange and ridiculous attitudes, to balance the vehicle and prevent the upsetting. For remedy, whilst the case is yet mild, I recommend phlegm and truth: let all the truth that is spoken or done be at the zero of indifferency, or truth itself will be folly. But, when the case is seated and malignant, the only safety is in amputation; as seamen say, you shall cut and run. How to live with unfit companions?—for, with such, life is
for the most part spent: and experience teaches little better than our earliest instinct of self-defence, namely, not to engage, not to mix yourself in any manner with them; but let their madness spend itself unopposed;—you are you, and I am I.

Conversation is an art in which a man has all mankind for his competitors, for it is that which all are practising every day while they live. Our habit of thought,—take men as they rise,—is not satisfying; in the common experience, I fear, it is poor and squalid. The success which will content them is a bargain, a lucrative employment, an advantage gained over a competitor, a marriage, a patrimony, a legacy, and the like. With these objects, their conversation deals with surfaces: politics, trade, personal defects, exaggerated bad news, and the rain. This is forlorn, and they feel sore and sensitive. Now, if one comes who can illuminate this dark house with thoughts, show them their native riches, what gifts they have, how indispensable each is, what magical powers over nature and men; what access to poetry, religion, and the powers which constitute character: he wakes in them the feeling of worth; his suggestions require new ways of living, new books, new men, new arts and sciences,—then we come out of our egg-shell existence into the great dome, and see the zenith over and the nadir under us. Instead of the tanks and buckets of knowledge to which we are daily confined, we come down to the shore of the sea, and dip our hands in its miraculous waves. 'Tis wonderful the effect on the company. They are not the men they were. They have all been to California, and all have come back millionaires. There is no book and no pleasure in life comparable to it. Ask what is best in our experience, and we shall say, a few pieces of plain dealing with wise people. Our conversation once and again has apprised us that we belong to better circles than we have yet beheld; that a mental power invites us, whose generalisations are more worth for joy and for effect than anything that is now called philosophy or literature. In excited conversation, we have glimpses of the universe, hints of power native to the soul, far-darting lights and shadows of an Andes landscape, such as we can hardly attain in lone meditation. Here are oracles sometimes profusely given, to which the memory goes back in barren hours.

Add the consent of will and temperament, and there exists the covenant of friendship. Our chief want in life is,
sombody who shall make us do what we can. This is the service of a friend. With him we are easily great. There is a sublime attraction in him to whatever virtue is in us. How he flings wide the doors of existence! What questions we ask of him! what an understanding we have! how few words are needed! It is the only real society. An Eastern poet, Ali Ben Abu Taleb, writes with sad truth—

"He who has a thousand friends has not a friend to spare,
And he who has one enemy shall meet him everywhere."

But few writers have said anything better to this point than Hafiz who indicates this relation as the test of mental health: "Thou learnest no secret until thou knowest friendship, since to the unsound no heavenly knowledge enters." Neither is life long enough for friendship. That is a serious and majestic affair, like a royal presence, or a religion, and not a postilion's dinner to be eaten on the run. There is a pudency about friendship, as about love, and though fine souls never lose sight of it, yet they do not name it. With the first class of men our friendship or good understanding goes quite behind all accidents of estrangement, of condition, of reputation. And yet we do not provide for the greatest good of life. We take care of our health; we lay up money; we make our roof tight, and our clothing sufficient; but who provides wisely that he shall not be wanting in the best property of all,—friends? We know that all our training is to fit us for this, and we do not take the step towards it. How long shall we sit and wait for these benefactors?

It makes no difference, in looking back five years, how you have been dieted or dressed; whether you have been lodged on the first floor or the attic; whether you have had gardens and baths, good cattle and horses, have been carried in a neat equipage, or in a ridiculous truck: these things are forgotten so quickly, and leave no effect. But it counts much whether we have had good companions in that time;—almost as much as what we have been doing. And see the overpowering importance of neighbourhood in all association. As it is marriage, fit or unfit, that makes our home, so it is who lives near us of equal social degree,—a few people at convenient distance, no matter how bad company,—these, and these only, shall be your life's companions; and all those who are native, congenial, and by many an oath of the heart sacramented to you, are gradually and totally lost.
You cannot deal systematically with this fine element of society, and one may take a good deal of pains to bring people together, and to organise clubs and debating societies, and yet no result come of it. But it is certain that there is a great deal of good in us that does not know itself, and that a habit of union and competition brings people up and keeps them up to their highest point; that life would be twice or ten times life, if spent with wise and fruitful companions. The obvious inference is, a little useful deliberation and pre-concert, when one goes to buy house and land.

But we live with people on other platforms; we live with dependents, not only with the young whom we are to teach all we know, and clothe with the advantages we have earned, but also with those who serve us directly, and for money. Yet the old rules hold good. Let not the tie be mercenary, though the service is measured by money. Make yourself necessary to somebody. Do not make life hard to any. This point is acquiring new importance in American social life. Our domestic service is usually a foolish fracas of unreasonable demand on one side, and shirking on the other. A man of wit was asked, in the train, what was his errand, in the city? He replied, "I have been sent to procure an angel to do cooking." A lady complained to me, that, of her two maidens, one was absent-minded, and the other was absent-bodied. And the evil increases from the ignorance and hostility of every ship-load of the immigrant population swarming into houses and farms. Few people discern that it rests with the master or the mistress what service comes from the man or the maid; that this identical hussy was a tutelar spirit in one house, and a haridan in the other. All sensible people are selfish, and nature is tugging at every contract to make the terms of it fair. If you are proposing only your own, the other party must deal a little hardly by you. If you deal generously, the other, though selfish and unjust, will make an exception in your favour, and deal truly with you. When I asked an iron-master about the slag and cinder in railroad iron,—"Oh," he said, "there's always good iron to be had: if there's cinder in the iron, 'tis because there was cinder in the pay."

But why multiply these topics, and their illustrations, which are endless? Life brings to each his task, and, whatever art you select, algebra, planting, architecture, poems, commerce, politics,—all are attainable, even to the mira-
culous triumphs, on the same terms, of selecting that for which you are apt;—begin at the beginning, proceed in order, step by step. 'Tis as easy to twist iron anchors, and braid cannons, as to braid straw; to boil granite as to boil water, if you take all the steps in order. Wherever there is failure, there is some giddiness, some superstition about luck, some step omitted, which nature never pardons. The happy conditions of life may be had on the same terms. Their attraction for you is the pledge that they are within your reach. Our prayers are prophets. There must be fidelity, and there must be adherence. How respectable the life that clings to its objects! Youthful aspirations are fine things, your theories and plans of life are fair and commendable:—but will you stick? Not one, I fear, in that Common full of people, or in a thousand, but one: and, when you tax them with treachery, and remind them of their high resolutions, they have forgotten that they made a vow. The individuals are fugitive, and in the act of becoming something else, and irresponsible. The race is great, the ideal fair, but the men whistling and unsure. The hero is he who is immovably centred. The main difference between people seems to be, that one man can come under obligations on which you can rely,—is obligable; and another is not. As he has not a law within him, there's nothing to tie him to.

'Tis inevitable to name particulars of virtue, and of condition, and to exaggerate them. But all rests at last on that integrity which dwarfs talent, and can spare it. Sanity consists in not being subdued by your means. Fancy prices are paid for position, and for the culture of talent, but to the grand interests, superficial success is of no account. The man,—it is his attitude,—not feats, but forces,—not on set days and public occasions, but at all hours, and in repose alike as in energy, still formidable, and not to be disposed of. The populace says, with Horne Tooke, "If you would be powerful, pretend to be powerful." I prefer to say, with the old prophet, "Seeketh thou great things? seek them not:" —or, what was said of a Spanish prince, "The more you took from him, the greater he looked." Plus on lui ôte, plus il est grand.

The secret of culture is to learn, that a few great points steadily reappear, alike in the poverty of the obscurest farm, and in the miscellany of metropolitan life, and that these few are alone to be regarded,—the escape from all false ties;
courage to be what we are; and love of what is simple and beautiful; independence, and cheerful relation—these are the essentials,—these, and the wish to serve,—to add somewhat to the well-being of men.

VIII.—BEAUTY

Was never form and never face
So sweet to see as only grace,
Which did not slumber like a stone
But hovered gleaming and was gone.
Beauty chased he everywhere,
In flame, in storm, in clouds of air.
He smote the lake to feed his eye
With the beryl beam of the broken wave;
He flung in pebbles well to hear
The moment's music which they gave.
Oft pealed for him a lofty tone
From nodding pole and belting zone.
He heard a voice none else could hear
From centred and from errant sphere.
The quaking earth did quake in rhyme,
Seas ebbed and flowed in epic chime.
In dens of passion, and pits of woe,
He saw strong Eros struggling through,
To sun the dark and solve the curse,
And beam to the bounds of the universe.
While thus to love he gave his days
In loyal worship, scorning praise,
How spread their lures for him, in vain,
Thieving Ambition and paltering Gain!
He thought it happier to be dead,
To die for Beauty, than live for bread.

The spiral tendency of vegetation infects education also. Our books approach very slowly the things we most wish to know. What a parade we make of our science, and how far off, and at arm's length, it is from its objects! Our botany is all names, not powers: poets and romancers talk of herbs of grace and healing; but what does the botanist know of the virtues of his weeds? The geologist lays bare the strata, and can tell them all on his fingers: but does he know what effect passes into the man who builds his house in them? what effect on the race that inhabits a granite shelf? what on the inhabitants of marl and of alluvium?

We should go to the ornithologist with a new feeling, if he could teach us what the social birds say, when they sit in the autumn council, talking together in the trees. The want of sympathy makes his record a dull dictionary. His result
We are just as frivolous and sceptical. Men hold themselves cheap and vile: and yet a man is a fagot of thunderbolts. All the elements pour through his system: he is the flood of the flood, and fire of the fire; he feels the antipodes and the pole, as drops of his blood: they are the extension of his personality. His duties are measured by that instrument he is; and a right and perfect man would be felt to the centre of the Copernican system. 'Tis curious that we only believe as deep as we live. We do not think heroes can exert any more awful power than that surface-play which amuses us. A deep man believes in miracles, waits for them, believes in magic, believes that the orator will decompose his adversary; believes that the evil eye can wither, that the heart's blessing can heal; that love can exalt talent; can overcome all odds. From a great heart secret magnetisms flow incessantly to draw great events. But we prize very humble utilities, a prudent husband, a good son, a voter, a citizen, and deprecate any romance of character; and perhaps
reckon only his money value,—his intellect, his affection, as a sort of bill of exchange, easily convertible into fine chambers, pictures, music, and wine.

The motive of science was the extension of man, on all sides, into nature, till his hands should touch the stars, his eyes see through the earth, his ears understand the language of beast and bird, and the sense of the wind; and, through his sympathy, heaven and earth should talk with him. But that is not our science. These geologies, chemistries, astronomies, seem to make wise, but they leave us where they found us. The invention is of use to the inventor, of questionable help to any other. The formulas of science are like the papers in your pocket-book, of no value to any but the owner. Science in England, in America, is jealous of theory, hates the name of love and moral purpose. There's a revenge for this inhumanity. What manner of man does science make? The boy is not attracted. He says, I do not wish to be such a kind of man as my professor is. The collector has dried all the plants in his herbal, but he has lost weight and humour. He has got all snakes and lizards in his phials, but science had done for him also, and has put the man into a bottle. Our reliance on the physician is a kind of despair of ourselves. The clergy have bronchitis, which does not seem a certificate of spiritual health. Macready thought it came of the falsetto of their voicing. An Indian prince, Tisso, one day riding in the forest, saw a herd of elk sporting. "See how happy," he said, "these browsing elks are! Why should not priests, lodged and fed comfortably in the temples, also amuse themselves?" Returning home, he imparted this reflection to the king. The king, on the next day, conferred the sovereignty on him, saying, "Prince, administer this empire for seven days: at the termination of that period I shall put thee to death." At the end of the seventh day, the king inquired, "From what cause hast thou become so emaciated?" He answered, "From the horror of death." The monarch rejoined, "Live, my child, and be wise. Thou hast ceased to take recreation, saying to thyself, In seven days I shall be put to death. These priests in the temple incessantly meditate on death; how can they enter into healthful diversions?" But the men of science or the doctors or the clergy are not victims of their pursuits, more than others. The miller, the lawyer, and the merchant, dedicate themselves to their own details, and do not come
out men of more force. Have they divination, grand aims, hospitality of soul, and the equality to any event, which we demand in man, or only the reactions of the mill, of the wares, of the chicane?

No object really interests us but man, and in man only his superiorities; and, though we are aware of a perfect law in nature, it has fascination for us only through its relation to him, or as it is rooted in the mind. At the birth of Winckelmann, more than a hundred years ago, side by side with this arid, departmental, post mortem science, rose an enthusiasm in the study of Beauty; and perhaps some sparks from it may yet light a conflagration in the other. Knowledge of men, knowledge of manners, the power of form, and our sensibility to personal influence, never go out of fashion. These are facts of a science which we study without book, whose teachers and subjects are always near us.

So inveterate is our habit of criticism, that much of our knowledge in this direction belongs to the chapter of pathology. The crowd in the street oftener furnishes degradations than angels or redeemers: but they all prove the transparency. Every spirit makes its house; and we can give a shrewd guess from the house to the inhabitant. But not less does nature furnish us with every sign of grace and goodness. The delicious faces of children, the beauty of school-girls, "the sweet seriousness of sixteen," the lofty air of well-born, well-bred boys, the passionate histories in the looks and manners of youth and early manhood, and the varied power in all that well-known company that escort us through life,—we know how these forms thrill, paralyse, provoke, inspire, and enlarge us.

Beauty is the form under which the intellect prefers to study the world. All privilege is that of beauty; for there are many beauties; as, of general nature, of the human face and form, of manners, of brain, or method, moral beauty, or beauty of the soul.

The ancients believed that a genius or demon took possession at birth of each mortal, to guide him: that these genii were sometimes seen as a flame of fire partly immersed in the bodies which they governed;—in an evil man, resting on his head; in a good man, mixed with his substance. They thought the same genius, at the death of its ward, entered a new-born child, and they pretended to guess the pilot by the sailing of the ship. We recognise obscurely the same fact,
though we give it our own names. We say, that every man is entitled to be valued by his best moment. We measure our friends so. We know, they have intervals of folly, where- of we take no heed, but wait the disappearances of the genius, which are sure and beautiful. On the other side, everybody knows people who appear beridden, and who, with all degrees of ability, never impress us with the air of free agency. They know it too, and peep with their eyes to see if you detect their sad plight. We fancy, could we pronounce the solving word, and disenchant them, the cloud would roll up, the little rider would be discovered and unseated, and they would regain their freedom. The remedy seems never to be far off, since the first step into thought lifts this mountain of necessity. Thought is the pent air-ball which can rive the planet, and the beauty which certain objects have for him is the friendly fire which expands the thought, and acquaints the prisoner that liberty and power await him.

The question of Beauty takes us out of surfaces, to thinking of the foundations of things. Goethe said, "The beautiful is a manifestation of secret laws of Nature, which, but for this appearance, had been for ever concealed from us." And the working of this deep instinct makes all the excitement—much of it superficial and absurd enough—about works of art, which leads armies of vain travellers every year to Italy, Greece, and Egypt. Every man values every acquisition he makes in the science of beauty, above his possessions. The most useful man in the most useful world, so long as only commodity was served, would remain unsatisfied. But as fast as he sees beauty, life acquires a very high value.

I am warned by the ill-fate of many philosophers not to attempt a definition of Beauty. I will rather enumerate a few of its qualities. We ascribe beauty to that which is simple; which has no superfluous parts; which exactly answers its end; which stands related to all things; which is the mean of many extremes. It is the most enduring quality, and the most ascending quality. We say, love is blind, and the figure of Cupid is drawn with a bandage round his eyes. Blind:—yes, because he does not see what he does not like; but the sharpest-sighted hunter in the universe is Love, for finding what he seeks, and only that; and the mythologists tell us, that Vulcan was painted lame, and Cupid blind, to call attention to the fact, that one was all limbs and the other all eyes. In the true mythology, Love is an
immortal child, and Beauty leads him as a guide: nor can we express a deeper sense than when we say, Beauty is the pilot of the young soul.

Beyond their sensuous delight, the forms and colours of nature have a new charm for us in our perception, that not one ornament was added for ornament, but is a sign of some better health, or more excellent action. Elegance of form in bird or beast, or in the human figure, marks some excellence of structure: or beauty is only an invitation from what belongs to us. 'Tis a law of botany, that in plants, the same virtues follow the same forms. It is a rule of largest application, true in a plant, true in a loaf of bread, that in the construction of any fabric or organism any real increase of fitness to its end is an increase of beauty.

The lesson taught by the study of Greek and of Gothic art, of antique and of pre-Raphaelite painting, was worth all the research,—namely, that all beauty must be organic; that outside embellishment is deformity. It is the soundness of the bones that ultimates itself in a peach-bloom complexion: health of constitution that makes the sparkle and the power of the eye. 'Tis the adjustment of the size and of the joining of the sockets of the skeleton, that gives grace of outline and the finer grace of movement. The cat and the deer cannot move or sit inelegantly. The dancing-master can never teach a badly built man to walk well. The tint of the flower proceeds from its root, and the lustres of the sea-shell begin with its existence. Hence our taste in building rejects paint, and all shifts, and shows the original grain of the wood: refuses pilasters and columns that support nothing, and allows the real supporters of the house honestly to show themselves. Every necessary or organic action pleases the beholder. A man leading a horse to water, a farmer sowing seed, the labours of hay-makers in the field, the carpenter building a ship, the smith at his forge or whatever useful labour is becoming to the wise eye. But if it is done to be seen, it is mean. How beautiful are ships on the sea! but ships in the theatre,—or ships kept for picturesque effect on Virginia Water, by George IV., and men hired to stand in fitting costumes at a penny an hour!—What a difference in effect between a battalion of troops marching to action, and one of our independent companies on a holiday! In the midst of a military show, and a festal procession gay with banners, I saw a boy seize an old tin pan that lay rusting
under a wall, and poising it on the top of a stick; he set it turning, and made it describe the most elegant imaginable curves, and drew away attention from the decorated procession by this startling beauty.

Another text from the mythologists. The Greeks fabled that Venus was born of the foam of the sea. Nothing interests us which is stark or bounded, but only what streams with life, what is in act or endeavour to reach somewhat beyond. The pleasure a palace or a temple gives the eye is that an order and method has been communicated to stones, so that they speak and geometrise, become tender or sublime with expression. Beauty is the moment of transition, as if the form were just ready to flow into other forms. Any fixedness, heaping, or concentration on one feature,—a long nose, a sharp chin, a hump-back,—is the reverse of the flowing, and therefore deformed. Beautiful as is the symmetry of any form, if the form can move, we seek a more excellent symmetry. The interruption of equilibrium stimulates the eye to desire the restoration of symmetry, and to watch the steps through which it is attained. This is the charm of running water, sea-waves, the flight of birds, and the locomotion of animals. This is the theory of dancing, to recover continually in changes the lost equilibrium, not by abrupt and angular, but by gradual and curving movements. I have been told by persons of experience in matters of taste, that the fashions follow a law of gradation, and are never arbitrary. The new mode is always only a step onward in the same direction as the last mode; and a cultivated eye is prepared for and predicts the new fashion. This fact suggests the reason of all mistakes and offence in our own modes. It is necessary in music, when you strike a discord, to let down the ear by an intermediate note or two to the accord again: and many a good experiment, born of good sense, and destined to succeed, fails, only because it is offensively sudden. I suppose the Parisian milliner who dresses the world from her imperious boudoir will know how to reconcile the Bloomer costume to the eye of mankind, and make it triumphant over Punch himself, by interposing the just gradations. I need not say, how wide the same law ranges, and how much it can be hoped to effect. All that is a little harshly claimed by progressive parties, may easily come to be conceded without question, if this rule be observed. Thus the circumstances may be easily imagined, in
which woman may speak, vote, argue causes, legislate, and drive a coach, and all the most naturally in the world, if only it come by degrees. To this streaming or flowing belongs the beauty that all circular movement has; as, the circulation of waters, the circulation of the blood, the periodic motion of planets, the annual wave of vegetation, the action and reaction of nature: and, if we follow it out, this demand in our thought for an ever-onward action is the argument for the immortality.

One more text from the mythologists is to the same purpose,—Beauty rides on a lion. Beauty rests on necessities. The line of beauty is the result of perfect economy. The cell of the bee is built at that angle which gives the most strength with the least wax; the bone or the quill of the bird gives the most alar strength with the least weight. "It is the purgation of superfluities," said Michael Angelo. There is not a particle to spare in natural structures. There is a compelling reason in the uses of the plant, for every novelty of colour or form: and our art saves material, by more skilful arrangement, and reaches beauty by taking every superfluous ounce that can be spared from a wall, and keeping all its strength in the poetry of columns. In rhetoric, this art of omission is a chief secret of power, and, in general, it is proof of high culture to say the greatest matters in the simplest way.

Veracity first of all, and for ever. Rien de beau que le vrai. In all design, art lies in making your object prominent, but there is a prior art in choosing objects that are prominent. The fine arts have nothing casual, but spring from the instincts of the nations that created them.

Beauty is the quality which makes to endure. In a house that I know, I have noticed a block of spermaceti lying about closets and mantelpieces, for twenty years together, simply because the tallowman gave it the form of a rabbit; and, I suppose, it may continue to be lugged about unchanged for a century. Let an artist scrawl a few lines or figures on the back of a letter, and that scrap of paper is rescued from danger, is put in portfolio, is framed and glazed, and, in proportion to the beauty of the lines drawn, will be kept for centuries. Burns writes a copy of verses, and sends them to a newspaper, and the human race take charge of them that they shall not perish.

As the flute is heard farther than the cart, see how surely
a beautiful form strikes the fancy of men, and is copied and reproduced without end. How many copies are there of the Belvedere Apollo, the Venus, the Psyche, the Warwick Vase, the Parthenon, and the Temple of Vesta! These are objects of tenderness to all. In our cities, an ugly building is soon removed, and is never repeated, but any beautiful building is copied and improved upon, so that all masons and carpenters work to repeat and preserve the agreeable forms, whilst the ugly ones die out.

The felicities of design in art, or in works of nature, are shadows or forerunners of that beauty which reaches its perfection in the human form. All men are its lovers. Wherever it goes, it creates joy and hilarity, and everything is permitted to it. It reaches its height in woman. "To Eve," say the Mahometans, "God gave two-thirds of all beauty." A beautiful woman is a practical poet, taming her savage mate, planting tenderness, hope, and eloquence, in all whom she approaches. Some favours of condition must go with it, since a certain serenity is essential, but we love its reproofs and superiorities. Nature wishes that woman should attract man, yet she often cunningly moulds into her face a little sarcasm, which seems to say, "Yes, I am willing to attract, but to attract a little better kind of a man than any I yet behold." French mémoires of the fifteenth century celebrate the name of Pauline de Viguiere, a virtuous and accomplished maiden, who so fired the enthusiasm of her contemporaries by her enchanting form, that the citizens of her native city of Toulouse obtained the aid of the civil authorities to compel her to appear publicly on the balcony at least twice a week, and, as often as she showed herself, the crowd was dangerous to life. Not less, in England, in the last century, was the fame of the Gunnings, of whom Elizabeth married the Duke of Hamilton, and Maria the Earl of Coventry. Walpole says, "The concourse was so great when the Duchess of Hamilton was presented at court, on Friday, that even the noble crowd in the drawing-room clambered on chairs and tables to look at her. There are mobs at their doors to see them get into their chairs, and people go early to get places at the theatres, when it is known they will be there." "Such crowds," he adds elsewhere, "flock to see the Duchess of Hamilton, that seven hundred people sat up all night, in and about an inn, in Yorkshire, to see her get into her post-chaise next morning."
But why need we console ourselves with the fames of Helen of Argos, or Corinna, or Pauline of Toulouse, or the Duchess of Hamilton? We all know this magic very well, or can divine it. It does not hurt weak eyes to look into beautiful eyes never so long. Women stand related to beautiful Nature around us, and the enamoured youth mixes their form with moon and stars, with woods and waters, and the pomp of summer. They heal us of awkwardness by their words and looks. We observe their intellectual influence on the most serious student. They refine and clear his mind; teach him to put a pleasing method into what is dry and difficult. We talk to them, and wish to be listened to; we fear to fatigue them, and acquire a facility of expression which passes from conversation into habit of style.

That Beauty is the normal state, is shown by the perpetual effort of Nature to attain it. Mirabeau had an ugly face on a handsome ground; and we see faces every day which have a good type, but have been marred in the casting: a proof that we are all entitled to beauty, should have been beautiful, if our ancestors had kept the laws,—as every lily and every rose is well. But our bodies do not fit us, but caricature and satirise us. Thus, short legs, which constrain us to short, mincing steps, are a kind of personal insult and contumely to the owner; and long stilts, again, put him at perpetual disadvantage, and force him to stoop to the general level of mankind. Martial ridicules a gentleman of his day whose countenance resembled the face of a swimmer seen under water. Saadi describes a schoolmaster "so ugly and crabbed, that a sight of him would derange the ecstasies of the orthodox." Faces are rarely true to any ideal type, but are a record in sculpture of a thousand anecdotes of whim and folly. Portrait painters say that most faces and forms are irregular and unsymmetrical; have one eye blue, and one gray; the nose not straight; and one shoulder higher than another; the hair unequally distributed, etc. The man is physically as well as metaphysically a thing of shreds and patches, borrowed unequally from good and bad ancestors, and a misfit from the start.

A beautiful person, among the Greeks, was thought to betray by this sign some secret favour of the immortal gods: and we can pardon pride, when a woman possesses such a figure, that wherever she stands, or moves, or leaves a shadow on the wall, or sits for a portrait to the artist, she
confers a favour on the world. And yet—it is not beauty that inspires the deepest passion. Beauty without grace is the hook without the bait. Beauty without expression tires. Abbé Ménage said of the President Le Bailleul, "that he was fit for nothing but to sit for his portrait." A Greek epigram intimates that the force of love is not shown by the courting of beauty, but when the like desire is inflamed for one who is ill-favoured. And petulant old gentlemen, who have chanced to suffer some intolerable weariness from pretty people, or who have seen cut flowers to some profusion, or who see, after a world of pains have been successfully taken for the costume, how the least mistake in sentiment takes all the beauty out of your clothes,—affirm, that the secret of ugliness consists not in irregularity, but in being uninteresting.

We love any forms, however ugly, from which great qualities shine. If command, eloquence, art, or invention, exist in the most deformed person, all the accidents that usually displease, please, and raise esteem and wonder higher. The great orator was an emaciated, insignificant person, but he was all brain. Cardinal De Retz says of De Bouillon, "With the physiognomy of an ox, he had the perspicacity of an eagle." It was said of Hooke, the friend of Newton, "He is the most, and promises the least, of any man in England." "Since I am so ugly," said Du Guesclin, "it behooves that I be bold." Sir Philip Sidney, the darling of mankind, Ben Jonson tells us, "was no pleasant man in countenance, his face being spoiled with pimples, and of high blood, and long." Those who have ruled human destinies, like planets, for thousands of years, were not handsome men. If a man can raise a small city to be a great kingdom, can make bread cheap, can irrigate deserts, can join oceans by canals, can subdue steam, can organise victory, can lead the opinions of mankind, can enlarge knowledge, 'tis no matter whether his nose is parallel to his spine, as it ought to be, or whether he has a nose at all; whether his legs are straight, or whether his legs are amputated; his deformities will come to be reckoned ornamental, and advantageous on the whole. This is the triumph of expression, degrading beauty, charming us with a power so fine and friendly and intoxicating, that it makes admired persons insipid, and the thought of passing our lives with them insupportable. There are faces so fluid with expression, so flushed and rippled by the play of thought, that
we can hardly find what the mere features really are. When
the delicious beauty of lineaments loses its power, it is
because a more delicious beauty has appeared; that an
interior and durable form has been disclosed. Still, Beauty
rides on her lion, as before. Still, "it was for beauty that
the world was made." The lives of the Italian artists, who
established a despotism of genius amidst the dukes and
kings and mobs of their stormy epoch, prove how loyal men
in all times are to a finer brain, a finer method, than their
own. If a man can cut such a head on his stone gate-post as
shall draw and keep a crowd about it all day, by its beauty,
good nature, and inscrutable meaning—if a man can build a
plain cottage with such symmetry, as to make all the fine
palaces look cheap and vulgar; can take such advantage of
Nature that all her powers serve him; making use of geo-
metry instead of expense; tapping a mountain for his water-
jet; causing the sun and moon to seem only the decorations
of his estate;—this is still the legitimate dominion of Beauty.

The radiance of the human form, though sometimes
astonishing, is only a burst of beauty for a few years or a
few months, at the perfection of youth, and in most, rapidly
debutes. But we remain lovers of it, only transferring our
interest to interior excellence. And it is not only admirable
in singular and salient talents, but also in the world of
manners.

But the sovereign attribute remains to be noted. Things
are pretty, graceful, rich, elegant, handsome, but, until they
speak to the imagination, not yet beautiful. This is the
reason why beauty is still escaping out of all analysis. It is
not yet possessed, it cannot be handled. Proclus says, "it
swims on the light of forms." It is properly not in the form,
but in the mind. It instantly deserts possession and flies to
an object in the horizon. If I could put my hand on the
north star, would it be as beautiful? The sea is lovely, but
when we bathe in it, the beauty forsakes all the near water.
For the imagination and senses cannot be gratified at the
same time. Wordsworth rightly speaks of "a light that
never was on sea or land," meaning, that it was supplied by
the observer, and the Welsh bard warns his countrywomen
that

"... half of their charms with Cadwallon shall die."
The new virtue which constitutes a thing beautiful, is a
certain cosmical quality, or a power to suggest relation to the
whole world, and so lift the object out of a pitiful individuality. Every natural feature,—sea, sky, rainbow, flowers, musical tone,—has in it somewhat which is not private, but universal, speaks of that central benefit which is the soul of Nature, and thereby is beautiful. And, in chosen men and women, I find somewhat in form, speech, and manners, which is not of their person and family, but of a humane, catholic, and spiritual character, and we love them as the sky. They have a largeness of suggestion, and their face and manners carry a certain grandeur, like time and justice.

The feat of the imagination is in showing the convertibility of everything into every other thing. Facts which had never before left their stark common sense, suddenly figure as Eleusinian mysteries. My boots and chair and candlestick are fairies in disguise, meteors and constellations. All the facts in Nature are nouns of the intellect, and make the grammar of the eternal language. Every word has a double, treble, or centuple use and meaning. What! has my stove and pepper-pot a false bottom! I cry you mercy, good shoe-box! I did not know you were a jewel-case. Chaff and dust begin to sparkle, and are clothed about with immortality. And there is a joy in perceiving the representative or symbolic character of a fact, which no bare fact or event can ever give. There are no days in life so memorable as those which vibrated to some stroke of the imagination.

The poets are quite right in deckling their mistresses with the spoils of the landscape, flower-gardens, gems, rainbows, flushes of morning, and stars of night, since all beauty points at identity, and whatsoever thing does not express to me the sea and sky, day and night, is somewhat forbidden and wrong. Into every beautiful object there enters somewhat immeasurable and divine, and just as much into form bounded by outlines, like mountains on the horizon, as into tones of music, or depths of space. Polarised light showed the secret architecture of bodies; and when the second sight of the mind is opened, now one colour or form or gesture, and now another, has a pungency, as if a more interior ray had been emitted, disclosing its deep holdings in the frame of things.

The laws of this translation we do not know, or why one feature or gesture enchants, why one word or syllable intoxicates, but the fact is familiar that the fine touch of the eye, or a grace of manners, or a phrase of poetry, plants wings at our shoulders; as if the Divinity, in his approaches, lifts
away mountains of obstruction, and deigns to draw a truer line, which the mind knows and owns. This is that haughty force of beauty, "vis superba formæ," which the poets praise,—under calm and precise outline, the immeasurable and divine: Beauty hiding all wisdom and power in its calm sky.

All high beauty has a moral element in it, and I find the antique sculpture as ethical as Marcus Antoninus: and the beauty ever in proportion to the depth of thought. Gross and obscure nature, however decorated, seem impure shambles; but character gives splendour to youth, and awe to wrinkled skin and gray hairs. An adorer of truth we cannot choose but obey, and the woman who has shared with us the moral sentiment,—her locks must appear to us sublime. Thus there is a climbing scale of culture, from the first agreeable sensation which a sparkling gem or a scarlet stain affords the eye, up through fair outlines and details of the landscape, features of the human face and form, signs and tokens of thought and character in manners, up to the ineffable mysteries of the intellect. Wherever we begin, thither our steps tend: an ascent from the joy of a horse in his trappings, up to the perception of Newton, that the globe on which we ride is only a larger apple falling from a larger tree; up to the perception of Plato, that globe and universe are rude and early expressions of an all-dissolving Unity,—the first stair on the scale to the temple of the Mind.

IX.—ILLUSIONS

Flow, flow the waves hated,
Accursed, adored,
The waves of mutation:
No anchorage is.
Sleep is not, death is not;
Who seem to die, live.
House you were born in,
Friends of your spring-time,
Old man and young maid,
Day's toil and its guerdon—
They are all vanishing,
Fleeing to fables,
Cannot be moored.
See the stars through them,
Through treacherous marbles.
Know, the stars yonder,
The stars everlasting,
Are fugitive also,
And emulate, vaulted,
The lambent heat-lightning,
And fire-fly's flight.

When thou dost return
On the wave's circulation,
Beholding the shimmer,
The will's dissipation,
And, out of endeavour
To change and to flow,
The gas become solid,
And phantoms and nothings
Return to be things.
And endless imbroglio
Is law and the world,—
Then first shalt thou know,
That in the wild turmoil,
Horsed on the Proteus,
Thou ridest to power,
And to endurance.

Some years ago, in company with an agreeable party, I spent a long summer day in exploring the Mammoth Cave in Kentucky. We traversed, through spacious galleries affording a solid masonry foundation for the town and county overhead, the six or eight black miles from the mouth of the cavern to the innermost recess which tourists visit,—a niche or grotto made of one seamless stalactite and called, I believe, Serena's Bower. I lost the light of one day. I saw high domes, and bottomless pits; heard the voice of unseen waterfalls; paddled three quarters of a mile in the deep Echo River, whose waters are peopled with the blind fish; crossed the streams "Lethe" and "Styx;" plied with music and guns the echoes in these alarming galleries; saw every form of stalagmite and stalactite in the sculptured and fretted chambers,—icicle, orange-flower, acanthus, grapes, and snowball. We shot Bengal lights into the vaults and groins of the sparry cathedrals, and examined all the masterpieces which the four combined engineers, water, limestone, gravitation, and time, could make in the dark.

The mysteries and scenery of the cave had the same dignity that belongs to all natural objects, and which shames the fine things to which we foppishly compare them. I remarked, especially, the mimetic habit, with which Nature, on new instruments, hums her old tunes, making night to mimic day, and chemistry to ape vegetation. But I then took notice, and still chiefly remember, that the best thing which the cave had to offer was an illusion. On arriving at what is called the "Star Chamber," our lamps were taken from us by the
guide, and extinguished or put aside, and, on looking upwards, I saw or seemed to see the night heaven thick with stars glimmering more or less brightly over our heads, and even what seemed a comet flaming among them. All the party were touched with astonishment and pleasure. Our musical friends sung with much feeling a pretty song, "The stars are in the quiet sky," etc., and I sat down on the rocky floor to enjoy the serene picture. Some crystal specks in the black ceiling high overhead, reflecting the light of a half-hid lamp, yielded this magnificent effect.

I own, I did not like the cave so well for eking out its sublimities with this theatrical trick. But I have had many experiences like it, before and since; and we must be content to be pleased without too curiously analysing the occasions. Our conversation with Nature is not just what it seems. The cloud-rack, the sunrise and sunset glories, rainbows, and northern lights, are not quite so splanal as our childhood thought them; and the part our organisation plays in them is too large. The senses interfere everywhere, and mix their own structure with all they report of. Once, we fancied the earth a plane, and stationary. In admiring the sunset, we do not yet deduct the rounding, co-ordinating, pictorial powers of the eye.

The same interference from our organisation creates the most of our pleasure and pain. Our first mistake is the belief that the circumstance gives the joy which we give to the circumstance. Life is an ecstasy. Life is sweet as nitrous oxide; and the fisherman dripping all day over a cold pond, the switchman at the railway intersection, the farmer in the field, the negro in the rice-swamp, the fop in the street, the hunter in the woods, the barrister with the jury, the belle at the ball, all ascribe a certain pleasure to their employment, which they themselves give it. Health and appetite impart the sweetness to sugar, bread, and meat. We fancy that our civilisation has got on far, but we still come back to our primers.

We live by our imaginations, by our admirations, by our sentiments. The child walks amid heaps of illusions, which he does not like to have disturbed. The boy, how sweet to him is his fancy! how dear the story of barons and battles! What a hero he is, whilst he feeds on his heroes! What a debt is his to imaginative books! He has no better friend or influence than Scott, Shakespeare, Plutarch, and Homer.
The man lives to other objects, but who dare affirm that they are more real? Even the prose of the streets is full of refractions. In the life of the dreariest alderman, fancy enters into all details, and colours them with rosy hue. He imitates the air and actions of people whom he admires, and is raised in his own eyes. He pays a debt quicker to a rich man than to a poor man. He wishes the bow and compliment of some leader in the state, or in society; weighs what he says; perhaps he never comes nearer to him for that, but dies at last better contented for this amusement of his eyes and his fancy.

The world rolls, the din of life is never hushed. In London, in Paris, in Boston, in San Francisco, the carnival, the masquerade is at its height. Nobody drops his domino. The unities, the fictions of the piece, it would be an impertinence to break. The chapter of fascinations is very long. Great is paint; nay God is the painter; and we rightly accuse the critic who destroys too many illusions. Society does not love its unmaskers. It was wittily, if somewhat bitterly, said by D'Alembert, "qu'un état de vapeur était un état très fâcheux, parce qu'il nous faisait voir les choses comme elles sont." I find men victims of illusion in all parts of life. Children, youths, adults, and old men, all are led by one bauble or another. Yoganidra, the goddess of illusion, Proteus, or Momus, or Gylfi's Mocking,—for the Power has many names,—is stronger than the Titans, stronger than Apollo. Few have overheard the gods, or surprised their secret. Life is a succession of lessons which must be lived to be understood. All is riddle, and the key to a riddle is another riddle. There are as many pillows of illusion as flakes in a snow-storm. We wake from one dream into another dream. The toys, to be sure, are various, and are graduated in refinement to the quality of the dupe. The intellectual man requires a fine bait; the sots are easily amused. But everybody is drugged with his own frenzy, and the pageant marches at all hours, with music and banner and badge.

Amid the joyous troop who give in to the charivari, comes now and then a sad-eyed boy, whose eyes lack the requisite refractions to clothe the show in due glory, and who is afflicted with a tendency to trace home the glittering miscellany of fruits and flowers to one root. Science is a search after identity, and the scientific whim is lurking in all corners.
At the State Fair, a friend of mine complained that all the varieties of fancy pears in our orchards seem to have been selected by somebody who had a whim for a particular kind of pear, and only cultivated such as had that perfume; they were all alike. And I remember the quarrel of another youth with the confectioners, that, when he racked his wit to choose the best comfits in the shops, in all the endless varieties of sweetmeat he could only find three flavours, or two. What then? Pears and cakes are good for something; and because you, unluckily, have an eye or nose too keen, why need you spoil the comfort which the rest of us find in them? I knew a humorist who, in a good deal of rattle, had a grain or two of sense. He shocked the company by maintaining that the attributes of God were two,—power and risibility; and that it was the duty of every pious man to keep up the comedy. And I have known gentlemen of great stake in the community, but whose sympathies were cold,—presidents of colleges, and governors, and senators,—who held themselves bound to sign every temperance pledge, and act with Bible societies, and missions, and peacemakers, and cry Hist-a-boy! to every good dog. We must not carry comity too far, but we all have kind impulses in this direction. When the boys come into my yard for leave to gather horse-chestnuts, I own I enter into Nature's game, and affect to grant the permission reluctantly, fearing that any moment they will find out the imposture of that showy chaff. But this tenderness is quite unnecessary; the enchantments are laid on very thick. Their young life is thatched with them. Bare and grim to tears is the lot of the children in the hovel I saw yesterday; yet not the less they hung it round with frippery romance, like the children of the happiest fortune, and talked of "the dear cottage where so many joyful hours had flown." Well, this thatching of hovels is the custom of the country. Women, more than all, are the element and kingdom of illusion. Being fascinated, they fascinate. They see through Claude-Lorraines. And how dare any one, if he could, pluck away the coulisses, stage effects, and ceremonies, by which they live? Too pathetic, too pitiable, is the region of affection, and its atmosphere always liable to mirage.

We are not very much to blame for our bad marriages. We live amid hallucinations; and this especial trap is laid to trip up our feet with, and all are tripped up first or last.
But the mighty Mother who had been so sly with us, as if she felt that she owed us some indemnity, insinuates into the Pandora-box of marriage some deep and serious benefits, and some great joys. We find a delight in the beauty and happiness of children, that makes the heart too big for the body. In the worst-assorted connections there is ever some mixture of true marriage. Teague and his jade get some just relations of mutual respect, kindly observation, and fostering of each other, learn something, and would carry themselves wiselier, if they were now to begin.

'Tis fine for us to point at one or another fine madman, as if there were any exempts. The scholar in his library is none. I, who have all my life heard any number of orations and debates, read poems and miscellaneous books, conversed with many geniuses, am still the victim of any new page; and, if Marmaduke, or Hugh, or Moosehead, or any other, invent a new style or mythology, I fancy that the world will be all brave and right if dressed in these colours, which I had not thought of. Then at once I will daub with this new paint: but it will not stick. 'Tis like the cement which the pedlar sells at the door; he makes broken crockery hold with it, but you can never buy of him a bit of the cement which will make it hold when he is gone.

Men who make themselves felt in the world avail themselves of a certain fate in their constitution, which they know how to use. But they never deeply interest us, unless they lift a corner of the curtain, or betray never so slightly their penetration of what is behind it. 'Tis the charm of practical men, that outside of their practicality are a certain poetry and play, as if they led the good horse Power by the bridle, and preferred to walk, though they can ride so fiercely. Bonaparte is intellectual, as well as Cæsar; and the best soldiers, sea-capitains, and railway men have a gentleness, when off duty; a good-natured admission that there are illusions, and who shall say that he is not their sport? We stigmatise the cast-iron fellows, who cannot so detach themselves, as "dragon-ridden," "thunder-stricken," and fools of fate, with whatever powers endowed.

Since our tuition is through emblems and indirections, 'tis well to know that there is method in it, a fixed scale, and rank above rank in the phantasms. We begin low with coarse masks, and rise to the most subtle and beautiful. The red men told Columbus, "they had an herb which took away
fatigue;" but he found the illusion of "arriving from the east at the Indies" more composing to his lofty spirit than any tobacco. Is not our faith in the impenetrability of matter more sedative than narcotics? You play with jack-straws, balls, bowls, horse and gun, estates and politics; but there are finer games before you. Is not time a pretty toy? Life will show you masks that are worth all your carnivals. Yonder mountain must migrate into your mind. The fine star-dust and nebulous blur in Orion, "the portentous year of Mizar and Alcor," must come down and be dealt with in your household thought. What if you shall come to discern that the play and playground of all this pompous history are radiations from yourself, and that the sun borrows his beams? What terrible questions we are learning to ask! The former men believed in magic, by which temples, cities, and men were swallowed up and all trace of them gone. We are coming on the secret of a magic which sweeps out of men's minds all vestige of theism and beliefs which they and their fathers held and were framed upon.

There are deceptions of the senses, deceptions of the passions, and the structural, beneficent illusions of sentiment and of the intellect. There is the illusion of love, which attributes to the beloved person all which that person shares with his or her family, sex, age, or condition, nay, with the human mind itself. 'Tis these which the lover loves, and Anna Matilda gets the credit of them. As if one shut up always in a tower, with one window, through which the face of heaven and earth could be seen, should fancy that all the marvels he beheld belonged to that window. There is the illusion of time, which is very deep; who has disposed of it? or come to the conviction that what seems the succession of thought is only the distribution of wholes into causal series? The intellect sees that every atom carries the whole of Nature; that the mind opens to omnipotence; that, in the endless striving and ascents, the metamorphosis is entire, so that the soul doth not know itself in its own act, when that act is perfected. There is illusion that shall deceive even the elect. There is illusion that shall deceive even the performer of the miracle. Though he make his body, he denies that he makes it. Though the world exist from thought, thought is daunted in presence of the world. One after the other we accept the mental laws, still resisting those which follow, which however must be accepted. But all our concessions
only compel us to new profusion. And what avails it that science has come to treat space and time as simply forms of thought, and the material world as hypothetical, and withal our pretension of property and even of self-hood are fading with the rest, if, at last, even our thoughts are not finalities; but the incessant flowing and ascension reach these also, and each thought which yesterday was a finality, to-day is yielding to a larger generalisation?

With such volatile elements to work in, 'tis no wonder if our estimates are loose and floating. We must work and affirm, but we have no guess of the value of what we say or do. The cloud is now as big as your hand, and now it covers a county. That story of Thor, who was set to drain the drinking-horn in Asgard, and to wrestle with the old woman, and to run with the runner Lok, and presently found that he had been drinking up the sea, and wrestling with Time, and racing with Thought, describes us who are contending, amid these seeming trifles, with the supreme energies of Nature. We fancy we have fallen into bad company and squalid condition, low debts, shoe-bills, broken glass to pay for, pots to buy, butcher’s meat, sugar, milk, and coal. “Set me some great task, ye gods! and I will show my spirit.” “Not so,” says the good Heaven; “plod and plough, vamp your old coats and hats, weave a shoestring; great affairs and the best wine by-and-by.” Well, 'tis all phantasm; and if we weave a yard of tape in all humility, and as well as we can, long hereafter we shall see it was no cotton tape at all, but some galaxy which we braided, and that the threads were Time and Nature.

We cannot write the order of the variable winds. How can we penetrate the law of our shifting moods and susceptibility? Yet they differ as all and nothing. Instead of the firmament of yesterday, which our eyes require, it is to-day an eggshell which coops us in; we cannot even see what or where our stars of destiny are. From day to day, the capital facts of human life are hidden from our eyes. Suddenly the mist rolls up, and reveals them, and we think how much good time is gone, that might have been saved had any hint of these things been shown. A sudden rise in the road shows us the system of mountains, and all the summits, which have been just as near us all the year, but quite out of mind. But these alternations are not without their order, and we are parties to our various fortune. If life seem a succession of
dreams, yet poetic justice is done in dreams also. The visions of good men are good; it is the undisciplined will that is whipped with bad thoughts and bad fortunes. When we break the laws, we lose our hold on the central reality. Like sick men in hospitals, we change only from bed to bed, from one folly to another; and it cannot signify much what becomes of such castaways,—wailing, stupid, comatose creatures,—lifted from bed to bed, from the nothing of life to the nothing of death.

In this kingdom of illusions we grope eagerly for stays and foundations. There is none but a strict and faithful dealing at home, and a severe barring out of all duplicity or illusion there. Whatever games are played with us, we must play no games with ourselves, but deal in our privacy with the last honesty and truth. I look upon the simple and childish virtues of veracity and honesty as the root of all that is sublime in character. Speak as you think, be what you are, pay your debts of all kinds. I prefer to be owned as sound and solvent, and my word as good as my bond, and to be what cannot be skipped, or dissipated, or undermined, to all the éclat in the universe. This reality is the foundation of friendship, religion, poetry, and art. At the top or at the bottom of all illusions, I set the cheat which still leads us to work and live for appearances, in spite of our conviction, in all sane hours, that it is what we really are that avails with friends, with strangers, and with fate or fortune.

One would think from the talk of men, that riches and poverty were a great matter; and our civilisation mainly respects it. But the Indians say, that they do not think the white man with his brow of care, always toiling, afraid of heat and cold, and keeping within doors, has any advantage of them. The permanent interest of every man is, never to be in a false position, but to have the weight of Nature to back him in all that he does. Riches and poverty are a thick or thin costume; and our life—the life of all of us—identical. For we transcend the circumstance continually, and taste the real quality of existence; as in our employments, which only differ in the manipulations, but express the same laws; or in our thoughts, which wear no silks and taste no ice-creams. We see God face to face every hour, and know the savour of Nature.

The early Greek philosophers Heraclitus and Xenophanes measured their force on this problem of identity. Diogenes
of Apollonia said, that unless the atoms were made of one stuff, they could never blend and act with one another. But the Hindoos, in their sacred writings, express the liveliest feeling, both of the essential identity, and of that illusion which they conceive variety to be "The notions, 'I am,' and 'This is mine,' which influence mankind, are but delusions of the mother of the world. Dispel, O Lord of all creatures! the conceit of knowledge which proceeds from ignorance." And the beatitude of man they hold to lie in being freed from fascination.

The intellect is stimulated by the statement of truth in a trope, and the will by clothing the laws of life in illusions. But the unities of Truth and of Right are not broken by the disguise. There need never be any confusion in these. In a crowded life of many parts and performers, on a stage of nations, or in the obscurest hamlet in Maine or California, the same elements offer the same choices to each new comer, and, according to his election, he fixes his fortune in absolute nature. It would be hard to put more mental and moral philosophy than the Persians have thrown into a sentence:

"Fooled thou must be, though wisest of the wise: Then be the fool of virtue, not of vice."

There is no chance, and no anarchy, in the universe. All is system and gradation. Every god is there sitting in his sphere. The young mortal enters the hall of the firmament: there is he alone with them alone, they pouring on him benedictions and gifts, and beckoning him up to their thrones. On the instant, and incessantly, fall snow-storms of illusions. He fancies himself in a vast crowd which sways this way and that, and whose movement and doings he must obey: he fancies himself poor, orphaned, insignificant. The mad crowd drives hither and thither, now furiously commanding this thing to be done, now that. What is he that he should resist their will, and think or act for himself? Every moment, new changes, and new showers of deceptions, to baffle and distract him. And when, by-and-by, for an instant, the air clears, and the cloud lifts a little, there are the gods still sitting around him on their thrones,—they alone with him alone.
